Excussus on the origin of some of the Berber Tribes of Nubia and Libys :-

Prefetory remarks by the Editor of "Ethnological Journal"—Dynologies of the term Enrich—Mr. R. K. Hazmer of New York, 198. in his possession—Digression on Trute and Menged—Drinines of the Enrichment Annaisin, Cadaldan, Park, Nghandaha, and Pathernia of Gen. x— Inquiry into the geography and affiniations of the Enrichment Office. Catalogue of Editopies and Nyirikim names extent in hirrographical records—APPENDE on the historical uniquity of the name BeRBER— POTENDETOR on the monumental analogicy of Emates.

PREFACE.

THE promise made to the readers of the Ethnological Journal having been performed, Mr. Burke's prefatory remarks sufficiently explain the incidents that suggested, in the first instance, the periodical publication of the following digest of American editorial reports,

In compliance with the wish of my friend Mr. James Madden, these pages are now offered in one volume to the student of Egyptology; and I beg leave to append a few personal observations.

The Course of Lectures herein presented, originally formed part of some thirty discourses, distinct from each other, and comprehending the more prominent discoveries in hieroglyphical literature, of which the subjoined eight are but selections. In the process of arranging the Newspaper reports for diffusion in England through the ETINOLOGICAL JOURNAI, I became convinced that some additional Notes were indiscounted to the properation led me insensibly into more digressions than were at first contemplated. Most of these were prompted by a local consideration.

During transient sojourus in my native land, where these studies have hisherto encountered no popular favor, the cut nox of hieroglyphical researches is a query that has fallen incessantly upon my car;—frequently from respected parties whose high education ought to have ranked them long ago among the most ardest of CHAMPULIN'S disciples.

As far as the facilities at my disposal permitted, I have endeavored to answer this interrogatory:—in Notes, pages 33 @ 42, by pointing out the inevitable overthrow, through pending pyramidal revelations, of

above three hundred systems of Chronology, (including Archibishop USINE's in our Authorised Verinos), for ante-Abrahamic ages, hereinfore based upon biblical numeration:—in Appendix D, by attempting to indicate, that oxcooncat. science amply corroborates monumental deductions:—in Appendix D, by abuniting soudry exceptical and other facts calculated to impress antagonists with the possibility, that some of the arguments with which it is all fashionable to obstruct scientific inquiry, or to veil the light of truth, are not perhaps so unassiable as they have been made to appear:—end in a concluding Excursus on Berber already the Chronical Criticism has been partially continued, a few elements for the reconstruction of early African history and geography have been glanced at which may suggest new resources to fellow-shorers.

Controversy in these matters being neither courted nor deprecated, it remains to be seen whether objections, to the general tenor of the views herein advocated, cannot be rebutted through severer analyses, or overcome by a closer grapple: because, whatever may be the popular notion still current in this country concerning the results of Egyptian exploration, those who really know anything about them will cheerfully subscribe to the assertion of De Sauter :—"En résumé, les études égyptiennes sout partout en honneur aujourd'hui. Si elles marchet trop leatment a gré des espirits inquiets qui ac revient a une découverte qu' autant qu' elle est complète, elles marchent arce sâreté; et chaque pas qu' on leur fait faire est assez vigourcusement empreint pour qu'il n'y ait plus à craindre que le mavanis voolin', à défaut du temps, en puisse désormais efficer la trace."—("De l'étude des Hiéroglyphes"—Revue ets deux Mondes, 15 Juin, 1846 j page 989.)

The circumstances under which the desultory Articles that now appear in this little book were prepared, and the effort made to keep its price within general reach, may induce the charitable reader to overlook the many typographical and other blemishes it has been found impossible to avoid. A Table of Errata corrects the grosser errors. No attempt has been made towards literary excellence, because the Lectures themselves are published merely as reported by the Press, rarely adhering to the language of the MSS.; while everything in the Notes has been sacrificed to condensation. Nor will the generous critic expect that one who, taken from England to the Mediterranean at two years of age, has spent thirty-two summers out of his Father-land, during treenty-five of which the English tongue was unleared beyond a very limited circle, should not

be deficient in Anglienn scholarchip:—"car, s'agri il de mon style? je i' demontance. Veut-on s'attaquer à ma personne? ma conscience est i'mon refuge. Est il question dis fond de cet oursge? qu' on entre en lice; mais qu' on prenne garde aux raisons qu' on y apportera."— (D'OLIVET, "Langue Hébraïque restituée;" Paris, 1815; Introduction, page 28.)

Yet, there is one topic on which I fain would dwell, did I not fear that its adequate exposition would make these preliminary remarks loom larger than the book itself.

The peruser of this sequel to my Chartens of 1843, struck perchance with the indefinite length of time berein claimed for Egyption history, nay reasonably inquire, whether researches, founded upon the far more restricted chronology of other Nations, would yield a similar result? I have not the slightest hesistation in replying in the affirmative; because, if no such aggregation of the multiform data, through the critical synthesis of which the primeral history of Mankind can be rebuilt, has hitherto been published, this grand historical desideratum has nevertheless been achieved in manuscript by my excellent friend, M. Henri Venkl, of General, Switzerland.

My avocations during the last three years have been so migratory, that the translation of "Chronos," even with my Wife's effective and zealous co-operation, has not progressed as we hoped when the labor was undertaken; but, inasmuch as the hundred and forty folio pages of the English Manuscript cover the entire ground of human history, so far as modern science has resuscitated it, from primordial spechas down to the days of Carac, I speak confidently in averring, that it would be difficult to point out a branch of this mighty theme which has escaped the venerable suthor's scratifizing attention.

Without having availed myself, in these specifically-Egyptian investi-

^{** &}quot;CHRONOR.—Outline of a Orand Chronological Atlas, presenting the Parallel Histories of the East and the Wort or, a Symptoical and Sprichronous Tabulation of Oriental and Occidental Events, from the earliest times to the death of Napoleon.—Based upon the latest Geological, Occidental, Biblicial, and other Researches, and covering above 400 Pages, folio. Translated from the Author's original and unpublished French Manuscript, and editor, with Annotations, by Gronou R. Giunosc." LECTURES

EGYPTIAN ARCHÆOLOGY.

INTRODUCTION.

BY THE EDITOR OF THE " ETHNOLOGICAL JOURNAL."

THE subject of Egyptian Antiquities has excited for some time past, and is still exciting, intense interest among many of the highest minds of the day; but in this country, the excitement is pretty much confined within the narrow circle of Egyptian scholars themselves. The public has not partaken of it, nor has the knowledge acquired been in any degree popularized. On the contrary, the most antiquated notions still prevail amongst us; so that even in quarters otherwise well-informed, Egyptian discoveries continue to be met by objections which might have been tolerably legitimate some twenty years ago, but which are absolutely ridiculous at the present time. Strange to say, the very reverse is the case on the other side of the Atlantic. In the United States, there is no scientific subject which has, of late, excited so much interest, or on which the public is so well informed, as that of Egyptian Antiquities. And this result has been entirely produced by the energy and enthusiasm of a single mind. When Mr. Gliddon commenced his labours as a Lecturer, in the Winter of 1842, Egypt was not only a land of Darkness to Lecturer, in the Winter of 1842, Egypt was not only a land of Darkness to the American public, but even the literary men of the country, with very rare exceptions, were entirely ignorant of the existing state of Hieroglyphical learning. This ignorance arose not from any want of curiosity or liber-ality, but simply from the fact that American scholars are too much in the habit of deriving their knowledge almost exclusively through English channels, and they could not, therefore, be expected to have advanced beyond their teachers. Mr. Gliddon's labours, however, during six winters, have completely reversed this state of things: the public has been excited to a very unusual degree, and the learned have been induced to go directly to the fountain heads of Egyptian subjects, not only in the works of English Egyptologists, but in those also of France, Germany, and Italy. To understand the nature of this revolution, a few preliminary explanations are requisite.

The people of the United States are very favourably circumstanced, both in character and social position, for transitions of this kind. Their curiosity, literary as well as general, is proverbial. They are usually educated, have less prominent distinctions among them, either of class, or race, than most other civilized nations, and they possess besides a most extensive apparatus of cheap newspapers, and the greatest facilities for intertensive apparatus of cheap newspapers,

Lectures on Egyptian Archæology.

communication by means of their magnificent rivers, lakes, canals, and milnoids. Their intellectual chameter also, which mises from a fine development of the anterior lobe of the brain, with a moderate or small proportion of the concentrative organs, renders them not merely readily accessible to novelties, but also peculiarly quick in understanding all subjects that can be presented to them in a clear and simple manner. Productly is not, nationally speaking, an American characteristic, but there is no people more readily receptive of general information. Friejdocker of alk tunks have, consequently, truths, when presented under favourable circumstances, are received to an extent, and with a readines, elsewhere unknown.

To these circumstances must, in a very considerable degree, be attributed the extraordinary impression which M. Gilddon's lectures have made there. We do not believe that, in England, any amount of talent or enquirement could have produced such results. But we are not the less satisfied that could have produced such results. But we are such the less satisfied that states of the public to which he addressed himself. Mr. Gilddon possesses a very unusual combination of mitualities for the task which he undestook. A residence of twenty-three years in Egypt, an official position in the country which gave him many advantages in the acquisition of knowledge, a personal acquisitance with most of the principal Egyptian Scholars of Europe, and an infantase sequisitance with their works, were circumstances under the contraction of the contraction o

valley of the Nile; the other, all the principal publications of the school of Champollion, with other works usually referred to in the course of the lectures.*

Once placed within a hall thus adorned, the visitor found himself in a new and magic region; the present vanished, and the men, and the events of thirty and forty centuries back arose before his gaze. In such a scene, the most dail coal in or hall to be impressed, the coldest coal toot resist the consigion of entinsiasm. In the Lecturer himself, every thing compired to the contraction of th

By these means, as well as by throwing himself unsessreelly upon the sympatities of the public, Mr. Gliddon experienced every where a most favourable reception. His audiences maged from 200 to 2000 persons, averable to the property of the

the Pharaobs—Plans, geographical maps, topographical charts and paintings, exbiliting the Country and the Architecture of Egypt. In sbort, Disgrams of every kind, illustrating every warety of Egyptian subjects, during a period of human history far exceeding 3,000 years, and terminating with the Romans in the 3rd century A.D.

^{*} The following are the most important sames in this list of authorities: via.— Abelten, Amply-Rarenchi, Biot, Elreb, Beich, Bosoni, Bamen, Barton, Calileand, Champollines-L-Joune, Champollines-Peper, Cherebini, Caliloren, Parche, Calileand, Champollines-L-Joune, Champollines-Peper, Cherebini, Caliloren, Burton, Caliloren, Lamon, Louren, Lamon, Louren, Lamon, Louren, Lamon, Louren, Letton, Lilliot, Limant, Matter, Merce, Nolas, Obbern, Parthey, Foulthier, Perris, Lilliot, Limant, Matter, Merce, Nolas, Obbern, Parthey, Foulthier, Perris, Lilliot, Limant, Matter, Merce, Nolas, Obbern, Parthey, Foulthier, Perris, Lilliot, Limant, Matter, Marce, Lewan, Lamon, Parthey, Perris, Lilliot, Limant, Matter, Marce, Lewan, Lamon, Parthey, Parthey, Lillians, Young, &c. &c., &c. For the cred these works, no less than for all facilities which have made Equipped statistic popular, the American public is private Archinedogical Library in the only one in that country containing a complete series of the works published by the Champollinainin-G-B-E.

^{4 &}quot;Chapters on early Egyptian History, Archaeology, and other subjects connected with Hisrophyshed Literature". New York, March 1845; price 22 cents or one shilling sterling. Obtainable in London at John Wiley's, Aldine Chambers, Paternoster Row; and at Madden, & Co. S., Lendenhall Street. We learn that in five years this little work has reached its twelfth edition, and that 24,000 copies have been disposed of by the American Publishers.

tages of Mr. Gliddon's labours, have been of even greater consequence than the more obvious ones. The information which is has diffused on certain topics, and the works which his recommendations have caused to be widely circulated, have had an immense effect in liberalizing the public mind, and breaking down the religious prejudices which have hitherto been so generally

mixed up with Egyptian subjects.

Such is the state of things on the other side of the Atlantic; it will be some time, we fear, before questions of Egyptian or any other archerology will excite a similar interest in this part of the world. Here, scientific men must satisfy themselves with working ladoriously, and waining patiently, must statisfy themselves with working ladoriously, and waining patiently, be unreasonable to do so, all things considered. Neither do we complain of the tenacity with which most Englishmen cling to their several opinions. This tenacity does not spring citler from illiberality on the one hand, or any obsenses of intellect on the other, but from those light feelings of the national character. For ourselves, we are not prepared to admit that the colucated classes of this country, are behind those of any other in genuino liberality of feeling. If they appear to be so, if on certain subjects they are less greently enlightened, or tolerant than the same class in some other less greently enlightened, or tolerant than the same class in some other less greently enlightened, or tolerant than the same class in some other endurated the same of the country, and scientific men. In France, extending the lengths of the country and scientific men. In France, extending the lengths of the time of the time. It everes a few of fairness special to properly. Let the man of science appears in his true colours, let make he have of furth and purity of intertions manifest, let him show respect to the feelings and conscientious prejudices of others, and advance to the feelings and conscientious prejudices of others, and advance to the feelings and conscientious prejudices of others, and advance to the feelings and conscientious prejudices of others, and advance to the feelings and conscientious prejudices of others, and advance to the feelings and conscientious prejudices of others, and advance to the feelings and conscientious prejudices of others, and advance to the feelings and conscientious prejudices of others, and advance to the feelings

In casting our eyes over some of the reports of Mr. Gliddon's lectures given by the American papers, it occurred to us that some share of the advantages which have attended his labours among our transatlantic brethren might be transferred to the readers of the Ethnological Journal, by the republication of a series of these reports. Mr. Gliddon has politely and readily entered into our views, and has selected for us the reports most suited to our purpose. Those chosen, are taken from the Pittsburgh Telegraph, March 1847, the Mobile Tribune, February 1848, and the St. Louis Era, April 1848. Particular portions have been taken from these several sources, as each paper has not given the same amount of attention to every topic, -In several instances, Mr. Gliddon has supplied deficiencies, and added facts of interest. besides giving a number of interesting notes and references. In their present form, therefore, these reports will give a brief, but correct summary of the leading topics of Egyptian Archeology, with all known discoveries up to the present moment. We are not aware that any similar body of information is before the British public, in a sufficiently popular form to be generally accessible and intelligible. The critical reader will of course bear in mind, that these discourses, as we here present them, are, at the best, mere synopses made by Reporters for the press, with an occasional reference to the Lecturer, or his manuscripts. It will be obvious, that they give but a very inadequate idea of the lectures themselves, when we mention that each of these occupied two hours in delivery. Still they contain a valuable body of information that may be depended upon, and many facts which the mere English reader might seek for in vain in other quarters. It is with great pleasure, therefore, that we avail ourselves of the opportunity of presenting them in

our pages; even though we thereby somewhat depart from our general principle of publishing none but pupers expressly written for the Journal. The series will contain eight lectures, three of which are now presented. The subject will be continued, in our next number, and completed in the succeeding one. Those who have already persued Mr. Gliddon's "Chapters," will find, in the present pagens, several additional facts of great importance, and many improved views of chronology; etc., resulting from recent discoveries.—L. Dates, and the properties of the properties of

LECTURE I.

Introduction: Present Position of Hieroglyphical Discoveries.

Ms. Gussoos commenced with a sketch of the actual position of Egyptical projectal researches. He made effectivence to the pamplet published by him in 1843; "which affording a correct historical summary of hierophyshical discoveries from Yosoo's and Criazvouccos 12 Jurus's en, 1819 © 1823, to the publient solved, and the propositions under discussion in 1842, prepares the attendant on Mr. Gildotor's onli lectures with clear views of the processes through which long-bursed. Egypt has been resuscitated, and processes through which long-bursed. Egypt has been resuscitated, and processes through which long-bursed. Egypt has been resuscitated, and processes through which long-bursed through the processes through which has been been been proposed that European and the processes through which the processes are also as the processes of the processes o

The lecturer maintained, that any intelligent person of cducation, after the same study as one would ineitably have to devote to the acquirement of other dead or living Oriental tongues and graphical characters; with the sid of Champollon's Grammar and Dictionary of Herogylphics; Peyrors, Tatam's and Parthey's Coptic lexicons and grammars; guided by the philogical labors of Rosellia, Liepsilus, Bitch, Bunnec, De Souley, and their colleagues of the see school; and in possession of an adequate supply of Egyptian documents and texts, (all things which are very accessible to the purchaser, if still scarce in the academical, as well as in the public libraries of England, and of the United States) can, at this day, read into English, direct from the hieroglyphids, worse, purasses, and Consecurity Estitences, with perfect certainty.

If the muliated condition of some heavy legends, sculptured or painted on the mins now disaperaring with frightfull mplidity! from the banks of the Nike, or religiously preserved in the museums of Europe; if M.S. writings on crumbiling fragments of Papyri, drawn from tombs anterior to Abrahamic, or coeval with Mossie generations, present from their nature insure perable obstacles to transition and still buffe the cantest decipherer; or if (from deficiencies of pending sequaintance with the primeval language, the HIERA.PJILAEXTOS, or "sucret dongon," resusticated by Leprins, and

The Chapters on Early Ægyptian History, already alluded to.

[†] Thanks to Molausmed All. Consult GLIDDOVS, "Appeal to the Antiquaries of Europe on the Destruction of the Monuments of Egypt," London: Madden and Co., 1841. Parses, "Collections Egyptiennes au Kaire," in the Revue Archéologique, March, 1846: and Amprag. "Recherches on Egypte et en Nubie," in the Revue des deux Mondes, from Aug., 1846, passim.—G.R.G.

now recognized by all hierological students) blanks, which otherwise are seldon more than verbal, still abound in the translations issuing from the press of Europe, and we do not yet know every fact, or the positive meaning of each word, contained in the hieroglyphics, so as to render into English every thing they do say; at least since 1840, we can triumphantly demonstrate what these heretofore mystified records do not say. No longer does science seek in Egyptian annals for preternatural or superhuman revelations. The "Land of Darkness," is no longer dark, save in the loam deposited by her sacred river; and the antique region that to Hebrews, Greeks, and Romans, was essentially the abode of mysticism and marvel-the country around which, more than any other, foreign tradition had entwined the legends of "physical impossibilities," in accounts and tales to this day consecrated by superstition and ignorance, has become to the disciple of Champollion, the most practical, rational, and human in her romantic history, of any portion of the terrestrial globe. The evidences for this assertion would, the Lecturer observed, resile from all these Egyptian discourses.

Thanks to the reading of the hieroglyphics, the relative ages of all the Monuments are known. We also know to what divinity they were consecrated, or of whose king's deeds they record the annals: because the sculptured writings of Egypt are at one and the same time Tableaux and Manuscripts. In the former acceptation, they are pictures explained by a legend, as in pictorial designs of the mediaval period of our occidental history; in the latter, they are M.S.S. illuminated by paintings or drawings, as in the "Illustrated London News" of our present day. With this double key, this duplicate method of comparison and reciprocal explanation, there are few reasonable chances of error in expounding the objects storied on the grander series of Pharaonic remains.

"If we enter a tomb," said Mr. Gliddon, "we see the deceased surrounded by his family, who offer him their remembrances. The-I had almost said Christian-name, the profession, rank, and blood-relationship of each member of the family are written against him or her. The scenes of ordinary life are painted on the walls. Study, gymnastics, feasts, hanquets, wars, sacrifices, death and funeral, are all faithfully delineated in these sepulchral illustrations of manners, which are often epic in their character. You have the song with which the Egyptian enlivened his labour in the field; the anthem that when living he offered to his Creator, and the death-wail that accompanied his body to the grave. Every condition, every art, every trade figures in this picturesque encyclopædia, from the monarch, priest, and warrior, to the artizan and herdsman. Then these tombs are real museums of antiquitiesutensils, toilet-tables, inkstands, pens, books, the incense bearer, and smelling bottle, are found in them. The wheat which the Egyptian ate, the fruit that adorned his dessert-table, peas, beans, and barley, which still germinate when replanted, are also discovered .- The eggs, the desicated remains of the very milk he had once used for his breakfast, even the trussed and roasted goose, of which the guests at his wake had partaken-all these evidences of his humanity, and a myriad more, exist, in kind, in the museums of Europe, to attest their former owner's declaration to us, modern occidentals. athwart the oceans of time and the Atlantic, Homo sum; humani nihil a me alianum pato. But not only," continued the lecture, "do the secues sculptured or painted on the temples or in the sepulchers furnish every detail concerning the Egrybians; they give us the portraits, bistory, geographical names, and characteristics of an infinitude of Asiatic and African nations existing in days long anterior to the Exode—many of whom have left no other record of their presence on earth, and others again whose names are preserved in the Hebrew scrinitures."

We were most struck by the number and variety of the African moses, distinct from the Egyptian children of Ham, who were satist seen,] exhibited in these illustrations; Negroes, ever captives and slaves, Berbers, Abysmians, Nubians, and all the mulatto grades, living in the same latitudes, called by the same names; in short, in every respect, the same anciently as at this day, were pointed out to the auditones.

Turning to the Aniatic Confinent, Mr. Glüddon indicated on his splendid tabeaux, Cananalites, who "were in the land" in Abnaham's day's, it ogether with the potentias of ancient Tyrians, Ammonites, Philistines, Assyrians, Septhinas, and Indogeramich families of 3000 grears ago—and todu us that thereophyshical geography furnished the names of those primeral cities, Ninereh, Babel, Shinas, and the more recent appellations of inhabitonia of Chalabeta, Jonas, balant, and the more recent appellations of inhabitonia of Chalabeta, Jonas, balanten during a property of the computers of the Planzola.

The lecturer remarked that he should return frequently to the subject of Ethnography, and sustain the diversity of the human race with hieroglyphical documents reaching as far back as 2000 n.c., and with plates, skulls, and other data gathered from the researches of his friend and colleague, Dr. S. G. Morton, of Philadelphia.

Mr. Gliddon then spoke of the monumental inscriptions of the Egyptians, and after culogizing the founders of that science to which he had devoted himself, he read the following extract from an essay of the eloquent Ampère:—

"It is not only the hierophysics of Egypt. This country offer subjects of conversation and meditation which no traveltic can entirely neglect, whoever he may be, if he have eyes to see, a memory to remember, and a spinkling of limagination wherevolv to dream. While no he indifferent to the tableaut of unaccountable Nature on the banks of the Nill? At the more of the presence of this people, which of old accomplished another moved in the presence of this people, which of old accomplished such mighty deeds, and now are reduced to misery so extreme? Who can visit Alcandrine, Gatto, the Pyramids, Heliopolis, Thebes, without being moved

^{*} I cannot sufficiently express how much I am inhibated to the brilling strikes of this scoonspilled Scholar in the Rowe de dex Modes. In elegence of selection, securisty of description, and thorough scaquisitunce with Egypt, pharmonic, classical, or modern, they far surpass anything of the kind historic polisitied, and attract my warmest sympathies. This tribute of respect from a much older Egyptian, at o younger Egyptionist, (of the Author personally suthons), who with Mr. at the prompt of the proper of the property of the property

by reminiscences, the most imposing and the most diverse? The Bible, Homer, Philosophy, the Sciences, Greece, Rome, Christianity, the Monks, Islamism, the Crusades, the French Revolution : almost every thing great in the world's history, seems to converge into the path-way of him who traverses this memorable country! Abraham, Sesostris, Moses, Helen, Agesilaus, Alexander, Pompey, Csesar, Cleopatra, Aristarchus, Plotinus, Pacomus, Origen, Athanasius, Saladin, St. Louis! Napoleon!-what names!-what contrasts! * * Egypt, which awakens all the grand memories of the past, interests us yet in the present and in the future: in the present, by the agonies of her parturition : in the future, through the destinies which Europe is preparing for her, so soon as Europe shall have taken possession of her, which cannot very long be retarded : I now that the Isthmus of Suez has again become the highroad of nations, the link which unites the Oriental to the Occidental hemisphere. A country made to occupy eternally the world, Egypt appears at the very origin of the traditions of Judea and of Greece. Moses issues from her; Plato, Pythagoras, Lycurgus, Solon, Herodotus, Strabo and Tacitus enter into her bosom to be initiated in her sciences, religion, and laws. She attracts the thoughts and the tomb of Alexander, the piety of St. Louis, and the fortunes of Buonaparte; and at this moment (1846) the object of the exacperated attention of London and Paris is Ibrahim Pacha,"-Step-son of Mohammed Ali!

Mr. Gliddon, stated that previously to the year 1802, nothing had been done towards deciphering the meaning of the hieroglyphics found in the sepulchres, and upon the monuments of the old Egyptians.-The key to these mysteries was furnished by the celebrated Rosetta Stone, an invaluable memorial of antiquity now in the British museum, which had been discovered in August 1799, by a French Officer of Engineers, between Rosetta and the sca, and not far from the mouth of the Nile. It is a stone of black basalt, three feet in length, and where it is entire, two feet and five inches in width, varying in thickness from ten to twelve inches. It contains three inscriptions, and is triglyphic and bilinguar; that is, there are three copies of the same document, one in the Greek character and language, and the other two in dialects of the Ecyptian language. Of the two inscriptions, one is in Enchorial or Demotic characters, and the other in Hieroglyphics. These inscriptions are a Ptolemaic edict, chiselled at Memphis, in honor of Ptolemy Epiphanes, 196 years before the Christian Era .- (See Letronne and Hincks on the difference of date: n.o. 196 or 197.)

The concluding sentence of the edies, which furnished the key to all the discoveries of the Champollionists, is in the following words:—" That this decree should be engraved on a tablet of land stone, in Hieroglyphical, Enchorial and Greek characters, and should be set up in the first, second, and third rate temples before the statue of the ever-living king.

These words led to the natural inference that the inscription was the same in the three characters, and that the discovery of the proper names in each would give a clue to the construction of the whole.

The Greek inscription contained the name of Prolemy repeated, in its various inflexions, eleven times. The first effort, then, was to discover the places in the Demotic inscription corresponding to these frequent repetitions

of the name of Ptolemy in the Greek .- Mr. Gliddon here remarked that this Demotic or popular mode of writing was not used much before the year 700 B.c.-One group of seven letters was found in this Demotic, repeated cleven times. These seven letters were discovered to compose the word PTOLMIS, giving therefore, seven letters of the Demotic or Enchorial alphabet, from which the whole of that alphabet has been lately deduced.

The decipherer next turned his attention to the Hieroglyphical inscription. Here a cartouche or oval, which always encloses the name of a royal personage in hieroglyphic inscriptions, was found repeated several times. Hence it was concluded that these cartouches contained the word Ptolmis, corresponding to the name thus spelt, and repeated in the Demotic Inscription. The separate letters or signs of this word were, however, for a long time inexplicable. "I will take my oath," said the decipherer, looking at the cartouche, "that you are Ptolmis, but the strange spelling bothers me!"

The idea here suggested itself to the mind of the decipherer, with the suddenness of a hurst of inspiration, that the hieroglyphics in these ovals of names must represent sounds instead of things, and with this hint he slowly proceeded to unravel the mystery. The things engraved, he discovered, were the representatives of the sounds of those letters, which were the initials of their names in the Coptie language. Thus the middle figure in the oval is a recumbent lioness, the Coptic name of which animal is Labor ; hence he concluded that the lioness represented the letter L. The three figures preceding the lioness, he inferred must stand for either Pto or Mis. accordingly as the word was read, from the right to the left, and the three that followed of course for Mis or Pto.

Mr. Gliddon here showed how the decipherer proceeded to determine at which hand he must begin to read the hieroglyphies, which is done by observing the direction of the cartouches, and the position of any animal in the line, and reading from the side towards which the animal is looking. Hence

were obtained the signs of eight hieroglyphical letters, PTOLMEES. A diagram suspended behind the lecturer containing the cartouches of Ptolemy, and showing the transition of characters from the primitive pictorial hicroglyphics, through the pure, the plain, and the linear forms, to the Hieratio or sacerdotal, and thence to the Demotic or popular styles, enabled the audience to comprehend the order in which the art of writing had been developed among the Egyptians. In the royal ellipsis, called cartouche, which contained the name orthographed, PTOLMEES, the figure of a mat, was the letter P, that of a segment of a circle T, a flower with the stem bent O, a recumbent lioness L, the half of a cubit measure M, two tufts of reeds EE, and a siphon S. He also stated that the pure hieroglyphies were sculptured in relief, that is, in raised figures, and that the figures were colored so as to resemble, as nearly as possible the animals and things which they represented. Mr. Gliddon here exhibited to the audience some casts of hieroglyphics which had been presented to him by his friend M. Jomard. The various antiquities of Mr. Gliddon's collection also served to illustrate the different styles of writings, on stone, pottery, porcelain, wood, &c., at suc-

cessive epochs of Nilotic history. Numerous were the examples given of the application of this principle of plonetic hieroglyphics to other royal names. Among them was that of the far-famed Cleopatra; whose portrait, with that of her son Clesarion, was exhibited as copied from the temple of Dendera. We derive our ideas of her beauty from Shakespere and not from history. She was celebrated for her powers of fascination and the splendiour of her court.

Mr. Olidon here pointed to forty-eight portraits of Kings and Queens, selected by himself out of the work of Rosellinis, from a much larger series of the Plannolis. The oldest of these was Anunoph the 1-, the second King of the eighteenth Dynasty, who reigned between the sixteenth and eightent century n.e. Among the portraits was that of Sheahonk, n.e. 0.72°, or Shiak, the conqueer or Redoboam. In Egyptian portraits, allowance should be made for the want of perspective, of which their artists seem to lave had no knowledge. The eyes are not forsebortened, but the pofile is evidently correct. Thus the Phamolis present us with their portraits, back to 3500 years ago.

The lecturer proceeded to read from his pictorial charts of hieroglyphics, the names of revent kings; and by an exposition of the various forms of the name of Raussa III., on the Tablet of Abydos, he rendered the combinations of figurative, symbolical, and phonetic signs clearly comprehensible to his audience; the more realized when he pointed to a splendid pianting, representing Ramses, III., who reigned no. 1500, in his war chariot drawn by two horses, on his timenhant return from his African examplen.

Having thus satisfied his hearers that hieroglyphies are readable, the lecturer glanced rapidly over the main philological, and paleographical results established, since the publication of his Chapters in 1843, by the laborious researches of Birch, Lepsius, Bunsen, De Saulcy &c., and commenced by making, in the language of Le Clerc, the following inquiry: "Who loves not Etymologies? What studious man is there whose imagination has not been caught straying from conjecture to conjecture, from century to century, in search of the debris of a forgotten tongue, of those relics of words that are but the fragments of the history of Nations?" "The sciences of Philology and of History," writes Eichhoff, "ever march in concert, and the one lends its support to the other; because the life of Nations manifests itself in their language, the faithful representative of their vicissitudes. Where national chronology stops short, where the thread of tradition is broken, the antique genealogy of words that have survived the ruin of empires comes in to shed light upon the very cradle of humanity, and to consecrate the memory of generations long since engulphed in the quicksands of Time."

"In the midst," said Mr. Gilddon, "of the darkness which enwrspe the easilier ages of the world, among so many errors and falles with which each nation has encircled its endie, Philology becomes the conducting threat that leads us, if not with extentiny, at least with nethod and probability. What, in fact," he asked, "does General History teach us of the first establishment of manifold, of the relations of men to each other, of their divisions, of the formation of tribes and of their dispersion? Who has followed their noise-less march across the deserts, the rivers and the nonuntian, suiti this network of nations progressively spread itself over the whole earth? One single book, in a few sublince passes, does afford us a glimpse of this imposing mystery,

but limiting itself to broad truths, it proclaims only the primitive unity of the Cancasian races, epitomized in Shem, Ifam, and Japhet, without giving us the history of their vicisitudes. Comparative philology and ethoography," said Mr. Oliddon, "alone remain to us as guides in this pursuit fraught with so loftv an interest."

Great advances, Mr. Gliddon stated, had been made in Egyptian pillology within a few years. As an evidence of the immenso lahor devoted to this subject, he stated that Moritz Schwartze had published a work on it, acopy of which he produced, the first half of the first volume of which contains 2,183 quarto pages!

The Coptic tongue, the Lecturer maintained, is not the language of the thereglyphies, to which it bears about thesaner clutton that our present English does to that current prior to the days of Chaucer. The language called Coptic is that of the Jacobites, from a Christian sect of that name, and is the dialect in which the Christian liturgies of Egypt are written.

Coptic alone will not translate the hieroglyphics. It is derived from the mongrel annalgmantion of many foreign nations—Pernians, Greeks, Libyans, Africans, Jews, Arabs, and Romans, which took place in the later days of Nilotic degradation; but it preserves the roots of the anterior, or so called. "sacred tongue," in which the primeval characters of the hieroglyphics were first written, above 5000 years ago.

Of this primeral or merical tongue about 400 roots have been recovered, nor does its vectobulary seem to have comprised above 600 primitive radicals: but the most carious linguistical fact is, tlat, on the earliest monuments estant, viz: the tombs of the third dynasty, about no. 5000, the letters expressing Egyptian vocal articulations of the enced tongue were only fifteen in number; corresponding to our A, U, B, A, II, B, K, O, San, P, Y, Y, N, A, A, C, Collego, P, C, Collego, P,

The question here suggested itself, how far back monumental evidence will carry this undercloped language. We have no documents of the carlied stays of Egypt, and of the reign of Menes, her first Phansol. We find, however, about 250 years after Menes, the fifteen letters of the old Egyptian in familiar use, whence we may infer that writing was known in the age of that monarch, 3643, a.c. according to Bunsen; but still earlier in all probability.

The emblem of the Scrihe's palette, reed pen and ink-bottle, (see Chapters p. 16.) is found in the legends of the 4th Dynasty, about n.c. 3400, which proves that, in that remote day, the art of writing was already familiar to the builders of the Pyramids.

The sign of a papyrus or scroll, is also seen among the hieroglyphics of the 12th dynasty, showing that the Egyptians possessed books at a period long antecedent to the time of Abraham, or 2800 s.c. (Bunsen) the era of the 12th dynasty.

Mr. Gliddon's Tableau of characters indicated the nature of the transition which took place, apparently between the 12th and 18th Dyn., from the hieroglyphical into the more current, or tachygraphical form, termed the Hieratic or saccretotal.

Besides the Hieroglyphie and Hieratic, there was, as above stated, a third ind of witing known as the Demock, Euchordia, of Pathodographic. This, as abown by De Sauley, was alphabetic, and came into use about the time of Psaumettieus, or say 700 a.e. Prout this time it was in popular use, until suppressed by a Roman Imperial Ediet, and replaced by the Coptic alphabet of twenty-front Greek letters and seven Egyptian additions.*

LECTURE IL

Connections between Biblical and Pharaonic History.

The preceding discourse being intended to establish the fact, that Egypties theiroglophic an Est translated, is well as to afford copious reference to published sources of information, Mr. Glidskon proceeded, this evening, to published sources of information, Mr. Glidskon proceeded, this evening, to present some synchronisms between Biblied listory and the later Plannonic monumentor Egypt; pertinently observing, that fifthe validity of Hirrographylacis and the succeeding Moses, in all those cases where either record refers to the events mentioned in the other; the authenticity of Hirrographylacis monuments in affilis whereon the Bible is silent, and which antedate Moses by twenty centuries, cannot fairly be called in question.

With a few preliminary remarks, tending to impress upon his hencers the importance of hieroelyphical discoveries to the thologian and biblical student, the lecturer turned to Jeremiah xxxv. and 2d Kinga xxv. etc., for the full of Jerusalem beneath Chaldean invasion; aboving by Jeremiah xxxv., 30t. that Palmon, Hophura is the Egyptian King known to sin classical history under the name of Aprics, a.c., 388; and giving a sketch from Greek authors of his decis and times.

Aprice was stranged by his rebellions subjects, but his body was allowed honounable band; all the Tomb of his ancestors, within the precinets of the Temple of Neith (a goddess whom the Greeks called Minera) at Sais, in lower Egypt. "Sais is now," said the lecture, "Sae-Hitagar,"—Sais the Stony—hying in the Delta of Lower Egypt, about two miles from the river an apot to me endeaved by numberless familiar reminiscences—where I have which away not hours, but weeks—and many a time and oft, seated on the summit of the vast cruck brick inclosure which still gurrounds the crumbling vestiges of Sais, I have pondered over the departed visions of her glory, full fancy has conjured up in my minds 'sey, the Temple of Neith, the Tombs of the Saite Dynasty; and then, have I seen the Plannonic city rise from the dust in all her pristine majesty. A lake o'ergrown with sedge, and teeming with whild fow!, indicates the site of the one whereon the priests of Neith performed their annual aquatic processions; no monds of erude and red briek, with

The authorities from whose instructive pages the original portion of this lecture was compiled, when first delivered as Philadelphia in 1846, were Lexystes, "Lattre & M. Rosellin," 1837 — Iddi. "Tolkenbuch der Ægypten." Introduction — and Bexatz, "Ægyptens Stelle in der Weltgeschliche." With an expression of my profound admiration of its invaluable contexts, the reader is now referred to my profound admiration of its invaluable contexts, the reader is now referred to 1845—CILLS.

fragments of pottery, marble columns, granite friezes, and other boxice miclisamposis of departed grantense—mark the polition of the once sturition—proofs of departed grantense—mark the polition of the once sturent period of the proposition of the once start Neropolis. Yet, beyond the strange desolated of the start period of the steep of the start period of the steep of the start period of the steen, there is so little remaining whereon to foster imagination, that ski is rarely visited by the traveller, who follows the beater outer of a more tourist. But that is the very reason why it possesses peculiar attractions, for it serves us of Begyrians, as a game preserve! I taking been there are season for some years, I have netted ducks on Minera's Lake; shot jackals and the ruins of the Sancturny of Neith; claused woders in the commercial part of the city; speared the wild hog where Apries was strangled; and seared the ovil and bittem from the sepulcher of Annais."

After explaining that each Plannoh had two cortowlose, the first called his promuses, genemally symbolic, the second termed his moses, whose elements are phonetic, though frequently both phonetic and symbolic; 3Mr. Gilddon pointed out, in his Illustrations, the Ornla of a Plannoh, whose hieroplyphical name, "Sun, who in his heart rejoiceth," reads phonetically HAPIRE. But the accuracy of the Seriptium I cook was made strikingly apparent when Mr. Gilddon crylained how, after this monarch's rashness toot him but throne and the control of the property of the proposite curse—stath Jelospha, beloid I will give Plancah! "strapply dillilling the prepublic curse—stath Jelospha, beloid I will give Plancah Indipha, king of Egypt, into the hands of his cennies, and into the land of them who seek this life."

Ascending in retrogule order from the later to the earlier times, Mr. Gilddon checidated in what 'manner the enatouches of Planeah NEXO gajan confirmed the accuracy of 2d Kings, xsili, and 2d Chronieles xxxx; while the explusured portains of Nex'os father and mother, and some curious data on the chronological lights derived about his reign from hieroglypical tablest, amply demonstrated the practical utility of times lectures to the biblical student. The portant of "Tarlanks melek-Cush," referred to in 2d Kings, xix, and his linerglyphical name Tatlafakks were produced; and besides other evidences of his historical existence, it is wonderful that, after 2,000 years of peaceful slumber in her Egyptian tons), the "Nusse of the Daughter of King Tarlanks," should now be a mummy at the museum of Floornec.

The portrait of his predecessor, Pharoah So, (2d Kings xvii. 4) givens the same family east of feature so well defined by Dr. Morton, (Crania Egyptinea, Philadelphia, 1844,) as the Austro-Egyptian; and his historical place was identified in the cartonehes of the Ethiopian King Auduman SHEBATOK.

The mention of the word Ethiopian, in connection with the preceding King, and the "Eman-of-Cou" in "2 of Chronicles, xive, led the lecture to digress upon the very erroneous ideas current upon the primitive geographical splication of the man Ethiopia, which, he multivation, in no text whatever of the Dide, setters which, the multivation, in no text whatever of the Dide, setters which is made to the contract of the Dide, setters which is made to the contract of the Dide, setters which is made to the contract of the Dide, setters which is not an expectation of the Dide of the Chapter, and the setters which is the State of the Dide of th

the ludogermanie Greeks; and had a generie and not a strictly geographical application. The Hebrew word is Cesu; and in the Bible it refers exclusively to the dark Cushite Arabs, a Caucasian family. Infinite errors, by attention to this simple fact, would be removed, and Mr. Gliddon said he could produce the highest authority in support of his assertion.

In no instance is this critical distinction more necessary than as respects the conflict between Au and ZwA, who has been confounded by some with Pharanh Osoaxos, second King of the twenty-second dynasty; by others, his vast army been transported, with the case of Solonois magic carpet, from Merce to Palestine, (either rise Egypt or the Red Sea 1) in the face of historical and physical impossibilities. If yabowing that ZwA must have been a call and physical impossibilities. If yabowing that ZwA must have been a best to be a constant of the contraction of the contracti

Long and valuable were the explanations given of 1st Kings, Nr., 25s, and 2d Chrons, Ni., 16, 60 1 vs. whereby Skinlask, the Congueror of Rehobosan, was shown to be the Phannoh SHESHONK of the hieroglyphics. His pottnik was exhibited, logether with the expire cities of Juddah, Mahannian, Betheboron, Megiddo, &c. The lecturer, however, exposed the fallency of those, who, mistaking a passage in Champellions "in-Hertse," have funcied the shield which contains the letters ERUDH-MEIK-K-&h, to be summounted by portrait (I) of Rehobosan, * The face is merely typical of an Ariatic

The evidences of this, and of the historical evils it has engendered, will appear from the pen of my valued friend and colleague in ethnological inquiries, Da. J. C. Norx, of Mobile, in the course of the present year; and will be followed by a paper of my own, defining the ENTROG-EGORAPHICAL Chart preserved in the 10th Chapter of Genesis, on which hieroglyphical, philological, and exegetical researches have combined to throw much light.—G.R.G.

The first definite views I obtained on this important question were derived from personal attendance at Letrometa, "Cours d'Archèclogie, Exprisone," Cultipo de Praces, Nance, L. Janier, 1885. The redden is referred to Warrow, Cultipo de Praces, Nance, L. Janier, 1885. The redden is referred to Warrow, Cultipo de Praces, Nance, L. Janier, 1885. [†] How easily the most extravagant errors are perpetuated, under the name of Seriptural confunctions, may be seen in the pages of a learned Divine, who, taking Champollion's inexact copy of this so-called "Portrait of Richobosam," has actually traced a resemblance between this face and the equally-unknown features of the Savtoux; possibly as portrayed on Veronica's Sudarium; See Wissnan, "Lectures on Science and Revealed Religion," in all citilizes since 1837.—G.R.G.

prisoner, and has the same features as the majority of the 131 (?) captive tribes offered by Sheshonk to the God Amunra. (Cf. Chapters, p. 9.)*

The synchronism of the Bille and the monuments was established at no-071; pirot to which date, Mr. Gildion states, that there is no mealing of the Hebrews in the hierophyshies that will stand the test of criticism; although Egyption history continues to recede, perhaps 2000 years pier to the days of Rehobeam. The Billed does not mention by same the Plannohs (i.e. the Suns, or kings), who were cotempours with Solomon, Moses, Joseph, or Ahraham; and in consequence, it is impossible to identify which of the Egyptian Monarcha he although the multitude of Severeigns of the Egyptian Monarcha he although the multitude of Severeigns establishing synchronisms between Jewish and Nilotic annals, prior to a catallishing synchronisms between Jewish and Nilotic annals, prior to a, or or against the authenticity of the Hehrew chronicles of patriarchal relations with Egyptian.

Among the antiquarian relies in Mr. Giliddon's collection that serve to elucidate each topic, as well as to prove the practical nility of these researches, in furnishing tangible evidences that such persons once lived, is a pottery seal, that hears the name of Sheshonk the 2d., grandono of the conqueore Shishak; and a hocken percelain image which attests that queen Kere-mans, the wife of his fifth descendant, Takelloth 1st., no. 920 (see Gilddon's Chapters; p. 65), had been duly umbalmed—rest he soul if

So copious, important, and novel are these questions, that it is impossible for follow the lecture over the vast field of research for grasps without effor, in his learned discourses. The remainder of his lecture was occupied with a definition of the canonical prayer book of the Egyptians, of which Legainz copy from the Grand Ritual of Truin (a noll of paryrus, satyr-six feet long, hy nearly two hroad), with other specimens, was presented to his audience, containing above 160,000 hicosphylical characters.

The existence of a similar, hut more simple, canonical "hook of the Dead," at the earliest age of which we possess monuments, is proved hy passages, or extracts, from portions of it, written on mummy cases, funeral

^{*} My honored friend, the evadite Professor Mettransuzio LANCI, whose suspendous labors in Before and Arabin literature, of Presigionera dill'internations della Sagra Sertitura, 1845; and Trattato delle simboliche rappresentanza containa stretty unknown in this country, if sufficiently appreciated in the United States, has thrord nobule spon the current reading of the turretter of all Junior Methods, which he considers containey to the grammatical laws of the Helvew deck-lash, which he considers containey to the grammatical laws of the Helvew ville "—through which, in the sense of the city of the regal costs, Granakon is united by the Lancy, "Latter the Methods of the Committee of the Committee Contained to the Committee Com

tablets etc., back to the coffin of King Men-ke-ra of the 4th Dyn., previously to n.c. 3200.

The Paparic Rituals such as that of Lepsius, which is estimated to belong to the fifteenth century B.C., (Messrs. Osburn and Birch deem it far more recent, however,) are of every age since the invention of Papyrus-Paper, (probably long prior to the 12th Dyn.,) down to four centuries after the Christian era; because every Egyptian who could afford it, had a copy buried with him in whole or in part. Mr. Gliddon ingeniously explained, by parallel examples, how, were it still the custom to inter copies of our Scriptures with our dead, and had such a practice been followed for the meagre 1000 years of our Anglo-Saxon history, an archeologist could ascertain onr Creed by the collation of the various perfect and imperfect copies : which documents during this long period, would naturally present all the varieties of language, writing, and typography, faithfully exhibiting the vicissitudes of our literature. Some would be in old Saxon M.S.S., some in the style of Chaucer, others would present Shaksperian characteristics, and others again the colloquial idioms of our present day-whilst all would vary according to their respective ages, in typographical fashion, from the wooden blocks of the fifteenth century, down to the latest improvements in moveable type.

According to Lepsius' preface to the "Todtenbueh," or "Book of the Dead," the literoglyphics of the first portion designated it as the "Sections of the glorification in the light of Osisis"—Champollion, however, terms it the "Book of the manifestations of light."

Briefly, Mr. Gliddon described the ritual, as a collection of poems, hymns, and liturgical prayers, offered by, as well as for the departed Egyptians, among whose ecrements these papyri are found. No translation of the whole having yet appeared, the lecturer merely undertook to give the general tendency of its contents.

Several more or less complete copies of it exist in hieroglyphical and in hieratic writings. It doubtless received various modifications in the course of so many centuries; each age adding or extending some idea, which, in the previous epoch, was less distinctly defined.

This "Ritual," was a formula of prayers and devotional exercises, of which the painted inscriptions on the muomy cases are, generally, extracts. In Egypt, extracts from it are met with upon every object connected with death or religion, precisely in the same manner as in Mohammedan Mosques we en-

^{*} Having made no critical study of the Rixal myself, I have limited my expositions to such passegase are as seatered through the works of the brothers including a long limit political, Jepins, Bunsen, and particularly in Gentus, "Antiquities of Egypt," published Lendon, 1841, by the Religious Tract Sciegir, but my pratical sclators—but the result of the Rixal Sciegious and the Rixal Sciegious Tract Sciegir, but my pratical sclators—who, in 1846, kindly furnished me with a synopical sketch of the styles and order of Munmy-Cases, Sec, and to Mr. CATTERSOLO, of the Royal Sciegir of Hierartors, who with the learned Author's smetion, permitted my persual of Ma. counter passages from the Kurûn, in Hebrew Synagogues extracts from the Old, and in Christian Churches from the New Testament.

It is divided into three parts; the first of which directs the prayers, ceremonies, and offerings to be used, while the body was carried from the embalmers to the tomb.

The second narrates the adventures of the Soul in Hades, after its separation from the body; and the third announces the return of the re-united Soul and body to the celestial regions.

The doctrine taught is, that the body, when embalmed, becomes a statue or type of Osiris, and as such an object of worship. The tomb thus becomes a temple for costly offerings, made by the relations of the deceased to the Deities, through the priestly guardians of the Tomb. The doctrine of the state after death, appears to have been as follows :- During the seventy days that elapsed between death and burial, it was supposed that the soul was extinet, but as soon as mummification was completed, it was resuscitated. It then ascended as a hawk, with a human head, to the new moon, and took a scat in the sun's boat, and after undergoing many tribulations, trials and sufferings, it arrived in the Hall of Osiris, where it was weighed in the balance of Truth and Justice, and received its due award. Among the incidents of this journey was its appearance before the forty-two assessors, each of whom presided over one sin .- To each the soul exclaims in self-righteousness, "Bring forward my excellence; search out my sins!" and states that it has never committed such and such sins, thus ; I have defrauded no man ;-I have not prevaricated at the seat of Justice-I have not made slaves of the Equptions-I have not committed adultery,-Se., Sc.

These forty-two declarations of innocence are equivalent to the commandments of the Mosaie dispensation, differing from the decalogue only in their number and their being so many declarations of innocence, instead of commandments not to sin; and in them the rudiments of the ten commandments can be easily found; but in the "Ritual for the Dead" of the Egyptians, ample evidences are perceptible of the loftiest conceptions; which prove, that inability to express their thoughts, as we do, in Alphabetic letters, rather than the absence of sublime ideas, in spiritual or metaphysical matters, is the chief accusation to be brought against the princeval compilers of this grand Liturgy: for in it are taught the primeval doctrine of the Soul's Immortalitythe laws of embalment-the prayers offered for the deceased-the resurrection of the body - whilst most curious are the analogies to Hebrew literature, as regards the Soul-weighing in Job xxxi., 6, and Daniel v., 27. The confessions of the Soul to the forty-two assessors or grand Jury-men: their similarity in effect to some of the injunctions of our Decalogue; and the just punishment for gluttony, inflieted upon some hapless individual who is sent back to the earth in the form of a "striped pig"-these are things that our readers cannot understand without the Lecturer's Tableaux, and their exposition must be gathered from his oral discourses, which contained abundant comparisons between the dogmas of the Ritual and those of classical mythology.

As early as 1827, Champollion-le-Jeune, Mr. Gliddon remarked, had pointed out the symbolical figures represented in the Judgment-Hall;

showing that in Amenthi we have Hades—in Osiris, Pluto—in Thus, Proterpine—in Oms, Cerberus—in Thoth, Mercury Psychopompus—in Horus, Api, and Anubis, Minos, Eacus, and Rhadamandtus—(names which resolve themselves likewise into Egyptian roots)—and in the whole scene we perceive the original Psychotactis of the Ancients.*

LECTURE III.

The Pyramids: Preliminary Discourse.

Is commencing a course of three Lectures on the Memphile Pyramids, Mr. Gliddon premised that he did not itsend to notice, except very cursorily, the fallacies of Romans, forecks, Hebrews or Ambs, or to cumment all the fanciful and generally pracrile tales of tourists for the last half century. Travellers could scarcely obtain access to any authentic information, in Eggy, respecting the Pyramids, until the formation, in 1806, of the Library of the Egyptian Society at Cairo. We may learn from the rapid and headless manner in which courists "does "thought how they subject which for years have baffed the most laborious investigators, that their opinious in Egyptian matters are seldoor of consequences."

It might be moritifying to our vanity, to find that our time-honored theories have foundations of smad. We often oppose the progress of Truth, when we have to unlearn that which we have been taught. It was the influence of these feedings that persecuted Galitos, and to their action Champollou's discovered over what of grow opposition is been encountered. Truth, but the contract of the contract o

This fatality, the lecturer remarked, is singularly exemplified in the entity clearly of the founders of Hierofocy—for Young, Champellior-le-Jenne, Rosellini, Salvolini, and Ungarelli, have none of them lived to belold the completion of the gigantie worsh they serently undertook. Dr. Richard Lepius is justly termed by the great Letronne, "the Hope of Egyptian studies." It would be unfair, however, not to state that, at the present hour, three are at least a dozen of his colleagues, who in Hierology could advance these glorious inquiries, even were the entinastist Prussian cut down in the flower of his malhood, or doomed to be arrested in his wonder-ful energy.

- * Champollion, "Lettres de Rome," and "Catalogue du Vatican,"—ROSEL-LINI, M.C. III, 502, &c.—But let me refer the reader to the magnificent articles of ALFREN MAURY, entitled "Psychostasic des Anciens," and "Divinités Psychopompes," Revue Archéologique, 1843-5-7."—G.R.G.
- 4 "Un certain pallis, co pallis qui tour à tour almet sans preure oc qui est autra, antituit dans los deux cas, parce qui est cartias, natitité dans los deux cas, parce qui 'ile cénna les plaint de trancher les questions en a'épargant la paine de les examier; co public qui croit aux Onages quandi la viennent de Saint Malo, mais qui ne cruit pas aux Chinois, quand la viennent de Pfein; qui est fermente convariant de l'extrete de Plaranond, et neix pas les rique la laire et l'allemand puisent être de la active familie que le Namerit; ce public gode-monde la teste de la convariant de l'extrete de Plaranond, et neix pas les rique la laire et l'allemand puisent être de la active familie que le Namerit; ce public gode-monde le teste un cont de Castrectatos, tourant plus commande et plus court de siré na découvere que d'ouvrir as grammaire." Anxens, "Recherches en Egypte et en Nubles," first article, Ag. 1844.—O. B. G.

The East, with her stupendous recollections that touch the centle of the word, as this ident touches the enable of the sun, with her vast seas of she wherein are interred Empires and Nations, endures still; and in her bosons, she still preserves the first arigins, and the first traditions of the luman new in history as in postry, in religious manifestations as in philosophical speculation, the East is natecedent to the West.

In proportion as knowledge of the East developes itself, we behold a new universe becoming revealed, and unfolding an astounding civilization anterior to antiquity, which Greek and Roman antiquity had never suspected. It were well that the future traveller, who visits the East with literary interations, would, so far especially as Egypt is concerned, bear in mind the words of an Egyptian priest, uttered 2400 years ago: "O, Solon, Solol: You Greeks are always children, nor is there any such thing as an aged Greeian among you." "Because all your souls are juvenile; neither containing any ancient opinion derived from remote tradition, nor any discipline heavy from its existence in former periods of time."

Mr. Gliddon observed that he was about to bring forward, not what tourists have fancied concerning the Pynanids, but what the master Hierobegists know; and if any one deems his assertions controversible, he would submit the following course of study as the only method of verifying his statements:

 To read the published volumes of Wilkinson, Champollion-le-Jeune, and his brother Champollion-Figeac, with the other authorities of the new school.

 To read Col. Howard Vyse's work, entitled, "Operations carried on at the Pyramids of Gheezeh from 1837 to 1839," with the notes of Birch and the suggestions of Perring.
 To read the recognition of Dr. Loppins at the Pyramids from November

 To read the researches of Dr. Lepsius at the Pyramids from November of 1842 to July, 1843, as far as published.

4. And lastly to visit the monuments themselves.

At the present day, Mr. Gliddon said, it required only the power of reading English for any one to make himself acquainted with all that had been written by the ancients and moderns upon the subject of the Pyrminids, from Herodotta with either the State of the Stat

For himself, he thought he might be allowed to know something of the Pyrmids, as for ten years of the best part of his life he had opened his windows in sight of these monuments, which were at the distance of only twelve miles from him. He began to visit the Pyramids in 1823, and ascended the largest when he was thirteen years of age. From 1831 to 1814 he made periodical excussions to their vicinity—yel algpt for successive nights in the tomba around them, and often for weeks in tents pitched in their slade. His association with different parties had impressed upon his reollated. His association with different parties had impressed upon his reol-

lection some nineteen ascents that he had made, and how many more he knew not. It might be inferred, from the fact of his lawing escorted syventeen deficate European and American Indies to the top of the large-st, that he considered the climbing of them as no extraordinary feat to a nan of common unuscular activity. The details of individual sensations, he remarked, may be different, and have affected, on this porticular subject, abundant scope for pathos, or Bathos; but races are plain stubborn things, and it is only with these but the Champellonists deal. He stated that the assistance of the Anabs, who live in villages in the vicinity of the Pyramids, could always be obtained, and that with their aid the ascent is made with no great difficulty and at a triffing expense. He here pointed to a fac-simile of the Great Pyramid, to show that its ascent could not be very arduous. This splendid painting is about cight feet high, exquisitely colored, and faithfully represents every stone of the N.E. angle of the monument.

The locturer then spoke of many ernoneous statements that had been made in regard to the Pyramids. By some it has been conjectured that they are antesilurian in age, forgetting that four of these monuments are of sundried brick that would have been washed away in three American winters, and much less could have withstood the tempests of the Flood. Best, these bricks are full of Nike shells, which show that the "Sacred River" rolled beneath their site prior to their ercettion.

Their construction has been attributed to the first children of Noal, who built these structures with a view of clevating themselves above the waters of a second Debuge. By others it has been attributed to Jins or Genii. By others still, it has been conjectured that they are of Cyclopian or Tissaio origin—exected by Giants. Early Eastern writers speculated seriously whether the Pyrmisia were not built by Setid for his tomb before the Debuge. They have also been attributed to Ninnod, to the Pali of Hindortan, and even to the ancient Jirish.

Assuming that these wat structures are the evidences of tynanay, arrangence, and impions oppression, a favourist theory has been to make the hapless Israelites the builders; and Calnet has, by an anagram, undernken to prove that Jôness and Anno were only foremen of the work. By some the Tynamids have been made the genantics of Joseph, and by others they have been fixed upon as Joseph's toubt, while not a few have seen in them the sepublic of that Plannah who was drowned in the Ref-Sci. Here Text of the Postcated, for the current opinion that Plannah was drommed. Thallumdic tradition, for what it is worth, on the contary, expressly declares, that, "Plannah trumed to Egypt, and reported the destruction of his Army." (Compare Exed. xiv. and xv.; Ph. exxxvi. 15: evi. 11.) On all these Isnachita questions the hirroglophics are totally selficiate to the second of the se

Now, to clear away the Jewish theory, it is only necessary to say, that the erection of the Pyramids at Memphis, antedates Abraham, the father of all the Hebrews, by many generations; while neither Joseph nor Phamado could well have been buried in above sixty places at once! even if, according to the Text, Jepthaha was "united in the cities of Gilead." (Judges xii. 7.)

The lecturer here referred to his diagrams, and proceeded to show at some length how ridiculous it is to suppose the Jews built the Pyramids.* †

A French writer has put forth a work in which he has thrown away a vast amount of learning and science by undertaking to prove, that the Pyramids were built to prevent the eneroachments of the sand upon the valley of the Nike. (Mr. Gliddon here showed, by his maps and drawings, the absurdity of this theory.)

Now for the objects of the Pyramids.—Generally speaking, these have been deemed atroeiously impious, by European writers of the middle ages,

**In my humble opinion," says YEATES, "the Great Pyramid scon followed the Tower of Bales, and both half the same cossons design." as by the Muslims to this day; aside from the fantasies of Moore's " Epicurean"

Even in 1832, a visitor of eclebrity decused the Pyramida to be usere copieor Indian mythological structures as Benares, and quotes the valid opinion of supient Hindoo Brahmans to support his own private conviction, that the Sarcoplangus in the Great Pyramid was not intended for a munumy, but for "boly water!" An English resident in Egypt, since 1833, wrote a book to demonstrate anotherastically that the Pyramids were constructed solely with a view to "square the circle!" A recent Swedish assent deems them at reservoir wherein the waters of the Nile were particled. The most selvation of the state of the state of the Sarcopi selection of the While it is still maintained that the Great Pyramid, (the materials of which alone would suffect to baild the still yet of Philadophia), was mixed to barried place of the "Bull Apia," or possibly to endurine the last terrestrial relice of a cone.

Mr. Gliddon, in his allusion to the errors current in relation to the Pyramids, read an extract from the Introduction to Carey's Poems by Sir Walter Scott, ("Had the Pyramids of Egypt, equally disagreeable (!) in form, as senseless as to utility," &c.) which showed how impossible it was, only a few years ago, for the most gigantic intellects of Europe to shake off tho trammels of early prejudice and time-honored delusion. He quoted also a passage from the writings of Sir Thomas Brown, (" For these dark caves and mummy repositories are Satan's (!) abodes. Those huge structures and pyramidal immensities of the builders whereof so little is known. . . . Oblivion reclineth semisomnous on a Pyramid. "&c.) We still perpetuate, for instance, the traditionary tales of the difficulty of ascending the Great Pyramid before the smooth casing-stones were removed, forgetting that since the 12th century, a.D., owing to the demolition of its revetment by the Arab Caliphate of Cairo, the surface of this mighty tomb presents a series of regular steps, rarely three and a half feet high, and always above two feet broad.

The cpoeks, the builders and the objects of the pyramids, said Mr. filiddon, had for 2000 years been dreams, fallacies, and mysteries, and to the inquirer after truth in the pages of ancient or modern literature, there was no fact connected with them proved to be true, before the year 1820, beyond the mere fact of their existence. (See Chapters, 1843, page 54.).

The friend and earliest prompter of Cua revolution in hirroglyphical discovery, whose illustries a musis indentified with the trimphical forth acticace which, in contractions with the contraction of th

The Champellionists are entitled to the merit of having expanged from the mental history of man the many absentations not his subject left on accord. Having expressed the wish that in examining this question, we should make use of the plain common sense which distinguishes this age, as it did that the building of the Pyramids, Mr. Oliddon defined the three heads of his discourse:

1. As to the epoch of the pyramids of Memphis. These were all built between the time of Noah and Anhaam in the scale of biblied achronogy, and those of Memes, the first Phavoab of Egypt, and the founder of the first dynasty at Memphis, and the thirtenth yearsty in collateral Egyptian hieroglyphical clironology. Thus all the Memphite pyramids existed and were ancient 2000 years before Christ. All the pyramids in Lower Egypt are 4000 years old, and taking the pyramid of Memis, according to Lepsins' letters, built between 2151 and 2194 years before Christ, as the last of this scrie, the remainder will successively recedue to above 5000 years and.

2. The builders of the pyramids were Miraimites, children of Ham of the Cancaian nace. Whether these people were austechnos or terra geniti, or whether they came originally from Anis, is a question Mr. Gliddon discusse in other lectures, referring in the meantine to-Morton's Zovrruca. (A nucceding lecture will contain a note on the subject). It is sufficient to say, that they were Can caisans, and white men, and Zervrican.

3. In their objects the pyramids were exclusively sepulchral. They represent the tombs of Pharaohs who ruled in Memphis prior to the invasion of the Hykshos titbes, and are, therefore, the sepulchres of a long line of Egyptian Kings who reigned from the first to the thirteenth dynasty of Manetho.

Mr. Oliddon stated that he paid very little attention to the opinions of any Egyptian writers previously to the Great French Work on Egypt, printed at Paris, and the "Egyptiane" of Hamilton, published at London, both results of the French and Beglish expeditions to Egypt in 1798 to 1802. We are to take our departure from the beginning of this century; but even to these works so much has been added, since 1835, by the labors of the Champollion-

• I have been aware, aince the arrival at Philadalphis of Cher. Browner, great work, in July, 1845, a self ill though envergendence with Prefuser great work, in July, 1845, a self ill though envergendence with Prefuser Great Cher. I have been a self-state of the prefuser of the pref

ists, that they must now be taken with many grains of allowance. Travels in Egypt before the French expedition, and descriptions of the pyramids before 1825, saye in the French Work, are rarely of any value to the archæologist.

Before entering upon details, Mr. Gliddon referred to his numerous illustrations, that were hanging around the room. Among those were a panenumic view the Memphitic Necropolis, comprising the Pyramids from Aborcocash to Dashoo, a distance of twenty-two unliest, the original of which was taken for him in 1843 by M. Linaut, Chief Engineer in Mohammed Alf's service; and as beautiful painting of the great Pyramid, which has been enlarged them a likhogmyhic proof copy of a drawing taken on the spot by Mr. E. W. Lane, the accurate author of the "Modern Eversians."

Only the interior construction of the Great Pyramid is seen at the present day, because the beautiful outer casing was removed by the Caliphs. It must be understood that every Pyramid is four-sided.

Mr. Gliddon then described the Great Pyramid. This is built over a hilllock which Broue basilty conjectured to extend to the top of the Pyramid.
Wilkinson estimates the hillock at seventy-two feet, a little more than onesixth of the beight of the Pyramid, which was originally 480 feet perpendicular.—The easing was entire in the days of Herodotus and Dicdons; and Arabistorians tell us that some centuries ago, the Saracceic Caliples of Cairo
took down the outer easing-stones, partly to destroy the Pyramid, and partly
for the sake of the materials. The average loss of surface by this means
is some twenty-there feet, and of height about thirps, in 5,000 years, in 5,000 years, in 5,000 years, in 5,000 years.

The Great Pyramid, like all the others, faces the four points of the compass, with an exactitude data indicates possible acquaintance with the laws of the magnet. The entrance to Pyramids is at the north side at various heights. In the Great Pyramid the nagle of the outside is 51d. Som, the inclined beight 61l feet, and the present perpendicular height 400 feet 9 michess. Some idea of its altitude may be formed by comparing it with that of other monuments. It is fonty-three feet higher than St. Peter's st. Rome, "about 125 feet higher than St. Putzl's in London, and more than twice the

height of the Bunker Hill monument, Boston. If converted into brick, the materials of the Great Pyramid would huild the entire city of Philadelphia!

Mr. Glådom stated, as the only instance of death by a fall from the Pyramid, the case of James Mayes, an English traveller, who committed suicide by throwing himself on the 16th of April, 1831, from the top of the largest. His body rolled from step to step with accelerated motion, reaching the bottom a shapeless mass of labeding matter. With common caution and the assistance of Arah reliables, there is no danner in the ascent or descent.

The view from the summit of the Great Pyramid is magnificent in the extreme, and off-tskind, unique—varying, however, with the state of the atmosphere, the hour of the day, and the different seasons of the year. Dr. Legiss, 'ts said, has eaused a Panosanie view to be taken from the summit of the second Pyramid. Mr. Gliddon hoped that hesides the day view, the Parsianas would add their night seene of New Year's Eve, 1842, when the blaze of bonfires, lighted on the top of each of the three Pyramids, cast a build glare on every side, hirsigning out the energy peaks of the long-descented Manusclea of Momphite Pharnohs, timing that draw wilderness of tombs with a light, emilmental coil Lepisa's vindication of their inmater memories, and leaving the shadows of fluereal gloom to symbolize the fifty centuries of historie night, now broken by the historio-gists; —

"Dark has been thy night,

Oh, Egypt! hut the flame Of new-horn science gilds thino ancient name."

Prefacing his description with Aamer's heautiful specification of Egypt's natural features in that writer's account to the Caliph Omer, and indicating, with his index-wand, the Country on his coloured map, (8 feet by 4), the lecturer presented to his auditors, a comprehensive prespect from the Great Pyramid.

Standing on the summit, now a platform of about thirty-facet square, you are missed above the low Nike about 612 feet, or some offso freat above the level of the cultivated soil of Regrit at that spot. To the West, the cys stretches over the Librapa Desert, which is here on unclustating table-land of limestone rock, on the surface of which variegated pethics and graved of light brown copy, and the surface of which variegated pethics and graved of light brown copy and the surface of the Pyramids, through the Sahara, to the "Scn of Darknes"—the distant Atlantic Ocean.

To the North, breaking away from the hilly angle which is rowned by the Pyramid of Aboconsh, lies the Delica of Lower Egypt—diventified to the left hand with the edge of the desert, and on the right by the Nile, with vertant fields, waving palm trices, poly sycamores, and distant towns—with edinity on the north-eastern horizon rises the Oheliak of Heliopolis, mixed by Scortzsen, above 4000 years ago. Boats, cattle, oppulation, with all the attributes of agricultural rickes, lend a soft charm to the one side, strangely contrasted with the sharp line of desert on the other.

To the East, on the plain beneath you, heyond the strip of sand which intervenes between the hill of the Pyramids and the alluvial soil—a breadth of ahout a thousand yards—your eye sweeps over a cultivated plain, intersected by canals and broken by grey hamlets, to the sacred Nile; while across the rive, flanked with a red giri-stone hill to the left, and to the right, shadowed by the lengthened limestone range, whence were taken the casing-lobeks of the Pyramids, under the brown mountain of the Mokattam, rises "Mustes el-Qakinha,"—caine the inchance—the far-famed "Um ed-Dimpra,"—the "mother of the world,"—and "El Mahrooneb," or the "Guarded Girje," as she is proudly termed by the natives, with her citaded, minarets, places, and gardens, looming at the distance of twelve miles from the Pyramids, presents one of the most plenteneous eard normatic prospectis in the world.

To the South, close as hand, stand the next two large and other small Primains of Chreszb. Beyond them successively arise, along the edge of the desert-rock, the Pyrmainth of Aboosers, Sacchan and Dhaloos—being defended the closest control of the South of above thirty monarchs, whose uncertain names were fee 2000 grean unknown—all in a line of twenty mites: while a little to the left, and stouded from your sight by a rank forest of pain trees, now growing on the allowed elegant policy, overing the halls of the rjudiciary, the colleges of her prienthood, the abodes of her commerce, and the dwellings of the rpoints of the control of the control

At your feet on every side, are the countless sepulchres of above one hundred generations of departed life—and, here, in every stage of descention and deary, do you behold the skulls, and hones, and winding shrouds of some of the noblest of the buman race, whose remote hour of life transcends Abraham's antouity.

LECTURE IV.

The Pyramids, continued.

This Great Pyramid, the lecture resumed, is built over a small hill, forming its nucleus, the stone of which its bulk is composed being limestone quarried from the Labyan hills. It was cased with beautiful limestone, brought from a distance of fifteen miles across the River, and the quarries of Toomia. All Pyramids were originally smooth on the outside. Col. Yspe, who expended \$50,000 in his researches in Egypt, discovered, by digging down, some of the blocks of the outer covering of the Great Pyramid. Each one of these easing stones, Mr. Gliddon said, be had some recollection of having heard an architect who measured them, estimate at eight toost.

The retrical beight of the Great Pyramid (now 450 ft. 2 ftm.) was originally 280 Egyptian eathies, or 630 ftest, and each of the faces was about 740 ftest at the base, making the proportion of the base to the beight as 8 ftm. Mr. Gilddon here exhibited a copy of an ancient measuring-study (a tot, as early as Plazaroh Hor, of the eighteenth Dynasty, or about the sixteenth eather yas.)* froud by M. Parass, 1800 between some of the mason-work when a propylon of Karmen was below up by order of the Pasila. This measure agreed with the eathit by which Scionson built the Temph, and Noah "This ascinit mason's rule was unbequently ecded to me at Cair's by M.

* This ancient mason's rule was subsequently ceded to me at Cairo by M. PRISSE for the choice antiquarian cabinet of Mr. A. C. Harris of Alexandria, by

the Ark; and was the same as that mentioned in Ezekiel xl., 5, and xliii., 13. By this stick every monument in Egypt can be measured.

Mr. Gliddon now proceeded to describe the interior of the great Pyramid, and by means of his splended illustrations much his auditors familiar with the various passages, the great Hall, the King's and Queen's Chambers, the social Well, &c. The principle of the pinted each, at the entaneous, along the control of the proceeding the proceeding of the proceeding the process of the proceeding the process of the promising of the process of the proce

In the side of this Chamber are the openings of two air passages.—Similar openings were found by Col. Years on the outside of the Pyramid; and an Arab discovered that the northern air channel was open from top to bottom, by placing a cut at the outer office and her kittens at the other, shutting them in with stones. The mother soon found her way down, through the Pyramid, to her little family; thus proving that the hitherton mysterious Pyramid, to the "little family; thus proving that the hitherton mysterious was current at Calvo in 1838; but it is not mentioned in Col. Year's great was current at Calvo in 1838; but it is not mentioned in Col. Year's great work, for therein are recorded only the selentific methods of soft great particular alengmas. Perionally to the clearing of these passages the air in the Pyramid van quite sufficiently.

Here the lecturer explained, by Yspa's Plates, the hieroglyphical names found in 1837 on the guarrier's marks existing in the entresols above the King's chamher, which gave the extoneshes of Sikopsho-Cheops; and by reference to "Egypt's Place in the World's History," he showed how it came to pass, some 5,000 versa ago, that froe brigs had built this economous structure.

The former area occupied by the Great Pyramid was 13 acres, 1 rood and 22 poles. The persent area of the base is 13 acres, 2 roods and 3 poles. The perpendicular height is now 450 feet 8 inches, and the inclined height of 16-10. The original amount of masony was about 180,002,000 cubic ft., equivalent to 6,943,000 tons. It was, said Mr. Gilddon to opinion of a practical halder, that if the linestone in the Great Pyramid were converted into bricks, there would be sufficient to construct all the dwelling bosons in Philodolphis, while the granter which lines it, would be the dwelling bosons in Philodolphis, while the granter which lines it, would be free hundred and nineticity part of the Great Pyramid is occupied by the chambers and Phasaces, while all the rest is solf amount.

whom it has lately been presented to the British Museum. A lecture, delivered by me before the "Lowell Institute" of Boston, in December 1854, was devoted to a mondern. Mr. Passance, (Appendix to Vype's "Openations," 3rd, vol., 1842, estimates the length of the Celait on this measure at ft. 1.719; and in a letter, Paris, Jan. 1844, published in the Affencess, No. 854, be has applied it to other Pyramids. See also the valuable symposical table of pyramidal admeasurements, appended by this gentleman to Bersaré "Aggr. Sciller," II, 824, a 274.

• According to Chev. Detects, the latest subority. In a MS, list of all the Cartenders discovered in Egryt su to 1841, composed by sea to Carte, 1859—41, I agreed with LEMONAUST, "Cercuell de Mylerinus," in considering that ROMINIT'S O'AR NO. 2 and 3, were traintions of one and the same king (Slospie, and as such mentioned my comparison of the contract of the Carte of the Cart

Mr. Gliddon next directed the attention of the audience to the record pramid. This appears taller than the Great Pyramid, in consequence of its being built upon higher ground. But the fact is that it is smaller, covering a fittle more than 11 acres. It was opened in 1816 by Belroin. The earlier is is difficult for about 130 feet downwards from the apex, though the Arabia go up. Much of the casing is entire. It was built by Chiphren, Scott 100 pup. Mich of the casing is entire. It was built by Chiphren, scott to Greek historians, but the absence of hieroglyphical data renders its builder's name uncertain. It is, however, older than the Great Pyramid.

The third Pyramid is the smallest of the three, but the most beautiful, and surpasses the others in the magnitude of the stones of which it is composed. Part of the red granite casing, which extended half way up its sides, still remains, but the upper portion having been revetted with fine white limestone, its ancient aspect was parti-colored. Arab historians (see the authorities in Johann, Remarques, &c., "Description de L'Egypte,") designate these three, as the Eastern, the Western, and the colored or painted Pyramid; referring to this, which ABD-EL-LATEFF terms the red onc. Tho destruction of the casing of this stupendous sepulchre by the Caliphs, calls forth the just reprobation of this sensible Mushim; and the lecturer here drew a comparison between the science of the Pharaonic Architects 4000 years hefore the clumsy desecration of the Saracens. He likewise explained Bunsan's proof, that this mausoleum was constructed at two distinct epochs: and showed by an enlarged copy of Bonom's drawing how one Pyramid had been cased, as it were, over the other. It was opened in 1837 by Col Vyse But the Arabs had anticipated him, as he found in it only the broken cover of the King's coffin, (with part of his body (?) now in the British Museum, This cover is of wood, and bears the cartouche of King Men-ke-ra, the huilder. The hieroglyphics on it rend as follows :- "Hail Osirified King Menke-ra, everliving-born of Heaven; descended of Nu-t-pe (mother of the gods), Acsh of Seb-thy mother Nu-t-pe is over thee, in her name (fracture in the wood,) she has made thee to be with (another fracture,) the god chastising thy impure enemies, King Men-ke-ra living for ever:"-(Birch.) The lecturer referred to this inscription in his first Lecture, as an evidence that the ancient Egyptians believed in the immortality of the soul, although this dogma was unknown to the writers of the Hebrew Pentateuch : but see Munk. ("Palestine," Paris, 1845, pages 147 a 150.)

Mr. Gilddom mentioned six smaller pyramids in the vineity of these three, and gaves some names of kings and queens who were burked in them. He terminated his remarks on the pyramids of Gluerech, and proceeded to speak of a large number of others: after presenting his audicase with a full account of Bossar's classification of Manetho's IVth. dyn., no. 2829, @ 2100; with the reservation, that Larster's unbesquent discoveries, while they necessarily carry the cen farther back, would modify the arrangement of this, and furnish the series of the Monarche of the Vth. (or Elephantinite) dyn., he whole of whose lost names having been restored by the execuations made by the Prussian Commission in the private tomba remoth the Observate prop of Pyramids. Vywa and Perring, he stated, have described 30 of these monuments, and Lepsins, since 1842, has found the substructures of 30 more, all within a line of 50 miles, each of them being the sequelate of a king or queen who once lived and regued in Manphis. (See Appendix A, page 283.)

There are 130 Pyramids at and near Meroë in Upper Nubia, which Dr. Lepsiun's recent visit has shown to be of modern origin, not one ante-dating the second century s.c.: and thus the so-called Ethiopian origin of civilization, and the antiquity of Meroë, are monumentally upset. (Cf. Literary Gazette: Borosm, Cairo, May, 1844, page 414.)*

Most of the Pyramids of Egypt are built of limestone; four of them, howere, are of sun-ricio bried. To give some idea of the immense masony of these structures, Mr. Gliddon stated that the weight of the three large Pyramids alone was estimated at 12,895,400 tons; and that the materials Pirathe thirty-nine Pyramids described by Col. Vyae would build 9,814 lighthouses of the size of the Bunker Hill monument (Boston, 221 feet high, containing 67,000 oubie feet of grantic.) The stone of the Great Pyramid alone would build 1,962 Bunker Hill monument.

The word "Pyramid" and its signification admit of some discussion. Grecians scholars derived it from pyr—fire, or pyrae—wheat. Better philologists found its roots in the Coptic words pi and karass. The Pyramids are perhaps referred to in Job iii., 14:—

"With kings and connsellors of the earth, which built desolate places for them-

The word translated "desolate places" is, in the original Hebrew, haraboth—ruins. By changing the binto ss, a common mutation, we have haramoth—Pyramids: (Ewald spud Bussen). The Arabs of the present day call
them Et. Haram—the mins or the consecrated.

*It so happens that I was the first to apply birroglyphical discoveries (contrary to the published view of the Chart-Chuckes, Scientific, Callifators, Horston, Horston, Chemistra, Chemistra, Charter and Charter

Three reasons have been assigned for the peculiar form of the Pyramids.

These are the apparent, the doctrinal, and the occult. Of these the lecturer spoke at some length.

At the conclusion of the lecture, Mr. Gliddon described, by means of a black board and a piece of claik, the mode in which the Pyramids were built. When a King commenced his reign, the first thing done by the Government, after levelling the surface of the rock for the Pyramid's base, was to excavate the chamber intended for his tomb, under ground, with a passage communicating with the surface; and to erect a course of masonry above, which served for the nucleus of the Pyramid, in the following manner:—

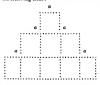

If the King died during the year, the masonry was immediately eased over, and a small Pyramid was formed;—if he continued to live, another course of stone was added in height, and the length of the lower stage increased, thus:—a, a, a, being the new courses of stones added.

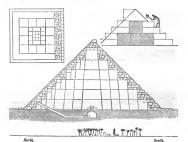

1848, p. 738 to 739.) Without thereby endorsing all the etymologies or linguistical views of the insamed Lauxie, in regard to the sacred former of Egypt, my present in the sacred former of Egypt, my present in the regard to the sacred former of Egypt, my present in the regard of th

During subsequent years the same process was repeated, and the Pyramid assumed in time the following form:—*

*The well known courtesy of Mr. Bonomt, than whom, as the associate of the Prussian Scientific Mission to Egypt, none are more competent to define the principles of pyramidal construction by Dr. Lucretus discovered, enables me to present a woodent, which comprehends the main features of the architectural law under discussion. A few observations will suffice.

The Pyramid. The hase line of the central illustration represents the level
of Memphite alluvium, at high-water mark, say about twenty-two feet above the
low Nile; at which season (May), the latter will here average six feet water over
the hed of the River. [What may be the depth of the alluvial deposit formed over

The Pyramid thus continued to be increased every year until the death of the king in whose reion it was creeted, fresh courses being added each year of his life. When the king died the work of enlargement ceased, and the casing was put on the Pyramid. This was done by filling up the angles of the masonry, a, a, a, with smaller stones, and then placing oblong blocks one upon nnother, so as to form steps, from the base to the apex; after which, beginning at the top, and working downwards, these stones were bevelled off at the corners, so as to form one uniform angle, and give a smooth surface to the Pyramid, leaving a perfect triangle. As each stone of this easing capped the other, so as to leave no vertical joints, Mr. Gliddon culogised the science and skill of the architect who combined a mausoleum susceptible of yearly increase, without alteration of form, with the ne-plus-ultra of durability when completed.

the limestone-rock, beneath the river, it is impossible to guess. I remember that, in 1834, my friend M. Linant De Belletons, in the course of boring at the head of the Delta, about twenty miles below Gheezeh, struck brieks at eighty-two feet to the Detta, about twenty miles below theseens, struck order at eighty-two below the surface of the alluvial.] A Fellah village, surrounded by Palm Trees, and raised upon the customary ancient mounds, just emerges from the Inundation. Behind it, distant shout half a mile, rises the Libyan hill, at the Gheeste-group some 110 feet in height, surmounted by a Pyramid. The one of which a transverse some 110 feet in belight, ammonited by a Pyrandid. The one of which a manierous socioties in one presentide, it sout, of context, a copy of any particular Pyrandii I but principles of all. (Nose but that of Sixcoren has in sepalchard chambers in the principles of all. (Nose but that of Sixcoren has in sepalchard chambers in the restrict apparature of the monument.) The desheet in the reck is the royal at any after stage could be eased over, and become at once a perfect Pyrandi 4, or at any after stage could be eased over, and become at once a perfect Pyrandi 4, or and the first of the context of the outside was reduced to a series of steps, one stone each, whereby to ascend the nonument. Such is the present surface of the Genet Pyramid, since the removal of the cazing.] The outermost layers, or exterior talus, are the renement, of white limestone, finished off smooth on the left side; and here exhibited incomplete on

innestone, manace on smooth of use 4gs use; and nere eximined incompace on the right, to show the method of construction.

[N.B. The slanting walt, within the rubble-work, on the left hand, are introduced to illustrate a variation in the modas, but not in the fave of progressive development. See sections, &c. of the Pyramid of six steps at Saccars, and that of Meydoon, in LEPSIUS, "Ban der Pyramiden."]

2. The APEX of a Pyramid, illustrative of the process of "finishing from the top downwards." An ancient mason, holding the hieroglyphical adze, is figured in the act of effacing the salient angles as he descends. And here it will be remarked, that, inasmuch as each stone of the casing co

and laps over another, no vertical joints were left in the revetment; and the "eternal Pyramid" was impervious to the weather. This is proved by the casing-stones discovered by VYEE at the base of Smootno's Pyramid—and "inter alios," by those of the Siz-stepped Pyramid, alloaded to by Pococcea, and figured by LEPSUS. Two conclusions will strike the observer; first, that a Pyramid, being smooth from its base to its summit, was hy its huilders never meant to be re-ascended; secondly, that the entrance was hermetically closed, never to be reopened; although secondly, that the cattrance was hermetonily closed, never to be reopened; although its location, to judge hy classical and Arishian traditions of hieroglyphics on the exterior, was probably indicated by a royal Tablet, or Stele, commemorative of the Pharsoh interred in each sepalchre. A line of hieroglyphical legends seems also to have been inscribed around the monament, a few feet above it hase: the latter being surrounded by a broad platform, or terrace, figured in the above When Herodotus stated, twenty-four hundred years ago, that the Pyramids were finished from the top downwards, he was laughed at—but he was right. The lecturer expounded the text of Herodotus in accordance with Lepsius discovery.*

3rd.—The mass of a Pyramid; or a horizontal section of the undermost tier of stones. In the centre of the inner square, is figured the first block, around which are successively grouped the stones that attest progressive chargement—followed by the second square, indicative of the rubble-work—and terminating with the outer square, prefectants.

Such are Egyption PTRANIM, the most perfect of mausolea ever conceived by human intellect, or executed by human skill; whether as regards their capability of oxpansion in direct proportion to the length of a Monarch's reign—the heautiful simplicity of their architecture—the coatines, variety, and giganie masses of their materials—their architecture—the coatines, variety, and giganies masses of their materials—their architecture—the coatines, variety, and giganies to this civilized harbariam and not despoiled, at a later age, the reversalse monuments of his civilized

predecessors.

It will now become orident; that, as there was but One Phirmot on the throos at unin, (cynthrois kings being more reports entil the shealt of the sentor; just at unin, etc.) and the state of the sentor; just in each reign; and therefore such Pyramidi to be unit of a Sowreign, whose rule created from "Mighel to Systes," and mas with no others oridenses; for Gazde foreory, to be advanced at a finance opportunity, ju it, it is me ask, the human nature, that is Memphis king, who dowe his general from the Fire Chatenet, and his copper from Mount Siani, railing along a narrow strip of alluvial, hounded on either more is alone (and is now hope as more than the sentence of the sentence

whereby the hypothesis of dynastic contemporaneousness, during the OLD Empire, can be destroyed. No one now-a-days, nist imperitus, pretends to such unhistorical expedients for curtailing the monumental chronology of the New.—G.R.G.

Some Pyramids, like that of MFNKERA, are double—a later Sovereign, for reasons
to us unknown, having chosen to enclose the tomb of a predecessor within his own. This
may occasionally reduce the length of a reign below the standard of the apparent size of
a Pyramid, but is no exception to the general law of construction.

* Hered II., CEXT.—See LETWIN, "But der Pyramiden," pearin; with the plates which prove, that the difference of construction in ones pyramids, La. by stanting which prove that the difference of construction is to see pyramids, II. by stanting the providence of the control of the control

Here Mr. Gilddon made a digression to show that the same leare of construction which had guided the builden of Egyptian Pyrandis, were visible, owing to the great discoveries of Sautza and Davas, in the aboriginal "Mounds of the West," the difference consisting solely in the material. He showed the principles of American Mound-hailding in Olio, on a black-board—adverted to Systler's and Davait's forthcoming work, under the anapieses of our Smithsonian Institute—and uttered a hope that the citizens of St. Louis would coopent in smel a damirbeb researches among our immerable Mounds, one of which had been shown to him by our accomplished follow-citizen, Major M. Lewis Clark, (St. Louis, New Ers., May, 2, 1842.

the stones, is quite mer to me, and merite verry attention a tablough. 1 Inad long heen of opinion, in common with Dra.crus (*) De Cultes Antierius as Idolateir, vol. In. page 283-4741, 1829) and Ilazar, (*) L'Egypte Phransverse and Common and

The philosophical deduction from all this is, that the size of the Pyramids is in direct proportion to the length of the King's region in which it was constancted, having been begun at his necession and finished at his death. Large pyramids indicate long reigns, and small pyramids short reigns. The sixtysine pyramids, therefore, represent some seventy or eighty kingly generations, (two kings having been sometimes buried in the same pyramid), the last of which mee died before Abraham was born. Such is the law of pyramidal construction. Of the innovations in advances in all readows the reader can judge.*

* In the absence of more specific data, chronologists are in the habit (HALES, Alaysis of Chronology, "&c., 1830; tol. i. p. 80;) of accounting a mean of 22 years to a kingly generation. The vagueness of this estimate was pointed out by years to a hingly generation. The vageness of this estimate was pointed out by the learned Partenano, ("Analysis of Egyptian Mythology," &c., 1819; note C., p. 138); who has latterly found it imperative, in order to be consistent with his theory of the Unity of the business species, to renounce the factions limits of hibbical chronology in toto:—"there exists," searest this acute and dispassionate errite, "according to my hypothesis nordereadegy, properly so called, of the exriset critic, "according to my appetiests no correlating, property so called, of the earliest ages, and that no means are to be found for ascertaining the real ages of the world." (Price ann., "Besearches into the Paysical History of Mankind," 1847, vol. v.; Note on Biblical Chromology, p. 595, 570. Compare, also, Krastacc, "Primeral History," 1846, p. 57, a 63.) 'Under this view, however, the ethnological inquirer is presented with a Gliemma, either born of which is askward to bis orthodoxy. because, if grounded on the mythos of Adam and Wee, he contend for Unity of Race, he must abandon "plenary inspiration," and with it genesiscal chronology in any text or version of the Pentateuch: or, should he advocate the inspired authenticity of Hebrew, Greck, or Samaritan numerols for anto-Abrahamic ages, he must (in the face of incontrovertible facts conceded by PRICHARD himself, which show that, within human record, neither time nor climate has ever transmuted a Cancasian into a Negro, or vice verse; abandon the hypothetical primitive Unity of the now-diversified species of mankind. This, "en passant;" the object of the present note being to indicate, that, leaving aside the double pyramits, (that is, where one king, as in the instance of the third, or MENKERA's, has enclosed the tomb of a preceding monarch within his own,) if to the Sizty-sine Pyramids, (LEPSIUS, ubi supra,) each the sepulchre of a Pharnoh, we allow the mean of 221 years to a regal generation -69 × 221-1541-we obtain a round sum of 1541 years, as the length of the Pyramidal period. And, inasmuch as these monuments, their sizes being commensurate with the reign of the Sovereign each respectively represents, ranged necessarily from about 60 to about 480 feet high, as a minimum and maximum, the above 15 centuries have to be distributed in proportion to the bulk of each pyramid; some falling far below, others greatly exceeding the average of 221 years to a royal generation.

If we take the two largest Pyramids of Gbeezeh, the first and second, as our maximum, and refer to the historical lists for the length of the reigns of the kings

APPENDIX A.

This great fact, viz., the discovery by the Prussian, in 1843, of some thirty more Pyrussids, ranks, together with the long catalogue of "unplaced" hut ante-Abrahamic kings, among the paraliposeus of recent English obronographers, whose contracted systems, if superlatively orthodox, are nevertheless, in the words of Volexey as rendered by Bancceut, "petitioni di principit, gindizii senza dis-

buried in them, we obtain a standard, vague and uncertain it is true, and at best hut a mere approximation, whereby to measure the gross amount of regal life represented in zeroral by a Pyramid; thus.—

The lowest of these canons, that of Eratosthenes, yields us more than 22\frac{1}{2} years for the hailders of these two Pyramids; while the others, among whom Marstrue's is ever the safest authority, give us nearly treble that amount: which, if we dnly consider the enormous masses of these tombs, is by no means too little for the labour, time, and expense of their construction.

Taking these monstrous edifices as the standard of time, a survey of Vax's Plates will show, that while some small Pyramids represent the lives of kings who reigned, say from one to five years, the greater number will average between fifteen and twenty-five years; and a few, such as the two largest of Dutholo, require an amount of time approaching those of Sournis I and II.

An architectural calculation, based upon the masony of each pyramid, and the distances where such materials as the Cravate (from Spee, 66 of line of 0), and the drabbat Limeshage (from the quarties of Tooria, distant some twenty), evens the drabbat Limeshage (from the quarties of Tooria, distant some twenty), evens the drabbat Limeshage (from the quarties of Tooria, distant some twenty), evens the covered by Limeste are yet supplisheded, it is vain at present to estimpt their comments of the covered by Limeste are yet supplisheded, it is vain at present to estimpt their comments of the covered by Limeste are yet supplished, it is vain at present to estimpt their comments of the covered by Limeste are yet supplished, it is vain at present to estimpt their comments of the covered by Limeste are yet to the covered the "Dangestant," which is the covered by Limeste are the covered to the covered their covered to the covered to

The pedigrees of private individuals, and the genealogical legends (among them, the kings of the lost Elephantinite, or 5th Dyn., suppressed as consemporarous by Berssey,) discovered by Lersut's in the Mamphite Necropolis, will check these calculations.

A period of 1076 years for the duration of the Old Empire, according to the

A period of 10ts years for the duration of the Old Lompire, according to the 38 kings of Entotwhenes, is that selected by Bunsen, "Agyptens Stelle, III." p. 122.) although the same crudite Egyptologist shows, that Manetho's estimate for the Pyramids was "thirteen centuries in round numbers:" ("Egypt's Place," p. 133, 134.)

The "thirty more Pyramids," discovered by Lepsius, (see appendix A.) having superseded that computation, the indulgent reader will believe, that when, in round numbers, I take Fiften Centuries for the Pyramidal Period, other facts are in reservo for their support.—G. R. G.

A gratifying rencontre with Dr. Lersutes himself, during his visit to London, August, 1846, supplied me with a copy of his pamphlet, "Uber den Bau der Pyramiden," being a sketch, illustrated by plates containing sections, &c., of his discovery of the "Construction of the Pyramids," dated Cairo, May, 1843.

To this ingenious and most important essay I refer the reader, limiting myself now to an extract from the manuscript, and, I grieve to add, still unpublished translation made by Mr. Hitt., of the R. Soc. of Literature; for the perusal of which, in the summer of 1846, I owe this gentleman my warm acknowledgments.

The first paragraph, after remarking that Mr. Perauso's researches, 1837-39, were restricted to the more prominent of pyramidal vestiges, asserts, that the Prusian Commission, over the same field, in 1842-3, had gleaned the sites of "Thirty Thirty and the sites of "Thirty and Thirty a

OTHER PYRAMIDS, entirely unknown either to him (Mr. Perring), or to any preceding travellers. Of these, not a few are of very considerable extent, hearing evident traces of the mode in which they were raised, and surrounded by the ruins of Temples, and extensive fields of tombs or hurial-grounds. All these Pyramids, without exception, belong to the ancient kingdom of Egypt before the irruption of the Hykshos, who invaded lower Egypt about the year 2000 n.c.; and the whole of them were erected (those at least between Ahooroosha had Dashbor) by kings who reigned at Memphis. To the same period belong also the majority of the effaced tomhs, of any importance, which surround them, which is evident from the fact that, at a later period, the richest and most honorable families of the country, who could display greater magnificence on their tombs, no longer resided at Memphis, but ut Thobes, which was also the regal residence

If, then, to the thirty nine pyramidal tombs figured in Vysk's work, the reader will add these thirty newly-discovered substructures, the upper materials of which were used as quarries possibly by the Hykshos and the Restoration, but certainly by the Arah Caliphate and the present "Re pastori," (see my Appeal to the Antiquaries, &c., London, 1841, pages 133—4—5,) he will perceive, that in Lower and Middle Egypt there are still extant at least sixty-nine royal sepulchres, which must represent the funereal habitations of more than sixty-nine kings and queens of the Old Egyptian, or ante-Abrahamic empire; because some Pyramids ("inter alios," those of Shoopho and Menkera, of two Inclines, and of Six Steps,) are the tombs of at least two sovereigns; for it seems to me demonstrable, from the laws, objects, and essence, if I may use the term, of pyramidal construction, that no queen was buried essence, i. a may use ino term, or pyraminal construction, that no queen was buried in a separate lyramid, unless, like Amense of the XVIIIth day, the ruled alone, either as a widow, or in her own right, as did Nirocats of Vith dyn, (Cf. Mastrifo, second dyn, sub nomine Biberus, apud Core or Bussens): the Pyramids being, according to my view, of successive, and never of celtuneous erection. The proofs of the validity of this doctrine have been copiously detailed in my American lectures since 1843.

These are stubborn facts that nullify all astronomical and cyclic theories, when applied to human primeval history (vide Letaonne's exposure of their general space to nutuate primeral insteady (vine Letrioness exposure of their general falsays, nowlithstanding their endorsement by Newvoo, Durrus, or Blor, in Newpresentations Zodincales, Taris, 1846, by the learned author of "Egyptian Chronology analyses" by whom the existence of sixty-nine Pyramids, as well as of all the "Upplead Kings," is complacently dodged, and this is the reason why, saids from other critical objections to the historical value of this is the reason why, saids from other critical objections to the historical value of the complex of the com Eratosthenes' Laterculus, while grateful for the author's skilful restorations of the text, I have not adopted Chevr. Bunsen's ingenious hypothesis (Ægyp. Stelle, vol. ii., p. 340, et seq.) that "the great Pyramids correspond with the rulers of the Old Empire in Kratosthenes;" simply because thirty-eight Sovereigns could not have been eligibly entombed in sixty-nine Sepulches; "thirty more Pyramids" having been discovered by LEPSIUS, since "the finishing stroke was put to the second book in December, 1842."-(Ibid., Preface to Eng. Ed., p. xv.)

Incredible as it may seem, no one has actually counted the Pyramids, prior to Lersus' visit in 1843 !

Thus, of the ancients, Herodotus speaks of hut three; Diodorus refers to six; Strano alludes to "a great many;" PLINY, with a threnody at "regum otiona et stults ostentatio," so hecoming in a Roman, describes three; but happily adds, (inasmuch as it proves the contrary, viz., that some Pyramids had been already mutilated, others destroyed, and their superstructures removed prior to the Christian era,) "there exist traces of a great many which are but commenced." Pomponius MELA, in referring to three, leaves the render to infer the existence of others. The Muslim historians, excepting And-EL-LATEEF, who speaks of "the great number," annum metodinus, excepting Actionary 2008 (1998) and the free immere, rarely grafify their love of marvellosanesso in over than three; while, of European and modern Nyrmidographers, from Grazvas down to JOARLO, and still later to WILKINSON, (* Modern Egypt and Thebes, * 1843), none have attempted such a specific enumeration as Panniso published in 1842. (See also his admirable Table of Tyramidal Statistics above quoted, in BURNES, Egyp. Stelle, 1843).

Bewildered by these inaccuracies, and never having thought, during frequent Bewilderen in the Memphite hural-ground, of counting these muscles myself, the non-reception of Vxse's 3rd volume, when I published at New York in March, 1843, threw me upon memory of the localities for the number of Pyramids from Aboorooùsh to Dashoòr; and in my Chapters, p. 57, I roughly estimated " somo twenty-five Pyramids and Pyramidal tombs in the cemetery of Memphls," drawing

sundry chronological deductions from that number, p. 57-8.

Thus calculations are erronous, solely in being too limited; for PERRING'S Appendix to Vrse (received by me in June, 1843), enumerated thirty-nine Pyramids; and subsequently LEPSIUS, hy adding thirty more, furnished sixty-nine royal tombs, in lieu of my estimate of twenty-five, without averring that the sand and debris may not conceal the traces of others. On amending my calculations, in after lectures, a multitude of processes, many of which, from ignorance of Egypt as a country, have been disregarded in accounts heretofore published, have led me to constry, have been unsergated an accounts neverther plants, never the massume a period of about fifteen centuries of human life to be attested by the Pyramids, without absolutely defining when this period ends: although if we accept a series of Hykshos irruptions (Phennien, Arnhan, and possibly Indogermanic,) into Lower Egypt, as the only legitimate method of reconciling Hebrew traditions with the Miller of the bit consideration for the contraction of the contracti with the silence of the hieroglyphics, a period from the twenty-third to the nineteenth century, B.C., for this cossation, appears to me to be historically probable: while for the ante-Pyramidal times of the occupation of the Nilotic Valley hy Asiatic nomads, as well as for the appearance upon earth of humanity in general, I hold that we possess as little chronological data as science has hitherto elicited from paleontological remains: nor can any approximation be reached until some future geologist shall measure the alluvial deposits of the Nile or the Mississippi. [In the act of correcting the proof-sheets of this note, a letter from an American Savan, Dr. J. C. Norr, informs me that Dr. Dickeson, in a recent paper, gives geological testimonies that the Delta of the Mizziszipri has not been less than 14,000 years in its formation. The geological antiquity of Egypt will be tonched upon in the snoceeding discourses on Mananfeation. —27th Nov., G. R. G.]

in the succeeding discourses of blands places as their ingensity, and favorite Short chronologists can explain away these facts as their ingensity, and favorite habit of suppression, may suggest; but, until Dr. Leffstrs puts forth the still unknown treasures in his possession, whilst I deem the yet rough-haven dernonlogy of the "stone hooks" of Egypt to have annihilated all Janish cahalistico-astrologists. or the "stone moons" or Egypt to have annuments in Jerith Canning Control-gical numbers of expectation of the three states are of Annumer of the from the host of hibble Esceptists from Electmons to ID WETTE, to no very familiar, "A Vindication of Protestant Principles," by PRILEXPETRIES A SOLI-CANCE, London, 1847, pages 137 to 146), I am fain to confess, notwithstanding the herculent albors of Diverser, that "the seaked of this part of the subject requires the necessities a careful re-casting," in November, 1848, as much as in 1843, when Birket wrote his preface to Part 2nd of "Gallery of Antiquities in the British Museum." The generality of writers who, since Rosellini's demise, have put forth precise systems of Experim Chronology, have proceeded upon the presumptive anthenticity of Greek lists, in an effort to adjust their mutual contradictions with Judaico-Chris' inn cosmogonies, instead of re-hullding the edifice of Pharaonic antiquity, cartouche by cartouche, and still more indispensably, monument by monument, in accordance with the geological and topographical features of the country itself, and the laws of archeology; through which the current notion of the phyitself, and its an area of the state of the SOURTASINS and ARRESULES OF THE ALLE STREET OF THE RESERVENCE OF T

gitator, without the slightest regard to their respective monumental relations; and the genealogical tablets and papyri are curtailed or extended " a coup de plnme;" without taking into account the names of numerous kings, edited and unpublished whose stone-records bear witness that cach "lived, moved, and had a heing" in the valley of the Nile, as surely as Sheshonk, Thormes, Sesourtaeen, or

Science at the present day requires, what there is every reason to presume it will receive from Larstus, a chronicle of Egyptian Pharaohs from the hieroglyphics and monuments, just as if Hebrews, Grecks, and Romans, imbued with Chaldaic, Hierosolymite, and Alexandrian scholastic dogmata, had never foisted their cosmogenical speculations, cyclic concordances, or synchronising artifices, upon the indi-genous and independent annals of a country of whose language, (with the exception of the since-emasculated Manarito, and possibly Eratostheres,) not one of these classical worthies seems to have understood a syllable, any better than HERODOTUS when he rendered PI-ROMI, the-man, hy καλος κ'αγαθος! (Lib. II., Sect. 143but vide Kenner, "Egypt of Herodotus," 1841—Note, page 185.)

Prior to the Christian era, the very date of which is it of a disputed point, (see

Chapters, p. 33,*) theological controversy had not intruded itself into scientific inquiries regarding the length of time man has inhabited the earth, equally unknown soon years ago to the builders of the Pyramids as at this hour to nurselves. "Each nation, whether Greek or harbarian (says Diodont's), has foolishly pretended to have been the first to discover the comforts of human life, and to have preserved the tradition of its own history from the very origin of the world." This is the third axiom laid down by the founder of historical criticism, the Neapolitan Vico, whose work, if a hand-book to every continental authority, seems quite for-gotten by English historiographers: ("Scienza Nuova," 1725—traduction Mr-

CHELET, Vol. I., p. 337-IL, 1).

It is this inveterate habit of suppressing monumental facts by "modern Chronologers" which still renders applicable the lament of R. PAYNE KNIGHT:-" They are, however, too apt to confound personages for the sake of contracting dates; which being merely conjectural in events of this remote antiquity, every new system-builder endeavours to adapt them to his own prejudices; and it has been the fashion, in modern times, to reduce as much as possible the limits of ancient histhe testion, it mover to most, to rectice as more as possible the initial of ancient nitrory, whole religion, and even dynamical (compare Egyptiva (Chowsday analysed, Porty, whole religion, and even dynamical (compare Egyptiva (Chowsday analysed, Political States)). The state of the dash of a pen, notwithstanding the obtainst evidence of those astependous mounteests of art and labor, which still stand up for their defence." (Inquiry into the Symbolical Language of Ancient Art and Mythology—London, 1818—Sect 101 142—Soc. of Dilettaint, vol. II, 1835.).

The critical reader is requested to transpose the passage into the subterranean Chamber from the left to the right hand; and by reading "North" for "South," the error will be corrected.]-G. R. G.

LECTURE V.

The Pyramids, Concluded.

THE introductory remarks to this discourse set forth, that the initial point of the Pyramidal era extended so far back into the darkness of primeval ages. that its commencement is unknown. When the building of the Pyramids began, the arts and sciences must have been in a high state of cultivation, otherwise such structures could not have been built. The riches of the country, and the peaceful character of the inhabitants, tempted the Hykshos from the East. Their invasion may be compared to that of the Roman Empire by the Barbarians. The Hykshos seem to have ruled in Lower Egypt from the days of Abraham to that of the "Pharaoh which knew not Joseph." It is probable that the kings mentioned in Genesis xiv., from whom Abraham rescued Lot, were Hykshos; which led the lecturer to explain, by biblical passages, and by Josephus, that the sojourn of the Israelites in Egypt being comprehended in the Hykshos-period, when the oppressed Egyptians built no monuments, it cannot be reasonably expected to find hieroglyphical annals of the events that occurred from Abraham down to Moses. Syncellus (a poor authority,) says that Joseph was prime minister to Apophis, a Shepherd King; and it is clear, from Rosellini's explanation of Gencsis xlvi., 32-34, and xlvii., 3-6, that the king then on the throne of Memphis was a "Shepherd," who had arrogated to himself the Egyptian royal title of PH-RA, the Sun, the original of our word Pharach. He showed by Exodus i., 8, that a change of dynasty must have occurred in that day; which verse marks the expulsion of the Hykshos invaders, and the return of the Egyptian monarchs from Thebes to Memphis; thus indicating the commencement of the Restoration under Amosts or Aahmes, founder of the eighteenth Dynasty, the portrait of whose son, Amunoph 1st, he also pointed out in his Illustrations-although the original lived some thirty-five centuries ago ! He urged our citizens to place the works of the Champollionists in our public libraries.

The "Pharaol which knew not Joseph" acose in Egypt about 1600 @
1800 years a.c., and drove out the shepherd kings. The era of the Restoration, under the 18th dynasty, commenced with this king. It continued
until the invasion of the Persians, a.c. 525. This later period has an
almost perfect monumental history.

The several periods of Egyptian history may be divided as follows:-

1.-The ante-monumental period.

[This of course is an utter blank in Chronology. Science knows not where geology ends, and humanity begins; and the definitive, or artificial systems, current on the subject, are of modern adoption and spurious derivation.]

The pyramidal period.

[Occupying, according to Mr. Gliddon's view, about fifteen centuries; probably beginning with Manetho's second dynasty, and ending with the twelfth or thirteenth, about twenty-two centuries prior to the christian cra.]

The period of the Hykshos.

[There being no monuments for this period extant, with the exception

of the names chronicled long after on the "Chamber of Karnac," (Planse, "Notice sur Is Salle det Ancetra de Thouthur \$111.") 1845, here is the grand difficulty in Egyptian chronology; it being impossible to determine its dumino; which Mr. Gilddon considers to be far shorter than is estimated in the "Agrypton Stelle in der Weltsgegebeichte," and to combene all erriptoral connections with Egypt from Ara max to the Exodus inclusive; on which the kieroglyphics are unterly silent, "

4. The positive historical period.

[Commencing about 1600 to 1800 years before Christ, with the New Empire and the Restoration, after the expulsion of the Hykshos tribes, under Aamses, the founder of XVIIIth, dynasty.]

The lecturer went on to explain how and why during their sojourn at Memphis, (if they were there at all) the Hykshos broke open and descerated

It may be useful to the reader to have other references before him, and the
following is clipped from the Philadelphia Public Ledger, November 19th, 1846;
 which paper, under the caption of "Lounges in Mr. Gliddon's Lecture-room," gave
synopses of other discourses:—

"Notified interest measurements are designed to the decements more recently desighered. Among these are the "Ancestral chamber of Karney," and the General Papyras discovered by Champoliton in the Massem of Turrin; which, having been in part desighered by Dr. Lepias, Mr. Berch, Dr. Hincks, and the Genalter from the mythic rigin of the Gots, down to the Ramessides of the nineteenth of dynamy, about the Gots, down to the Ramessides of the nineteenth of dynamy, about the Gots fourteenth century so. The length of each reign and the sum

of each dynasty, were once extant in this precious chronicle.

"Reference was then made to the chromological views contained in Banners' work. [Egggs, & Keffe, III., pages 1923—3]. Bannet divise Egyptian bittory into three great engines, the odd, the made, and the rena.—The old begins with Bonne years. The middle engine includes some of the enginest engines with Bonne years. The middle engine includes some of the enginest enginest relating to Egypt, and embraces a period of \$99 years. The new langdom, beginning with Egypt, and embraces a period of \$99 years. The new langdom, beginning with the engine of \$90 years, the new langdom, beginning with the engine of \$90 years, which will, according to Bannen, place the Christian era in a period of \$29 years, which will, according to Bannen, place the enrich was at the distance of \$245 years, which will, according to Bannen, place the enrich year various discrepancies among Biblical chromologists, stated that the antients between the enrichment of the en

Deteror it can assum any negree of securacy.

In the Appendix to the 10th & 12th editions of my 'Chapters," 1846, I mentioned that Larsitus' forthcoming "Book of Kings," would carry the era of Menes some centuries scalier than B.C. 3643. It has not yet issued from the press, but I hear that Dr. Larsitus places Menes about thirty-nine centuries B.C.—G.R.G.

† Who are the Hybbart A lecture of the course delivered at Boton before he Lowell Institute, "(reported in the Evratue Tansasparry, Normelre list, and Minata, "trib Arison Lista"), after recapilitating arrican theories the following amount moving the following amount—in a investigating the early thiotopy of the world, the Hybbane cross our path like a mighty shudow, advancing from native seats to which is their the operaprity of minigipity to using a deep option, covering to which is their the operaprity of minigipity to using a deep option, covering the term of their arms and the remove of their conquests, and as tength vanishing with a mystery out to that of their first appearance". (Wh. Illanitoro Gazz, than removed my difficulties) and, as a more matter of argument, it would be in difficult to me to usuation that the Hybbane sace excepted lower Egypt, or that they

the Fyrmmida. After that, the mode of burial was changed, and the kings, subsequent to the Restortion, were barried in tombs at Thebes instead of Memphis, in concealed subternatean galleries; in lieu of reputches, like the Pyrmmids, report to view, and from the Hyksho-edy to the present hour inviting curiosity and spolation. His description of the localities at Memphis and the state of the contraction of the contraction of the contraction of the modelshe.

Mr. Gliddon proceeded to give some account of the wonderful discoveries that had been made in the tombs of private persons scattered around the regal Pyramids, coveral with the erection of the latter; and alluded to the arts and seiences which were painted on their walls. Lepsins, 1843, opened 106 of these tombs, and found in them a vast number of paintings, which repre-

were some there at all as others besides appell have unspected.—(Illuster, "On the Letters of the Hierochypical Alphabett." Thank It, Acad vol. xxi, part II, 1417, page 35.) The latter view night result from a rigid inquiry join to wilding to the historical sources; the total absence of direct allusion to be wilding to the historical sources; the total absence of direct allusion to surable historic properties, and the properties of the surable surable historic properties. The properties of the

tical, but let not the sticklers for the short chromology triumph or that account. I presume that the most orthodox of the latter who has really mastered Egyptian discoveries, (and on this question the opinions of those who have and are workniese,) and the strength of t

We are dealing, in events so inconceivably remote, with stratified masses of time, and not with supposititious calculations of the exect day, week, month, or year; in futile attemps to ascertain which so many learned investigators "ne font qu'un trou dans l'eau."

One final observation.—Misled by modern* English Divines, whom I had been taught erroneously to look upon as authorities in hiblical criticism and chronology, I attempted in 1842 to reconcile Egyptian Annals with the Septuagint computation, (Chapters, ubi supra, and pages 51, 52, 61); pointing out at the same time that I

² By the adjective moders, are intended those of a distinct school to the Waltons and Kennicorts of past University generations.

sent the manners and customs of the Ancient Egyptians 5,000 years ago. These discoveries corroborate those made in the Pyramids, and furnish abundant genealogical lists, royal and private, by white all the Pyramids will be classed scriatim. So full and accumet was the knowledge to be derived from these representations, that Lepsius promises to "wint the Court Journal of the 4th Memphite dynasty"—of kings who died above 5,000 years ago! This will finally demonstrate the utilistant bearings of these discoveries upon the popular celucation of our age, with the folly of perpetuating classical fiblies that are now annihilated by monumenta facts.

Mr Gliddon showed, among other things, how Glass manufacture was known in Egypt 2,000 years previously to its reported discovery by the Phoenicians; and how the decimal system of numeration, units, tens, hundreds, thousands, and upwards, was current in the days of the Pyramids, or 4,000 years before the Arabs of Mobammed's era. In the tomb of Eimer, nrchitect of the Pyramid of Shoopho of the fourth Dynasty, is nn Inventory of his wealth. There are amongst other details, "835 oxen, 220 cows, with their calves, 2234 goats, 760 asses, and 974 rams." The numerals are hieroglyphical ciphers; and the same decimal system is found in the quarriers' marks on all the Pyramids. Indeed, it became evident that, perhaps, with the exception of steamboats, electrotypes, daguerreotypes, the magnetic telegraph, chloroform, printing-presses, and cotton gun-powder, the arts and sciences were much the same at that early period in the valley of the Nile as at this time in our own country. The drawings of the trades, as found pictured on the walls in the Tombs, show the practical sort of people the Egyptians were.-The Lecturer here pointed out in the paintings upon the wall, carpenters at work, boat building, musicians, poulterers, veterinary surgeons, wine-pressing, brick-making, weaving, ploughing, transporting of columns, &c.

He stated that the deductions of the hierologist may be checked and verified by the narrations of the Greeks, and by mathematical calculations which show the great length of time necessary for building the Pyramids at least 1500 years from first to last, beginning with the second or third dynasty, and ending with the wetth or thirteenth.

Mr. Gliddon next treated on Lake Moeris and the Labyrinth.

entertained strong doubts as to the validity of my endeavors. Since that day, these philosophics hereise have been abandoned as untendable; and the large decoted four years to behaviach studies and the works of continental engesters, my outliertures have been conducted upon different principles. The indulgent reader outlier to the continent of the continent of the continents of the principle of the continents of the continents of the continents of the "J"all participle is unless bidle doubt jet me troove is design anisotromic. Lake Moeris was situated in that part of Lower Egypt known as the Fayoom. [El-Fayoom of the Arabs is derived from the Coptic name P-IOM, the waters, corresponding to the Hebrew IAM, seg, in consequence of its ancient aqueus state during the inundation; or from PHI-OMI, the cultivated, owing to its Inter fertility : (Champollion, "L'Egypte sous les Pharsons," 1814, I., page 325.) Its hieroglyphical name, discovered by Mr. A. C. HARRIS, reads, "Land of the Crocodile." The Greeks, translating its Egyptian name, called it "Crocodilopolite Nome," derived from the vast number of erocodiles which once inhabited the Nile in that vicinity. There are none now to be found in Lower or Middle Egypt. They exist only in Upper, commencing at the Thebaid. A Queen Arsinoe, in the time of the Ptolemics, gave her name to the Fayoom, and in classical history it is commonly known as the "Arsinoite Nome." It was very difficult to determine the exact site of Lake Moeris. It had been supposed that it was what is now known as Birket-cl Qoorn, or Lake of the Horn, which is thirty-five miles in length by seven in breadth. But the absurdity of this supposition is shown by the fact that the Lake of the Horn is some hundred and twenty feet below the Nile,-The true site was discovered by Mons. Linant de Bellefonds, chief engineer in Egypt.* He found an ancient dyke in the upper part of the Valley of Fayoom, which he traced through its whole length and discovered the remains of its abutments, slnices, bridges, &c. This immense dam retained the high waters of the Nile which flowed into it; and the nncient Egyptians were thus enabled to irrigate 370,000 acres of land hetween the Fayoom and Alexandria. where 65,000 acres only are now cultivated. M. Linant, in view of the immense advantages of this work, urged the repairing of it upon Mohammed Ali.

Mr. Gilddon then spoke of the Labyrinths, cautioning his auditors not to confound the Egyptian Labyrinth with three others mentioned in nuclent history.⁴ M. Linant also determined its site. It stood upon the borders of sincer conviction, longturpus sprès gue nous en commes, i grande poine, d'une serve obspicers, "a Beprésentations Zodienches," Faris, 1846, pages 5, 6) (See Ar-PERDER, E), page 3.

* As far back as November 1839, while exploring the Lakes Termsh and the dot of the ancient cand on the Ishmans of Seas, during a dromestary excursion, my valued Colleague M. Lake Mearis in the vicinity of the brick Pyramid of Howira. Dr. Leptias writed the spot with the Prussian explorers, in June 1843, and discovered an area of 600 feet in length, strewed with columns, entablatures, melhitaves, exchitaves, exchitaves, exchitaves, exchitaves, exchitaves, exchitaves, exchitaves, exchitaves and pillars, identified it as the great Labyrinth of 5000 chamilers described by Herodotax. A centracise was found in the Labyrinth, of the same agnification of the same agnification of the same agnification of the same agnification by one King—the Labyrinth for his palace and the Pyramid for his tomb. (Bosous's Correspondence) in McKerwass and Life Gesters, 1845.)

The date of the Labyrisch is uncertain. Lepsius has found in its risis the val of TALU-MacRe (Resultini, No., 60—Re-METAOU) or Tathet of Adystes, No. 38), in whom the Moreir of the Greeks is easily recognizable and, No. 38), in whom the Moreir of the Greeks is easily recognizable and, cocording to Experise, this Monester built the last of the sixty-nine Pyramids, and reigned about 2104, no. This is, therefore, the termination of the Pyramidal period, which ceased when Every know overna by the shephered which ceased when Every Know overna by the shephered which ceases when Every Know overna by the shephered which ceases when Every Know overna by the shephered which ceases when Every Know overna by the shephered which ceases when Every Know overna by the shephered which was a supplied to the Control of the

Mr. Gilidon concluded by answering the objections so often urged against the Pyramish, that they were the monuments of the tyramy and oppression of the Egyptian rulers. It is impossible to condense and do justice to his forcible argument, that a people whose evidiation in rest and sciences is attested by the architecture, materials, and hieroglyphical data of the Pyramita themselves, even if forced by deepoption to have exceted once or two such assume of the word, for above risty-raise bingly generations. He aboved that control of the word, for above risty-raise bingly generations. He aboved that Green and Romm opinions on the subject, written 2,000 years after the cessation of Pyramidal buildings, were purile; and that as each of these manuscles was erected seration, but by bit, and year by year, by national

Alphabest, the letters M and B were dialectically interchangeable. The fand S in the islanic equipolarier. It is easy therefore to precive, that a name resembling LABAR is a component element in the word LABYE dashes, Artistyne floor, in the latest of the Greaks. Struck with this coincidence, in 1846, I unlimited a down to us by the Greaks. Struck with this coincidence, in 1846, I unlimited a great method of the contract of the Greaks of the contract of the

will, and at the expense of the Government, its construction was no drain on the country, cliker in men or in money. On the contray, the wisdom of the Egyptian Postificate became apparent when, independently of an infinite of other advantages, it was shown that the gross bulk of the labor on the Pynnish must have employed the poorer classes of a vast agricultural population, confidend by nature "in minit lool" on a mere strip of allavial bounded by barren rocks, when thrown idle every year for three months by the periodical intundation of the river Nike.

The Pyramids, as the sculptures coeval with them attest, were therefore built by the Eauptians, and not by foreigners, far less by slaves; which led the lecturer to digress upon the subject of slavery among the Egyptians. It is absurd, he said, to cast the charge of enslaving foreign nations, as a reproach upon the Egyptians, when Scripture in all parts of the Old Testament recognizes slavery as perfectly legitimate under the old dispensation. He would not lose himself in endless texts, but were he to enter into the subject, he would begin with the Almighty's covenant with Abraham, in Gen. xvii. 12, 13, where the words of Jchovah to Abraham, "He that is born in thy house, or bought with money of any stranger," gave ample sanction to Abraham's purchase of his fellow men. He would also cite the instance of Hagar, Gen. xxi., 10, as an Egyptian bond-woman or slave; and he would go at once to the Hebrew text of Genesis xxiv., 2, and show that Abraham's "eldest servant," as our version has it, is in the original, "Abraham said unto his most aged slave." The Hebrew word is here ABeD, which meant a slave then, as it does now in the colloquial Arabic of Egypt.

The Text shows that the ancient Jews were allowed to sell each other as slaves, ABeD-hebrž; their males, (Exodus xxi, 26; Deut. xv., 12-18; Levit. xxv., 39-44, &c.,) for a term of servitude; their women, La-AhluH, to be mothers, or as concubines (Ex. xxi, 7), for ever.

To the later Hebrews, however, belongs the honor of the first historical renunciation of slave-holding. (See Philo and Josephus on the "Essence.")

Mr. Gliddon mentioned a curious fact, that although all varieties of the Ngoya new vere common in Egypt from the earliest times to the present hour, as captives and slaves, their labor was never applied to agricultural pursuits, but reserved for domestic service. This is accounted for in the circumstance, that Negroes are short-lived in Egypt, and in the abundant poor population of native Exervinais in the valley of the Nile.

The hieroglyphical designation of KeSH, exclusively applied to Africa merca as distinct from the Egyptians, has been found by Lepinus as it place as the monuments of the sixth dynasty, before n.e. 9000; but the great influx of Negon and Mulatto meet inthe Egypt as expire, dates from the twelth dynasty, when, about the twenty-second century, n.e., Pharob. SESOUR. After the TASEN extended his computed by the Nile far into Nigritia. After the Nile of the Nile o

We have found it impossible, even with the facilities afforded us by the lecturer of access to his MSS, to present anything like a complete view of the multitudious subjects interworen or digressed upon in his discourse on the Peramids—the most ancient and stupendous labors of man on earth—

elucidating the arts and sciences attested by their varied materials of construction; it was distances from which some of these, such as the grantite, were brought; nor the simple methods adopted by the Egyptians for the tamaporation of this ponderous substance from the First Catanet, or rafts, which floated off at the rise of the Nile. Much he spoke also of the simplicity of their mechanical powers in those primitive spechs—of iron and coppening the phenents, the ore of which came from the mines at the Peninsula of Sinai, "Beffa; for the properties of the Sinai," "And bis Petrefa," 1800—and Lursars, "Panisula of Sinai," 1846; for plates and description of these hierographical tables! 2 and of the circle-tion deducible from the sculptured walls of fombs clustered around each an uncleus for the cometeries of the nobles, ministers, clergy, and officials of the day."

Most of these interesting conclusions would be incomprehensible to the reader without the perspicuous diagrams, charts, and tableaux with which

Mr. Gliddon elucidates his oral prelections. One position, bowever, scemed established, viz., that the builder of each Pyramid ruled supreme over the entire country, and therefore that there were no contemporaneous dynastics during the Pyramidal period; nor can the long duration, claimed by the . Newspaper sports, were the critical investigations of the distinguished Naturalist, Dr. Charles Pierkermon, into "the introduced plants and animals of Egypt," &c. Their substance, through his friendship, has long been familiar to me; but they are now pranted in his valuable contribution to sectione, "The Rance of Man, and their Geographical Distribution," contribution to science, "I he Haces of Man, and their Geographical Distribution;" IX. vol. of the U. S. Exploring Expedition, 1848; a first copy of which, far in advance of publication, I owed to his kindness last June. (Cf. Ethnol. Journal, No. IV.) How many species of animals and plants, supposed to have existed anciently in the valley of the Nile, turn out to be modern! The Camel, and the Horse, are not mentioned on the Monuments of the pyramidal period-the latter, with the first use of Chariots, appears only after the twelfth dynasty; and Horses may have been introduced by the Hykrhos; whose Cavalry, (as when Conrez overthrew the Montezeman,) was possibly the cause that Egypt was "easily subdued," and "in a strange manner," by mounted hordes: (Mankfin); Joseph. contr. App. lih L. c. 14, 15.) In after times the expulsion of these harharian horsemen may have been owing to the invention of the Chariot (?), Camels, unknown norsementary are over one of the Internation of the Can Sol (1). Cheeks, although as Egyptian animals on Pharaonic Monuments, appear first on those of Meroë; not earlier, as Lepsus' visit proves, than the second century R.C.: hat Mr. Bucur informs me, that the finds them mentioned in legends of the eighteenth dynasty, existing in Arabia; amply corroborated by the Assyrian sculptures exhumed by BOTTA and LAYARD. The universal and exclusive use of Geese by the Egyptians is explained by the abrence of the common ford, probably till the Persian Inva-sion. In this long lapse of time some species of animals, such as the Wary-horned Ram, (whose horns surrount the God Num—Buxnx, P.1. I, fig. 3; hetter seen Kam, (whose norms surmount use you runn-yoursex, r.i., ng. 3; netter seen in the colored Plates of "Ammon—Chnouphis—cricocphale," apad Chartollors, "Pantheon Egyptien," 1823:) represented in the tombs of the fourth dynasty, became extinct; probably prior to the Restoration, or the fifteenth century mc. The indigenous Paperus, and the excite Letus, will be adverted to in the succeeding Lecture on Mummification

Nor does space now silow me to quote paragraphs of my MSS, relative to geological transitions that have taken place in the former elevation of the bed of the Nils; fallen thirty-forn feet in Lower Nabia, since the twelfth dynasty or 2200 or (Leratra, "Louter to Dr. Monroot". Yalla, September, 18-4, Precedings dend, on the 18thmus of Sura, within historical times; through disregard of which, peculations about the "land of Gothen," and the "Excled of the Insellies,"

Lecturer for the ante-Abrahamic kings of Egypt, be subverted by an hypothesis favorable to the short chronology, but which the geological, geographical, and physical nature of the land, apart from the monumental facts embraced in these lectures on the Pyramids, alone upsets.

We unite in the hopo uttered by the lecturer, that "you will no longer look upon the "Pyromids, as exceptions to the organic laws of hugan development, or as monatrous vestiges of monarchical tyranny and popular degradation; but will pethaps connect, that had we conserve seen the subjects of H. M. King Canors, we might have elsectfully paid our quots of the assessment requires for the excellent of a timephale cliffee, that, while if perpetuated his memory to the remotest posterity, stamped it with our national dimits, and our countr's fine."

"And tonly," said Mr. Oliddon, pointing to his fac-simile of the Great Pyramid, and tent your eyes on that wondrone edition of Nonopha, you will allow, with the wise Muslim historian, Ann-x-LAYER, that 'the form of the Pyrmids, and their extreme solidity, are indeed well worthy of admiration; and have crabbed them to resist the effects of time for so many ages, that it may almost be considered that it is Time (itself) that experiences, and suffers from, the eternal duration of these extraordinary structures; and the more they are considered, the more convincing is the proof, that the most consumate genin and skill were employed in their construction. And, if you reflect that these hoary monuments have survived the violence of man for from an older Arnh suthor). All things dread the effect of Time; but over the Pyramids Time has no power,—for, Vizur mass inelacturatibles a find the tone of the Pyramids Time has no power,—Tone, Vizur mass inelacturatibles a find the control time in Carella Institute Course—Glovers Perssurs Transcenter, 28 Nov., 1843.

lay animal mummies; hawks, owls, ibises, cats, jackals, serpents, fishes, the sacred ram of ancient Thebes, and the far more venerable remains of the boly calf, who, if untimely death had not cut short his career, would have been Apis the bovine god of Memphis. Crocodiles embalmed from the very egg, up to all sizes, prove the ingenuity of the ancient Egyptian priests, who made it an act of piety to catch and mummify such reptiles, to get rid of them! Linen cloth of all textures-some very beautiful in fabric, from the tombs-glass beads, bugles, and enamelled porcelain idols, prove that glass was known in Egypt 2,000 years before the Plinian fable of its invention by the Phoenicians. Copper mirrors, ancient leather and papyrus shoes, pottery, vases, ancient fruits, &c. These are some of the rarities all have heard of, though few in America have seen, clucidating each point of the lecturer's remarks, which we now proceed to condense. "We conceive, (observes the Mobile Tribune,) the great charm of Mr. Gliddon's Lectures to be the successful manner in which he clears away the rubbish which has accumulated around Egyptian antiquities, and renders each fact perspicuous and intelligible to his bearers. There is no humbur,-no mystification, Every thing is plain and comprehensible."

Mr. Gliddon commenced by stating that the art of mummification (from the new French term momicfactions), anticates all history—its existence is coveral with the earliest Pyramids—new, thanks to Lepsius, dating with the third dynasty, before the thirty-fourth century, n.c.!

"An Institution, that in the unknown date of its first origin antecedes all monumental and historic chronology; that was at once political and religious in its forms, no less than practically utilitarian in its objects; that was so interwoven with the mental, moral, and physical relations of the Egyptian to the 'dark land' of his sacred river, and entwined with his doctrinal belief in the resurrection of the body to bliss or suffering in the mystic perpetuity of AMENTHI, or Future State-cannot well present itself through discourses of a few hours, in a clear and classified order to the mind whether of the speaker or his auditors-after that transfer to another Hemisphere, the New world, six thousand miles from the Nile, undreamt of by Pharaonic geographers; the medium of a distinct language, the English, non-existent when the last Mummy was made; the total change in race of man, from the ancient attributes of a Hamitic Egyptian, to the modern characteristics of an American Japethic Anglo-Saxon-the transitions that have taken place through time and circumstance, and the consecutive metamorphoses in political as well as in religious creeds-combine to obscure our conceptions in encountering a subject that, apart from every other obstacle, is veiled from our nearest view by the lapse of fifteen centuries." On these grounds the lecturer solicited the indulgence of his hearers.

The derivation of the word Mummy is from the Moomia of the Arabs-the

FIGNAC, and the "Manners and Castoms" of Sit J. G. WILLINSON, are the most accessible authorities, the reader is referred to that admirable compendium, PETTIGNIN, "History of Explain Mammies," London, 1834; to GANNAL, "History of Embalming," Paris, 1838—Dr. Harlar's translation, Philadelphia, 1840; and to Marton, "Crania Zigypticac," Philadelphia, 1841.

root of which is Moon, bitumen, also meaning near, the substance which, in latter Phanonic days, preserved the bodies from decay. We obtain the word nummy from the returning Crussders; for St. Augustine, in the fifth century, n.p., calls the bodies so embalmed Gobberus.* Even our word offin is of Oriental orien, from the Arabie term keffen. to enclose in a winding sheet.

This premised, the Lecturer went on to describe, by means of geological accisions, the four features of Egypt—necks, and valve, and alluvium—how the action of the insudation drove separlture first to the send, and afterwards to the reck, so soon as man had reached the possession of metal toolks, wherewith to make an excavation. In this process, Mr. Gilddon opened send views, see methods of reaching some of the events which antedstet all human monuments now extant; touched upon geological transitions; showed how the altivium of the Nike has been deposited annually upon the limestone, for more than 7,000 years, (See Appensize D.); and maintained that there is not the slightest reasons why the primitive datatic Normal, who migrated into the slightest reason why the primitive datatic Normal, who migrated into the other darks of Pegypt, and hence elevieve the name of Akons showth of the contraction of the property of the primary of the property of t

The features of the surface of Egyps, admirably explained by Mr. Gild-on's colored diagrams, are rock, anal, daluvian, and twer. The country itself consists of a long and narrow strip of alluvium, with the Nile in its milds, and bounded on each sjide by barron necky ridges. There is little rain, and the only potable water is from the periodical inundation. This becomes more brackish as it recedes from the river, owing to the saline ingredients it disolvers out of the soil. The alluvium which, in consequence of the deposit

of mud that takes place in its bed, is higher at the river's banks (like our American Nile, the Mississippi,) than further inland, is exceedingly fertile, and must have been anciently, as now-a-days, immensely valuable when crowded with a population of from five to eight millions of souls. There was a necessity for preserving it carefully for agricultural purposes, especially when commerce did not give the means of supply in case of scarcity. It is not used for burials at this day, except on the sites of the old cities, elevated a few feet above the inundation. The ancients never used it for sepulchral purposes, and hence they had no choice but the rock or the narrow strip of sand that intervenes between the hills and the alluvium. In the earliest age the ante-monumental Egyptians probably buried in the sand, because they had not the tools necessary to excavate the rock. This sand was a precarious position for dead bodies when wolves, foxes, and jackals were so abundant. The crocodiles, especially, would disinter them whenever the inundation brought those reptiles to the edge of the desert. There was also danger that a high Nile would saturate the graves. During this time the metals were coming into use, especially copper from Mount Sinai. The saw for cutting stone came into use in the second dynasty. The inconveniences of sand-burial would therefore soon lead the population to look to the rock for sepulchres.

The Sand was the primitive ante-monumental burial-place, because the alluvial soil, the lase by many thousand immediates than at this day, was too precious for agricultural purpose; but the sand was too precious for agricultural purpose; but the sand was too precious a position to be used as son as evilitation had advanced sufficiently to enable man to cut the rock. Hence the burial of the dead was curried to the bills, that bound the narrow valley. The Western hills were selected, because the cities, whose cemeteries, Thebea, Alydos, Memphis, [Tyamida, &c., for concines sake were to them contiguous. But there was also a doctriaal reason why the West was selected. It is the Occident, the dark region of the setting sun, known to the Greeks as Erdest. The root of EREBus, is the Semitic word Eura, the West; mentioned in Gen. 1-5, &c.; the samo radical whence the name Ardus, literally the "men of the West."

(From the same root proceeds the Arabian name of MoGhikells, applied to Barbargy, as the Western land; occupied at this day, as anciently, by the Berber tribes, whose present Nubian designation of Berübers is at least as old as Marsarra L., of the eighteenth dyn, in the skitecenth century, n.e., when it occurs hierophybrically in the name orthographed BBBll, or BRILBBAR. The Berbers of Northern Africa, whose traditions are Comanabarries applied by the Greeks to all nations but themselves, possess have been supported by the Greeks to all nations but themselves, possess have resolved into P tide, EREB West, and BAR Sem, (or BER, Arabice Country,) thus yielding again is EREB-BAR, the Soms of the Vert. 3 **

The West was called EMENT by the Egyptians, who therefore termed

This ctymology of the word Berber will appear as speculative and objectionable to many able judges, as it is novel to all. Its justification involves an argument that, although prepared, is too lengthy to be inserted in the form of a note

the future state of the dead AMENTHI; corresponding to the Homeric idea of Εριβος, a region of darkness intermediate between the earth and Hades; and to the Hebrew Sneδe, Oreus, of which our English word hell is an erroneous translation, no less than a mythological anachronism.

Thus the West, the Occident, region of the tenchrous sucknown future state, was in mirreal mythology consented to the dead; because the Sun, primeval divinity of all nations, sets there, leaving the world in obscuirty; and in Egypt the bodies of the early dead were mostly intered in the Western hills, while their souls followed the shades of resning, RERB, to Amentali. It is from this primitive cause that Oriential nations still we East and West, although each at the present day relates a different doctrinal fields for the custom.

Mc. Gliddon acst proceeded to the investigation of the regularial architecture of the Egyptians; prefixing this part of the subject (we quote the Southern Patriat, Clarletton, 17th Nov., 1847,) with some very impressive remarks on the philosophy of National Architecture possesses peculiar characteristics, whereby the student can trace ancianal origins, and elicitis undo for given people's ante-history, from the several styles of their monuments. As the grammatical construction of a given language enables the philologist to deduce, not only the printing reographical habitant and ethnological affiniations of the nations that speak; ib, but also what foreign admittante it has received, or the state of the stat

Thus, for instance, the Payode-forms of the now-stationary Chinaman still point back to the remote age, when fields stars were the abodes of his no-madic ancestry. The test-site roots of the modern Turk, that give not a picturespace effect to Ottoman cities, ut ell of Tartarian encompments in Central Ain; and, by connecting him with the Chinese, enable us to deduce his printitive origin from their vicinity, even if his hanguage, his habita, his militaring the contraction of the contraction with necessary of higher costs, four contracts in Europe have effected in his playings, all on narrante the same story.

We Anglo-Saxons seem to cling, through our favorite architecture, to a vague remembrance of the lofty forests of ancient Germany, where our hardy ancestors so long halted in their circuitous march from Central Asia; and,

in this No. of the Janual. Craving the inchigence of the reader, I will endeave to introduce its defines, (register with some two comparisons between necticest anxessor to introduce its defines, (register with some two comparisons between necticest anxessor and the contract of the comparison of the contract of the co

like the Goths, we still love to behold in stone the columnar forms of Northeru trees; and even now make the ceilings of ecclesiastical buildings in resemblance of the interlocked boughs of shady groves, under which our Druidical

progenitors offered their simple sacrifices.

The Spaniards still revers the architecture of the Saraous they expelled; and El-Hanna, Condrow, Grenada, with their derivative monument of Catholicity in America, even yet record the asjourn of the Muslim in the Hispanian peninush; who there epitomical the traditions of his own anticro life in Anbian deserts: for, essentially a Southern people, occupying a land where, in the absence of the dense foliage of Northern Initiades, man seeks shelter from the sun mind the shadows of fire-demodel rocks, the Artha, quickened they have been considered to the control of the shadows of the control of the politic theory of the politic through the control of the politic through through the politic through through the politic through the politic through through the poli

This sketch of the principles adopted by archeologists in evolving fragments of the natural history of man through the "comparative anatomy" of monuments, when applied to very modern nations, such as the United States, proves their diversified origins through the architectural intermixture of different national styles: but on applying the same criterion to the Pharaonic monuments of the Nile, we encounter one united mass of architecture, preserving throughout, whether in its Pyramids, its Temples, and its Tombs, or in its Sculptures, Paintings, or Hieroglyphical Writings-from its almost superbuman scale of gigantic effort, down to the bumblest detail of its minor attributes -one and the same all-pervading system : and this system no imitation of the architecture of any other people on earth, but self-begotten, selfdeveloped, and self-fallen ; never, from its earliest infantine cradle attainable by inference, down to its last effort of expiring decrepitude, during a monumental period of above 3000 years, having adopted foreign ideas, or tolerated any alien interference. Other and later nations have appropriated, in divers degrees, the architecture of the "Land of KHEM;" but the Egyptian copied no one-he thought and acted for himself.

In tracing, therefore, each feature of Nilotic architecture to its birth, we must seek in Egypt itself, its soil, climate, geological constitution, and

natural productions, for the solution of our queries.

After a rapid glance at the exploded fallacies of Gav and others who, mistaking the latest for the earliest monuments, (substituting Roman abortions for pristine Pharnonic commencements, &c.,) traced the progress of architecture from Ethiopia downwards, the Lecturer explained the origin and nature of Egyptian columnar architecture, pointing out on his illustrations abundant examples in support of bis assertions.

Egyptian columns generally represent various combinations of the vertical stalks of plants, tied together by horizontal bands at regular intervals, and terminating in a capital formed by the leaves, flowers, petals, bads, and other parts of the papyrus, intermixed with each other, (sometimes with the Lotar y and often accompanied by bameders of the plan. The architarva never rests upon the flowers of the capital, as in Grecian columns, but upon a square abous; 100king as though the column consisted of a central square beam or shaft, the stalks and flowers being subsequently added, and lashed round by way of omannent. He showed how the vegetable ornaments on Greed monuments are of Hellenic origin, Acantlus, &c.: just as the ornaments on the two pillars, Jodens and Boss, were little and pongamants, plants indigenous to Palestine:—(See Laxes on I. Kings vii., $17 \otimes 21$). He proved that the Egyptian columnar forms are taken from the Papprus and Palas Tree, which plants in princerilal times had served the wandering shepherds, who settled in Lower Egypt, for their first flood, and had been the materials who settled in Lower Egypt, for their first flood, and had been the materials the state of the state

In Egypt we find only plants peculiar to the Nile represented in primitive architecture, as the papyrus and palm; and these were painted in appropriate colors. There can be no doubt, therefore, that Egyptian architecture was autochthonous, and we need not look elsewhere than to the valley of the Nile for its adoption.

* The Cyperus Payers of Limmens, at the earliest age, price to the introduction of the Cyccala, we princed alienes? of the Egyptians, using during the monomental form of the Cyccala, the "princed alienes" of the Egyptians, using using the monomental princed and the cycle of the

I am unaware that any naturalist had Dr. Pickanzo, a very high authority, has inhereto deemed the Date Palm to be of existe origins: (16th. jage 971-1). He considers that it was "a most important morelly, introduced about the age of the other parts of the humble quarry-near of Tozoch, whose spech would seen to belong to its pyramidal period: (CK. If by the term "Sacred Lotus be seemathe Arkenbism of Hindotan, that plant (freally known to the Pharaonic Egyptians?) was indispatably of freign origin; (Prackarso, pages 300, 388, 385.) and the only specimen I have ever seen in Egypt was pointed out to me in Herbeaue Pash's gendered, at the Island of Rhoda, as a plant introduced from Iodia after 1835, and more extens the where in the valley of the Mile; although another accurate observer, Mr. E. W. Linxa, has

To account for the use of those plants in columnar ornaments, we are to look to the history of the first Asiatic shepherds who reached the banks of the Nile. Here they found but few trees of any magnitude, such as the thorny acacia and the date palm, and a profusion of water plants. Their vegetable nutriment was furnished in ahundance by the papyrus root, the date, and a few other fruits. The first, as supplying these nomadic tribes with their primitive aliment, became sacred to them. The papyrus also gave them the material for clothing, baskets, mats, ropes, sandles, and boats. (Isaiah xviii., 1, 2,) The papyrus was, in fact, the first element of Egyptian civilization; as in after times it became the main one, when its stalks, converted into paper, produced upon the ancient world effects similar to those which magnetic telegraphs are going to do among ourselves; and yet this plant, which was once the principal food of the Egyptians, is no more to he found in the valley The date palm still feeds the population of Egypt for two months of every year, while its trunk furnishes the longest timber, and its branches, leaves, and bark answer an infinitude of purposes. These plants also furnished to the Egyptians, in their age of nomadism, the earliest habitations. The stalks of the papyrus and the slender branches of the palm, bound together by withes of the same substance, formed columns. Between these the pliant stalks of the papyrus were interwoven, palm branches served as rafters, the leaves furnished thatch, and a coating of Nile-mud rendered the transient edifice secure from the weather. Such a shanty is made hy every Nubian at this day. These habitations would be abandoned without a sigh, for others reared quite as easily, as soon as the cattle had caten off the forage or man had exhausted the natural resources of the vicinity. When the Egyptian, in his monumental phase, ahandoned these vegetable dwellings for permanent brick or stone cities, he perpetuated the memory of his pastoral condition in the architectural embellishments of his new habitations; in memento of that plant which Herodotus (II., 92). and Horus-Apollo (I., 30), term "the primitive nutriment of man "-" the first origin of things. The papyrus and palm branches which form an Egyptian capital are then

The papyrds and paim branches which form an Egyptian capital are then

since told me that it is still grown in the garden called Birket-er-Ruttle, outside the Bah es-Shaeréeyeh at Cairo. If, which seems to me less liable to historical objections, the monumental Lotus

In pointing out to my andiences the exquaiste taste exhibited by the Egyptians in the multiform combinations of their expitals and pillars, I have mused use of the superh colored plates of "Paracrama de Piggrote et de la Nulle," Paris, 1844-7, by my friend M. Robart. The "Sketchess of Egypt and Nulls," own in course will enable me to embellish my American gallery with Mr. David Roberts" magnifects tablesus.—G. R. G.

but the record of an earlier period, when these plants, bound together in their natural state and surmounted by their flowers or leaves, were important pieces in the primitive habitations.

Without the papprus, said the lecturer, Egypt could not have been the primary school of infantine man—and if Egypt be deducted from the world's primeval history, what remains?

Through this method we reached that long, but chronologically undefinable, period between the formation of the Niles alluvial deposit (prior to which Egypt was mainhabitable by man,) and the creation of the earliest Pyramid; the existence of which attests anterior ages occupied in progressive steps towards civilization. Chronology is set at marght in the contemptation of its antiquity. Mr. Gliddon designates this blank of time by the term ante-monumental.

By the same inductive argument, we arrived at those remote days when the Rock had not yet been exeavated for Tombs; and therefore when Mummies had not yet been manufactured in Egypt, the land of Mummies; and when the Egyptian buried his dead in the sandy space which bounds the althyium. In still earlier times it is probable that little attention was naid to the dead.

but bother were abandoned, as was the case in Chine in parallel ages, long prior to ne. 3, 300; (see Parmins, "Chine Anecines," and the Chosing,) But a natural feeling would soon suggest the propriety of hiding the copress of a one-tooyed friend underground, and with rude materials a grave would be seratched in the alluvium. This becoming too valuable as popular to innercased, and being besides subject to inundation, the auda was next chosen as a pince of inhumation. The danger from with bests, Kee, zera-design this objectionable, recourse was finally had to exervation in the

The fecturer digressed from his theme to show how the antiseptic and hardening qualities of these saline ingredients were known to the Egyptians, from their presence in the mususiar. Herodous, and other ancient authorities, mention Arziarum sate humin condiment of the embalmers; the body being probably steeped for many days in a bath containing a strong solution of this sist. The dayness of the climate of Upper Egypt is so remarkable, that Mr. Gliddon has seen the ment harden without putrifying, from solar action alone. Owns for baining the localies of the deal opper indigeneousle action alone. Owns for baining the localies of the day per indigeneousle the education of human corposes; all meanuries having been thoroughly dried.

It is from this Sand burial that mnmmification takes its natural rise. The sand of Egypt is impregnated with salts, natron, nitre, common salt, and alum, which destroy the oleaginous and lymphatic matter of bodies.* The

Furtisian science has considered to the chiral preservation of human carease. Furtisian science and the contract of the contract of the chiral preservation of the contract of the contrac

Sun's rays supplied the baking process of desiccation; and here we have the simple origin of primitive mummics, of which Nature was the first suggestive, The primordial Egyptians, therefore, found the bodies of their departed friends preserved and mummified by a natural process, and they consoled themselves for the death of those dear to them by seeing their forms thus remaining unaltered. When, after ages of experience and self-tuition, they abandoned interment in the sand and began to bury in tombs excavated in the rock, the difficulty presented itself that this desiccation and preservation no longer continued to take place : with a little thought, however, they soon discovered the cause of the natural process to lie in the salts contained in the sand, combined with its drying and baking properties. Natron drawn from the lakes offered a substitute for one, and artificial ovens for the other. In proof of this it is known, said Mr. Gliddon, that the earliest mummics were prepared simply by Natron, desiccation and wrapping in woollen cloths, without the use of bitumen, or any of the costlier materials subsequently employed in the process of mummification.

Art, in progressing civilization, improved upon the same principles, until the conquest of Assyria, during the eighteenth dynasty, s.c. 1,600, by making bituminous countries accessible to the Egyptians, introduced bitumen, with which all later mummies are embalmed.

"Such is an outline of this instructive lecture, although it is impossible, within the brief limits to which we are confined, to do anything like justice to its ample and interesting details:"—(St. Louis New Era, May 4, 1846.)

AFFENBIX D.

Seren kleasmed gear.—I have adopted in this instance, without therefore accepting all of this kearned writer's hypotheses, and mercity as a conjectural minimum of the series of the ser

This nade outline of a chart, wherein Egypt is reversed from the usual order of hydrographical accuracy (i.e. hursed spaced down; the Mudicerranaen being placed at the bottom of the page instead of the top); is the reduced copy of a large order Maps—split feet by four—sharps suspended in my translatinic Lecturetom of the control of the split is supposed by the property of the p the relative position of Monuments situated along the Nile, it would appear paradoxical were he to point downwards on ascending the River, or vice versa, as he would be required to do on the ordinary arrangement. Six years of practical experience have, moreover, confirmed the expediency of this arbitrary despition

from hydrographic usage.

On this original Map the olors of the four characteristic features of Egypt as on prevented—the Nile in four, the alluvium in grees, the slight intervals of sand in pole yellou; and the harrier ridges of the "High;" (Arabic-shou; the modern pole yellou; and the harrier ridges of the "High;" (Arabic-shou; the modern upwards, bounds of the ridge of the Villey), in hades of forces. A glance at this chart coaveys to the mind of a spectator, excustomed to the forest-clash lills of the chart coaveys to the mind of a spectator, excustomed to the forest-clash lills of the Luided States, more than a rolume of cripiantics. Perconal acquisitances with chart caves of the control of the control of the control of the chart of the control of the

Bat lexturing experience soon convinced me that but few of those who have not incumily visited the Valley of the Nike, and not a few authors who have, with opinions in regard to the earth's asperficien predicated upon local European or colorior among of Egypt above referred to the currior valicion that the Valley of the Nike bears to its limitrophilo deserts, and adjacent provinces of Asia and Africa. To deviate this difficulty, in an effort to popularise knowledge among the masses of the people, I have lutterly constructed a sectional disgram, which I now proved of the people, I have lutterly constructed a sectional disgram, which I now proved contract the contract of the people. The new lutterly constructed a sectional disgram, which I now proved reads to make a similar clear for himself, continued with each of the contract of the contract of makes a similar clear for himself, continued and with each of the certifical contracts.

Looking from North to South, up the Nile from the Mediterranean (as in the skeleton map, "Chapters," p. 39, I have stricken an inaginary line, for about 730 miles in length, transversely from Arabia Petres, through Cairo, to the Oasis of Seewah, between long, 36 and 24, and in breadth from about 1st. 30 to 26, so as to cludde the Gulf of Akaba on the left band, and the Basin of the Faydons on the

right

In such a sectional arrangement the mountains of Arabia Petres are seen to dip shrulyly to the level of the Ekantic Galler, G Bide Alabet; rising again to the beight of \$,000 test in the ergage peaks of the pintosis Petrians and Six with a gradual peak of \$,000 test in the ergage peaks of the pintosis Petrians to Six with a gradual final and surrounding the lagorous of the Istamus. Thence the limestone formations, commensing with Grod-to-Tapa, form a recky table-hand, intersected by the constinant Spatia, guilles and ravines, of the Eastern Desert, as far as the Moldhadph to about 500 feet above the level of the river, to form the subterraness also of the rocky concavity scaled the Valley of the Nilty, now which, during unknown centuries, heretofore countiess, the "Secred Kiver," has been annually capositing its Keendeest allevium. On the oppositor, or riph brant, of this basis, alevation of perhaps 150 feet; whence, in a continuous table land or steppe of and caleration of perhaps 150 feet; whence, in a continuous table land or steppe of and vallies termed Once, the Western high-hand trend across Africa till hey loss of a sall occase.

Colored according to the general aspect of their respective superficies, as these Mountains, Seas, Alluvials, and River Nile, are in my Section, the mind of the visitor of my American Lecture-rooms grasps at once the unique features of Egypt's

Place in the World's Geography."

He is struck with the atomic proportion that the fertile allavium of the Nile, little more than one per cent of entitwhe les oil in 750 miles of starfity—bears to the unked rock by which it is flanked; and if he earry his parallel to the Atlantic on the West, and into Arabia on the East, he becomes ansared at the infinitesimal proportion of fertility to wilderness; (see on this bead, the judicious remarks of PICKERING, "The Races of Mar. and their Geographical Distribution," Fulia-

[&]quot;Récueil des Inscriptions Grécques et Latines de l'Egypte," Paris, 1842, page 189 et seq.,) has completely exhausted every source of information on all that relates to the Ascient Conal of the Isthmus of Suez, from the earliest times down to its final closing by the Khaléethe Gisjar et Manson, A.D. 767.

These were the authorities, using personal knowledge of many of the localities as a discriminating using k-trough acquisitations with which it constructed the colored Maps discriminating using k-trough acquisitations with which it constructed the colored Maps has recently accessible to me, has not only confirmed all my previous imprecious, that has superciced the accessive of my faint whole present chain imprecious of the Authors with an Atla, Statugest, 1814.5. There are others who would prefer references that might confirm their preconceived opinions on the plenary authenticity of the so-called Mosaic Corsogony, and Delage. These will find

To my mind there is not the slightest doubt, that the geological phe glanced at above, exercised of yore the ingenuity of the "Sacred Scribes" in the games as accept exercised by one the nagentary of the "Sacred Seriors in colleges of Memphis, Thebes, and Heliopolis; to whom these vestiges of an anti-allurial Egypt were as nnavoidably apparent 5000 years ago, as at this day to ourselves. The ancient quarry-man's copper-adie, stricken into the limestone to cut ont a block for the earliest Pyramid, disengaged at every blow nummalities, corals, feedbased and adult membranes in the contract of One a mocks on a skells, precisely in the same manner as these and larger pelacon-tological remains are laid hare now-a-days by the iron pick-axe of the modern Fellah, forced by Ossahnlee club-law to quarry stone at Toorsh for the barragers the difference consisting solely in the instruments, the objects, and as regards monumental permanency, in the prospective utility of the labor; the Pbaraonic Egyptian working for a prince of his own race; "sio vos non sobis" being our commentary npon the narequited toll of the present "adscripti gleize." And just as the European geologist, fortified by centuries of accumulative experience, rehailds from these remains a systematic theory of the successive revolutions and transfor-mations which the surface of our little planet bas undergone, so with less science that with equal curiosity and seal, 2000 years before Europe had a Grecian name, did the giant intellect of "Priests and Scribes" (who created and invented those arts and sciences without the prior existence of which Shoopho's name could never bave been inscribed phonetically on the entresols of his stupendous Pyramid,) ponder on these geological phenomena, and construct for themselves a scientific theory of ante-alluvial cataclysms; the fragments of which primitive philosophical conception, after transfer to adjacent countries, and undergoing varied metamorphoses to suit the peculiar tenets of more recent hierarchies, have perhaps morproves to sure pecuniar teners or more recent interarchies, have perhaps descended, in Oriental literature, as our heritage to this day: (see Dr. BROTONE). "Civilination Primitive," Paris, 1845—for these consecutive alternations of Inquiry, Philosophy, Dogma, and Criticism.)

We arrive, in the year IS48, A.D., at scientific conclusions through the laws of inductive reasoning. Long before Bacox, a learned "Helrews of the Helrews," versed in Heirosolymite science acquired "at the feet of Gamailed," defined this first principle of logic in a few words : "for his unseen things from the creation into principle of logic in a rew works. There is uniscent using a from the version of the world, his eternal power and godhead, are clearly seen, being understood by the things that are made; y''-(Paux, Rom. L. 20: Sharp's New Testamen, 1844, page 284). To deny, therefore, to the Egyptian Savan, in the due relation of the individual to his own remote age, prior to the existence of those scholastic. dogmata which we Anglo-Saxons inherit, from the East, through the obscure medium of our own "middle ages," the same capabilities of mental ratiocination, equal powers of drawing conclusions from the same phenomenical data, appears to me unphilosophie; at the same time that, fully conceding the unavoidable errors proceeding from their very circumscribed and limited knowledge of cosmical clements and facts that 5,000 years of human progress bave since developed, I am fain to recognize no superhuman knowledge among the ancients

At what era of the world's geological history the River Nile, the Bahr-el-Abiad in particular, first descended from palustrine sources in Central Africa, slong the successive levels of Nuhian plateaux, through its Egyptian channel to the Mediterranean, (beyond the indisputable fact, that its descent took effect after the depo-sition of the so-termed DILUVIAL DRIFT upon the subjacent limestone,) is a problem ston or the so-termen intervial. Busive gipon the subgenetic messens, is a proteen yet unsolved. But were proper investigations, such as those commenced in 1799 by Granan, and cut short by European belligerent interference, entered upon, in the Valley of the Nile itself, by competent geologists, the allimatic antiquity of the "Land of Kattax" could be approximately reached. Nothing of a more specifion nature than what is contained in the works noted at front has litherto been pub-

studii otteaere l' assenso, senza vaghezza di riscuotere fama o favore presso i volgari:" (Ro-SELLINI, M. C. iii., page 523.)

lished: nor, with the exception of M. LINANT, whose position as chief engineer, and unequalled knowledge of Egyptian topography, have filled his portfolios with materials to no others accessible, is there any one living qualified, without new local researches, to utter a decisive opinion as to the exact antiquity of the Nile.

local researches, to utter a decisive opinion as to the exact antiquity of the Nile.

I confine myself therefore to a few general observations, bearing upon human origines, in connection with this subject.

- 1st.—Previously to the advent of the "Sacred River," no deposition of alluvium having taken place on the limestone, Egypt was uninhabitable by man.
- 2nd.—Since the deposition of this alluvium, there has been no Deluge, in the literal Hebrew and genesiscal sense of the term, whether in Egypt or in the countries adjacent.
- 2rd.—Humanity must have entered the Valley of the Nile, under conditions such as exist at this day, after a sufficiency of allevins had been deposited for the view as the sufficiency of allevins and been deposited for the view as at least trensty (fifty, or more, for aught we can assert to the contrary) for blow the level of the highest proton of the Nile's bed at this its diclotes over the limestone when humanity entered Repys—it is impossible to do fifne.

That the formation of the Dolla was sufficiently early to admit of man's occupies of its at an equatorior to any otherology, it has sixted by an emission significant of its at an examination of the contrology of the sixted by an emission significant in the same of the sixted of the

R. C.

Post-seurrou.—In reference to the relation between the sizes of the two largest Pyramids of Gheezek and the lengths of the religion S0 rems I, and II., (See Ethnological Journal, No. 7, page 208,) I was not then aware of Dr. Huxest discovery, in the papers "Turni Book of Kings," that each of the kings in the latter (fourth Memphite) dynasty, the supposed builders of the great pyramids, is said to have lived interly-free years. Their names, and the lengths of their reigns, are unfortunately lost." (It. Soc. or Lur.—vide Letrary Gearch, 11th November, 1883.)

While, in the pending state of hierological inquiries, I look upon the "Turin Papyrine" as but an adjusted in the reconstruction of Egyptian chronology, I am happy to accept, for what this Papyrus may be worth, such a striking confirmation of the accuracy of my assertion, "that the sizes of Pyramids are in direct proportion to the length of the reigns of the Monarchs who built them,"—G.R.G.

LECTURE VII.

The Art of Mummification, Continued.

THE lecturer prefaced his exposition by adverting to the theory put forth by Dr. Pariser, * that the original cause of Mummification was to be

^{* &}quot;Mémoire snr les Causes de la Peste, et sur les moyens de la détruire,"
Paris, 1837—published by Dr. Pariser, on his return from the Levant, whither

found in a hygienic motive, the desire to keep away the plague; and stated that on a preceding occasion he had dwelt on the simple nationalism of send burial, in order to show how unmeressary it is to seek in precautions against a disease which did not exist until 543 years ofter Christ, for the origin of an institution which antedates that event by fifty centuries. He briefly recapitulated his preceding lecture, and then described the localities where nummics are most shundant.

They are found in greatest profusion at Mempbis, and at Thebes. The Neeropolis at Memphis is twenty-two miles in length, by about half a mile in breadth, and bere it is supposed that one fourth of the entire population of Egypt was buried.

Every provincial temple was provided with an establishment for the purpose of mummification. Here the bodies were delivered to the priests to be embalmed, and after seventy days restored to the friends to be earried to the place of deposit. The paintings in the tombs represent linear layer sions, in which we see the mummy transported in cars, or borne on sledges drawn by ozen, and attended by mouring friends. The mummies of Jan.

he had been sent by the French Government shoul 1821-30, to examine and to report on the Hopper-a discase which, singular to relate, he never my, in Egypt 1 The fallacles of this report were refuted in a materly manner by the property of the Hopper-a discase which, singular to relate, he never my, in Egypt 1 The fallacles of this report were refuted in a materly manner by the property of the temperature of the temperature of the temperature of the Contract has a factor of the

and Joseph, (Gen., I. 5, 263; Exod., silii. 19.), were thus carried from Egypt into the land of Canana. Sometimes this procession is made in boats on the Nile, canals or lakes; whence, in latter times, probably areas the Greebable of the boatman Charon. The practical utility of numminitation in Egypt is made evident, (inasmuch as the distance, from the place where the deceased did, to the recky found wherein the body was to repore, was sometimes and the control of the control of the control of the control of the control great inconvenience is often experienced at funends, in so but a climite, for want of the ancient art.

Mr. dildoon discussed the period when mumnification was first practical in Egypt. It must have preceded the building of the pyramids and tombs, because vestiges of mumnies have been found in the oldest of these, and, in fact, the first numnies were buried in the sand, before the Egyptians possessed the necessary tools for exeavating sepulchres in the rock. In the time of Joseph the art was not new.

Maximo and Casarar Alexandrinus mention circumstances which lead us to infer the existence of manuscript treaties on the art between \$0,000 and \$0,000 years ago: which is confirmed by passages in the Book of the dood. All modelm writers allude to it. The Christian fathers forbade it as a heathen custom. St. Augustine remarks, in his Sermons, that the "Egyptians alone believed in the resurrection, because they carefully present the bodies of their dead,—"Bof," says he, (alluding to his own time, an. 364 or 40%)," they have custom of they grap up the bodies and readering them of the control of the state of the

From the building of the Great Pyramid in the fourth Dyra, until this date, gives us a period of 4,000 years. The Lecturer then proceeded to make an estimate of the number of mumnies in Egypt. Let us call the period of mumnification 3,000 years, which would be greatly below the mark. The average population of Egypt during that time probably amounted to five them, by a simple process of calculation, 450 millions of numnies for the 5,000 years; but as the time was probably more than 5,000 years, the number of numnies might be estimated in round numbers at five hundred millions.*

[•] This estimate of the number of Munnies is founded upon the Inperiodicalisation of Huxary (*Egypte Phoraconique,*) It p. 64 or sec), and its quiesconication to the smoon upon which the supicate clieror of the "Lo Spetiatore Egipt at Cairo, endeavoured to show, how 420 millions of Munnies would, if divested of Loir Jane Phoraconication of Munnies would, if divested of their lines wrappers, yield 400 millions of netrical qualates of eithe 1 which when converted into paper, would produce to the Pasha's treasury, revery one millions of their lines wrappers, yield 400 millions of netrical qualates of eithe 1 which is the produce of the produce

Mr. Gliddon made another illustration. The stature of the Egyptians was rather below the European standard, and the average length of a mummy, in its wrappings is, therefore, about 51 feet, its hreadth within I1, and in height about the same. These 500 millions of mummies would, if piled up together, make a cube of half a mile in length, breadth, and height. The space occupied by the mummies of Egypt was in fact, he said, very large, some of the tombs of a single individual covering several acres of subterranean ground,

Mr. Gliddon proceeded to give several interesting and unpublished facts from Mr. Birch's manuscripts in relation to the changes in the mode of preparing mummies, and the shape and ornaments of the coffins.* The processes of embalming as well as the inscriptions upon the coffins, were in early times very simple. The oldest sarcophagus found in the pyramids had no inscription at all.

At the remote age of the fourth Dynasty, the bodies, as in the case of King Menkare, were prepared by saturation with natron, baking in ovens, and wrapping in woollen eloths-linen in that day being probably unknown. In the mummies of the twelfth Dynasty, this material is already in use ;

the bodies are partially gilded, and great luxury seems to have been introduced in decorations of coffins, ornaments, &c., which was carried to vast extravagance from the eighteenth Dynasty down to Roman times. In the absence of other indications, such as royal names used for dates connection with the Pasha's financial schemes, in which "Montes parturiunt, connection with the radius a manager scenario, it which "source parturnum, mascitur ridiculus mus." (see Boston Evening Transcript; 23rd June, 1847;—The American Mail; New York, 3rd July 1847;—and for a rich instance of the expedients suggested to MORANMED ALI for "raising the wind," compare my "Appeal to the Antiquaries," 1841; note, pages 129-131.)

It was shown by the authors of the great French Work, that, to contain 400 million mummies, a gallery about twelve-feet square should be carried in the Libyan bills four times between the Pyramids of Memphis and the first Cataract, a distance exceeding 600 miles! Xet the excavations for sepulchral purposes alone, and still in existence, are sufficiently vast to contain all the bodies ever emhalmed; even without the successive spoliations of earlier, and refilling with omanime q even without five successive spointanes or earrier, and renning with have copyes, caused by Hyskon and Persian deventations, many instances of subterrenamen cemeteries may be judged by that of the tomb of Per-Autrosper in the Assassed, Thebes—582 fort of galleries, eccupying an underground area equivalent to one and a quarter sere: (Witzussox, "Mod. Eg, and Toebes," II, 222, And leaving asside the royal sepalchres at the Bitanei-Modok which have been approximately held hut one or at most two sarcopbagi, similar extraordinary statistics result from the admeasurements of the tombs of DJIOKANPEFRAN at Saccèra, and of PHAIROPENTRAT (mischristened Col. Campbell's, as this functionary did not die in Egypt,) at Gheezeh. G. R. G.

* In the second lecture (Ethnological Journal, No. VI, note in page 256,) I expressed my indebtedness to Mr. Samuel Birch of the British Museum for an invaluable classification of Sarcophagi and Mummy-cases, which, with unan invaluable classication to according and animaly-wasts, ware, with in-paralleled knowledge of the subject, and his wounds real in the cause of science, be had the goodness to favour me with, in 1846. On mentioning to him my wish to avail myself, on the present occasion, of researches so canisently critical in a hranch so little known, Mr. Birch kindly volunteered a synopsis of his labors for the Journal; and in the form of an Appendix, the reader will find some remarks that, coming from so high an anthority, will be perused with instruction and interest. (Vide infra, page 467.) And in connexion with the subject of Bitumen, reference is especially made to Mr. Birth's Papers on the "Obcline" of Thotmes III. in the Atmeydan" at Constantinople, and on "The Statistical Tablet of Karnac," (Trans. R. Soc. Lit. vol II, 1847.)

in the inscriptions, &c., the relative antiquity of mummies can be deduced from the successive fashions of embalmment. Of these, the epoch of Bitumen forms a grand era, at the 18th dynasty; for then this substance which was unknown to the Egyptians prior to the conquests of Assyria by the early Pharaohs of the 18th dynasty, began to be used. Mr. Birch has discovered data which indicate very distinctly the epoch when bitumen began to be adopted in mummification. Among the articles of tribute exacted by Thotmes III., in the 16th century before Christ, from the conquered princes of Nineveh, Shinar, Naharina, Babel, and other Mesopotamian provinces, which are recorded on the tablet of Karnac, now in the Louvre, it is said that the Chief of the country of HIS (or IS of Herodotus) brought as tribute to the Pharaoh, 2000 ingots of bitumen, Mr. Gliddon exhibited LEPSIUS' copy of this Tablet, and other documents attesting this early conquest of Assyria. Now as bitumen is an Asiatic production abundant near the Euphrates, it was inaccessible to the Egyptians until Assyria was conoucred by the Pharaohs of the 18th dynasty; which accounts for its absence in the Old Empire; that is from the 1st to the 12th dynasty,

Mr. Gliddon produced specimens of this bitumen, with the remark, that, while the presence of bitumen, in two embalmed heads he showed the audience, proved that these persons could not have lived before the 18th dynasty, it was this blackening substance which had altered the primitive Caucasian color of their skins; for a beautiful female fixet of the olden time he held in his hand, still preserved its light brown hue, having probably been emblanced before bitumen was introduced.

He pointed out an engraving of the munmified head of a Negress, from the "Crania Ægyptiaca" of Dr. Morton. This relic be stated had been found by himself in a tumulus at the Island of Degle, 1st catanact, in 1840; and was the only munmy of an unmixed Negro or Negress that he had ever seen or heard of among the sepulchers of Egypt.

"In the study of Oriental antiquity," continued the lecturer, "we possess on single criticoin, in applicability sufficiently universal, wherewith to test the advancement a given people may have made, so felicitously simple as dust chemical recipie formulated by a recent Serva; viz.," that the crititization of a given European aution is in direct proportion to the gallous of subjaturic act by its pepulation annually command: "—are on any of subjaturic act by the properties annually command: "—are on the properties of continued to the properties of the properties of

"Nioid: antiquity, alsa! affords us no such tonebatone for ascertaining the extent of its civilization as suphwire acid, or sopp." Its development in arts and sciences must be measured, not by any one feature of social polity taken singly, but through the judicious union of the multiform elements that combine to unfold to us the maximum of progress which, at successive epochas, the Egyptians had attained. Yet, were veto select one subject that, more than any other, from the all-comprising granders and desired function of the maintenance of the subsection through policies in the two subsection through policies in the two subsection through policies in the two subsections are subsection.

sculptured seriatim on stupendous Karnac-(a vast cycle of time, in which, so far as Egyptian annals he concerned, the early antiquities of Judsea, Greece and Rome, are hut parentheses-things which can be omitted without much detriment to the sense)-that subject is Mummirication! In geographical range it ascends the Nile 1600 miles from the Mediterranean to Meroë ; resting its Eastern wing on the hypogeums of Midian and Idumea ; while its Western follows Libvan affiliations, through the Oases and Numidia, perhaps to lose its last forms among the hapless Guanches, whom Portuguese cruelty extinguished, during the 13th century, at the Canary Isles of the Atlantic. In chronological duration, mummification, as has been shown, antedates all human history, all monumental record; and accompanying its phases down to the 7th century, A.D., we behold it embracing, within its mysterious circumference, a period of man's funereal necessities exceeding 5,000 years. In numerical amount, and its consequent bearings upon the statistics of population, we find, that Egypt alone furnishes data whereby the incomprehensible term of 500 millions of buman mummies fails to convey an idea of their incalculable number."

"Mr. Gliddon closed by an eloquent allusion to the people of this by-gene time. Before him lay the nummied heads of a man and a woman; the foot of a girl, and the gilded hand of a lady. To these be referred in thrilling language, to which our space, (Mobile Tribune, 27th February, 1948,) not admitting our doing justice, we give hut a near outline of its substance."

Enquire of these parched and shrivelled lips, what were their owner's vocal articulations—what his modes of thought, his diurnal avocations, and his nocturnal pursuits?

The gentle owner of this exquisite foot danced in girlish gladness to the sounds of harps which were struck long ore David sange. For we have painings of harpers and harps in the tomb of Ramses IV, at Thebes, in the fourthern central part of the structure of th

Or ask this scorched though gilded hand, to trace in hieroglyphics upon papyrus paper the memoirs of a lady, whose will its delicate fingers oheyed at a date when the Hebrews possessed no alphabes, and when the Pentateuch was yet unwritten.

Albeit these détris are to us but the types and emblems of a vast family of the human race; that, while Orena natingity was yet young, and Roman non-existent, numbered myriads of population—faint shadows are they, and partial indices, of a colossal nation, the grand parent of civilization—that discovered the germs of all present arts, constructed mighty and imperishable works, and transmitted to the Classyollios school those precious decuments, though the deciphening of which the glory of Egypt now results brilliantly from her translated hieroglyphics, and gives her annals the highest place in the pages of the world's history. In this man's skull, one which, after 3,000 years of time, so perfect is his embalment, would be recognized by us as an old acquaintance had we known his in his life-time, we behold one of carselvers—a Caucasian, a pure white-man; notwithstanding the hitumen which has hickened the skin. The same with this female head, of a girl of fifteen, whose hair, reddened though it be bye embalment; is soft and silky still. How surprised would both of these individuals be, could we recall them to life, to learn that we moderns have cartally speculated in learned works, whether their countrymen were Africans or even Negroes—whether the color of their skins was not (as the Egyptian makes and females are pinted on the mountents), orimon, or yellow; tor, black as they now are with bituminous saturation—whether their cars were not placed on their heads higher than our own, even if they were as long—whether their feet were really canoe-shaped with the hollow reversed—or their hair actually woul!

Could a people gifted with such facial angles, elevation of forehead, smooth hair and aristocratic noses as these, fail to be great men and great women?

Was it in nature, or are anatomical laws so false, that a people with such physiognomical and osteological characteristics—a people whose mighty deeds are still creet in stone, and who are renowned beyond all others in sacred and profane history for their prison—should not possess a development of head and volume of brain commensuates with the grandeur of their works?

In the face of such matter-of-fact and tangible oridences as are extant in the manmines themselves, corroborated by paintings, sentlytures and records of every age and variety, eavils are vain—denials become childish. These pictorial illustrations, faithful copies of Nilodie monuments, are, as Lurnaouss* observes, "the contemporanous testimonies that seem to spring up out of Egyptian bumanity, and those plates of the "Crania Ægyptiane" enables us to realize with Monrow, the actual existence, in the year 1817, of Egypt's "wast sepulchres, whence the dead have arisen, as it were, to bear witness of themselves and their country," [Vide "Recuelled Inscientious Greques de PEgypte," Paris 1842, Introduction, p. xilii —and "Crania Ægyptines," Philadelphia, 1814, page 1.] †

While shee lines are passing through the printer's hand, the Parisian preservery the mournal intelligence of the demise, on the 15th inst., of this illustrious and most excellent gentlemen. The world of sciences has to deplore the loss of one of its highest ornaments: European exhabetacy, that of her hrightest luminary: Egyptian studies, through Lernoxox's decessa, that of the "printer parison" and the partners. As one wis has been honored with many proofs of humble tributes of respect to his memory, coupled with unaffected serrow at the death of a friend whose kindnesses are too prized to be forgotten—CR. Ro.

78 LETTER

TO MR. GEORGE R. OLIDDON, ON

VARIOUS ARCHÆOLOGICAL CRITERIA FOR DETERMINING THE RELATIVE EPOCHS OF MUMMIES.

> From SAMUEL BIRCH, Esq., of the British Muscum. (Appendix v. referred to ubi supra, page 303.)

DEAR SIR.

THE attempt to lay down a few general diacritical rules for the determination of the ages of mummies may not prove unacceptable to you; although I cannot, in a short space, give all the intermediate steps on which the results of my investigations are based. These depend mainly on philological considerations; and one, not the least in importance in this respect, is nomenclature. It is an important law, that the officers of court, and other personages of consequence, out of flattery to the reigning monarch, named their children after him; and accordingly we never find an APRIES in the epoch of the twelfth, or an OSORTESEN at the twenty-sixth dynasty. This is a fundamental rule, to be borne in mind, when considering the epochs of mummies. The persons named Apep-Amenemha-Usrtesen - Thothmes-Rameses-Psametik, must have been born in the reigns of Monarchs having these names : conse-

African or Asiatic origin of the Egyptian race has been irrevocably settled in favor of their Caucasian derivation; a conclusion that now ranks among "les faits acquis à la science.

Others, it is rue, (see Chapters, p. 28,) had advanced options in support of the Assiste origin of the denizers of Egypt.—Parricaxer (* Egyptogram 1966, 1964, p. 186). A politic origin of the denizers of Egypt.—Parricaxer (* Egyptogram 1966, 1964, p. 186). A politic originary of the Assister, and Law Assister, and Egyptogram 1966. The Assister of South, introduced advantage in Egypt by an Asiatic people. This view had been previously advanced in the adminishe works of De Barcoraxer, (* Histoire of Jacon, (* Pherolutions der Peoples de Palas Moyesme, * Paris, 1839; 1., page 15.) and a century age the produced academicina Forenstorn had contact that "lea Egyptiers, pour les trois quarra, servicient on de l'Arabico on de la Pendent de Palas (* Egyptiers, pour les trois quarra, servicient on de l'Arabico on de la Pendent de Palas (* Egyptiers, pour les trois quarra, servicient on de l'Arabico on de la Pendent de Palas (* Egyptiers, pour les trois quarra, servicient on de l'Arabico, and trois de la Pendent de la P

whele speak the same rongue. Ima, nor Campie, the Hostown, who are use ma-sistem centrals, though scattered over the earth, have preserved their blood pure-sistem centrals, though the control of their original tongue, and now adopt as their own the language of every nation among whom they squirme. At the Island of Madagascar, three different roses of mankind, Cancasians, Negroes, and Malays, notwithstanding the diversity of their respective origina and balatias, nuities in the use of disclete of one and the same tongue. While, if language alone, uncorrected by the more positive science of oraniological anatomy, were to be taken unexceptionally as the criterion for establishing primitive identity of sanguineous origin, among races of men at this day atterly distinct, a thesis might be sustained, by some skilful philologer, that the natives of Paris were originally Africans, because the Negroes of St. Domingo quently the fashions and formulas which prevail on the coffins of these persons may be safely referred to these epochs. Another law not less safe is the presence, in the incriptions, of particular characters, which do not appear in the hieroglyphics, till certain epochs. I shall subsequently allude to some of these. The subject may be roughly divided into ages, as follows:

I. Pyramid age :- From the Third to the Twelfth Dynasty.

The sarcophagi, mummies, and other sepulchral remains of this age are comparatively few. Not only have the haughty pyramids attracted the cupility of the plunderer, and their remains been despoiled of their dead, but even the veat cemetry of Memphis has been empired of its tenants by resurrecionists and jackals at a time as early as the Oreck rule. The distinguishing feature of this age is its great simplicity. The sarcophagus which held the nummy of Chrore's is plain lost at sew, was a rectangular check, decorated only with the representation of the portcullises or door-ways. The inner sarcophagus was to wood, apparently a kind of cedar, inseribed down the body with the ulines of hieroglyphics, but without any figured representation. This inscription, which occurs also on coffins of an epoch much posterior, is a speech taken out of the drama or mystery of the Osiris-mythos, and is a speech taken out of the drama or mystery of the Osiris-mythos, and is

Pickarsio, ("Beres," pages 277, 278).

love of science as to the truthful candor of his heart.

"A most interesting and really important addition has help been made to our knowledge of the physical character of the ancient Egyptians. This has been derived from a quarter where local probabilities would least of all have induced to the property of the control of the probabilities would least of all have induced to the control of the immense advantage of wealth and the partonage of government, to researches into this subject; in England, possessed of the immense advantage of wealth and consumeral resources; in the academies unusuant, exactely anything has been done since the time of Eliumenthech to chicalte the physical history of the nanche Egyptian race. In none of these countries have any extensive collections been formed of the materials and resources and the control of the state of American Philosophical Scates of American that a remarkable daviancement of this part of physical science has been at length achieved. "The Transactions of the American Thilosophical Scategia" (Vol. 14, New Serie, Bart, 14, Article 5) 11444; o totatin a memoir by distinguished by his admirable researches into the physical character of the native American races, ("Cruzia American," 1859, has brought forward a great mass of new information on the ancient Egyptians. ("Patenzan, "Appendix to the American 1864, to American 1

the address of Isis over the recomposition of the limbs of Osiris. The appearance of this mythos at so early an epoch is singular, as showing the extremely remote era of its development. I here give a revised translation of its import; " Osirian king Men-ka-Re, live for ever! born of the heaven, [beloved] issue of Seb-thy Mother Nutpe (the firmament) is spread over thee, in her name of the extent of the heaven; she has accorded thee to be as a god-annihilated are thy enemies King MENKARE, live for ever!" The only other coffins and mummies referable to the period of the fourth dynasty, are those of the workmen These were plain uninscribed employed in the Tourah quarries. sarcophagi, containing dried bodies, only enveloped in coarse woollen and matting wrappers; resembling the body found in the chambers with the fragments of the wooden coffin of the King MENKARE, the authenticity of which bones however has been questioned. There are no sarcophagi or mummics in Europe referable to so early a period; and we are consequently without the means of determining, from these remains, more than the fact of the application of the Osiris-mythos to the deceased; coupled with the absence of bitumen, and the simpler

preparation either by salting or desiccation.

Of the period which intervenes between the fourth and the eleventh dynasty there are no mummied remains, in Europe at least-although tombs executed for individuals who flourished in the fifth, sixth, and subsequent dynasties, as well as considerable monuments of the intermediate period, have been found: but of the eleventh or ENANTERS we possess at least three coffins, discovered in the sepulchres of that family at Gournah. I infer that the Enanters were the eleventh dynasty from the fact of individuals, bearing this name, being mentioned on their funeral tablets as deceased in the reigns of Osortesen I of twelfth dynasty,; an example of which may be cited the Tablet 562. Brit. Mus., of a person named Nuentef, who died in the 39th year of the reign of Osortesen I. The chief of these sarcophagi is that in the British Museum ; giving, from its appearance, the highest prestige of the arts at that period. The eyes are inlaid with obsidian and ivory in bronze lid. The upper part of the body is richly gilded; and represents a vulture, or hawk, overshadowing the form with its wings. On the body are two lines-two speeches from the Osiris-mythos, or drama, (Trans. Roy. Soc. Liter. vol. II. Pl. xiii.) "King NUENTER deceased-we place thy arms as Osiris, we accord thee a good embalment, and thy heart to be in thy belly. Say Isis and Nephthys." Again, on the foot is another speech, "Say Isis and Nephthys; We come to unite thy limbs for thee, O King NUENTEF declared true !" Here is at least the key to the old Osiris-mythos of the scattering of the limbs of Osiris, and his destruction by Seth-a legend as old as the eleventh line or dynasty : but should any doubt exist on this point, I can cite two other coffins of the same line of NUENTEF discovered at Gournah. It appears from the inscriptions on these sarcophagi, that one of the NU-ANTEFS, the NUANTEF-NAA, received his embalment at the hands of his brother NUANTER. Both their coffins are feathered like that of the British Museum, and they bear a single line down the body. On the coffin of the NUANTEFNAA it is a dedication to certain divinites; on the other

coffin it is the address made by the so-called Solar abode or Horizonwelcoming the deceased into its bosom. On the foot of each of these is the address of Isis and Nephthys, part of the same Osiris-mythos-There is another coffin of the same epoch, with the hlank space left for the name of the individual, scooped out of a single tree, in the National Collections. It contains an ordinary sepulchral dedication; hut it resembles the royal coffins from Gournah in this respect, that it has, like them, the whole of the hody decorated with feathering, although of course of a more ordinary description. These are all in the usual mummied form, with the usual head-dress; and are apparently the inner coffins; for from the pyramidal epoch the mummies were deposited in an inner case, which was, in its turn, enshrined in an outer coffin or The examination of the interior of the coffin of the King NUANTEF by Mr. Hogarth was productive of several curious facts. It was lined or pitched with a resinous substance, remarkably fine and brilliant, apparently a precious or valuable gum. To this portion the outer linen wrappers of the king had adhered; and when detached were found inscribed with hieratic writing, on which the king is mentioned. The Museum coffin of NUANTEF is richly gilded, and is evidently the casing of a monarch, but all are identical in their art. I only knew of one coffin in Europe, of the age of Usr-T-ESEN I, or of any monarch of the twelfth dynasty, viz; that in the Museum of the Sta. Caterina at Florence, (Lepsius, Ausw. Taf. x.) It is evidently an outer sarcophagus -has four upright posts at the corners-is decorated with symbolical eyes-and has five lines of hieroglyphics. I suppose Chev. Lepsius considered this coffin contained an allusion to the joint reigns of Usa-T-SEN and AMENEMHE-but I must confess I do not see what relation of this sort it bears. It contains the address of the Horizon and its welcome to a deceased AMENEMHA SNAB; into whose name enters the cartouche of Amenemba in composition. So short and elliptical is this inscription, that it is difficult to pronounce what is intended by the two lines on the right side; but, at all events, it is referable to the twelfth dynasty, which is sufficient for my purpose here. Under the succeeding dynasty of the Sebekhepts—the Mentunepts

-and the Neferherts-the outer coffins still retained the same rectangular shape, and were decorated externally with symbolical eyes, and large hands of hieroglyphics-dedications to various divinities. The sides are generally covered with a species of hieratic writing; containing rituals similar to the Todtenbuch of Lepsius-and which probably at this period were used instead of Papyri; for I have never seen any Papyri of this age. Round the sides are usually painted the whole sepulchral equipment of the dead-his bows, arrows, quivers, shirts, wigs, mirrors, sandals, and cosmetics. They are in fact the pictorial portmanteau of an Egyptian gentleman, twenty centuries before our era, as well as a hill of farehis ducks — geese — haunches — shoulders — chops — bread—cakes hiscuits-flour-his drinks-water-heer-wine, white, northern, or Maræotic-his salt-and pastiles, are detailed at the head of these coffins. In art they are excellent, but somewhat archaic; more so than the later coffins of the eighteenth and twenty-sixth dynasties : hut the great test is the formulæ which are distinguished by the elliptical turns of expression. On certain tablets of the twelfth dynasty, these same bills of fare are found; and the stone revetment of the brick Pyramid at Dasboor bad also the same.

The most important of these coffins are two in the British Museumone in Berlin, figured in the title-page of S. Passalacqua's catalogue : and one published by Giovanni D'Athanasi, now at St. Petersburgh, and another dated in the reign of Sebekemsar, at Levden. There is every reason for supposing that the SEBEKHEPTS arose towards the close of the twelfth line. On the tablet, dated in the reign of the two last monarchs of the twelfth, in the Louvre, are mentioned two individuals, one named Usr-t-sn, the other Sebekhept (Lepsius, Ausw. Taf. x.)-A tablet (Sharpe. Eg. Inscr. Pl. 104,) of a person named Sebekhept is also dated in the reign of AMENEMHA II. But the most decisive document is the inscription lately published by M. De Rougé, in the Revue Archéologique, September, 1848, of Ransnab, a military officer, who, under one of the SEBEKHEPTS records, that he was about to repair the Port of AMENEMHA III, then stated to be deceased. From which I would infer, that the SEBERHEPTS were successors of the AMENEMHAS. The mummies found in these rectangular sarcophagi are, according to Passalacqua, Æthiopians. They are scarcely more than salted, readily drop to pieces, and have not, that I am aware, been removed to Europe. Of the period subsequent to the twelfth dynasty, are t. o coffins, one an outer case, and another in the Museum of Belfast, a lithographical plate of which has been published by Dr. Hincks. This is of a person named Tes-mut-heri, who traces her descent in the following lineage :-

Harsiesi (priest of Amen)

Auf nsa wa (military chief and sacred scribe)

Ra-ma-tu (priest of Munt, and sacred scribe, priest of Amen-ra in Thebes.)
Ta-mut-sher (her mother.)

Tes-mut-ber.

As Aufnaawa and Ramatu are also the names of two kings, the first mentioned in the Turin Papyrus, and supposed by Chev. Lepsius to be a successor of the twelfth, while RAMATU is the prenomen of the last king of that line, Dr. Hincks contends that AUFNAAWA was a predecessor and not a successor of the twelfth dynasty. The outer coffin of this individual contained only two deeply cut lines of hieroglyphics, the commencement of the 54th and 56th chapters of the ritual : " Oh Atum ! give thou me the sweet breath (which proceeds out) of thy nostrils .. " This shows the Ritual to have been compiled from documents as old as the twelfth dynasty; and that it is not so recent as some have conjectured. The interior case of this mummy was painted with the representation of seven divinities who confer the usual benefits on the deceased. At this epoch, then, the mummy cases were decorated with various deities in compartments-a style which, as will be subsequently seen, prevailed till the very close of the Egyptian monarchy. The coffin, in the collection of the British Museum, which much resembles that of Belfast, is an outer sarcophagus, cut in deep hieroglyphics, and in a plain style. It is of Nas-baenteta, a priest of Munt-ra, son of Pankhi: and has down the front the 26th chapter of the ritualthat of how every one offers his heart in Kar-neter, or Hades. Round

the sides is the 26th chapter, which has been partly translated by Dr. Hincks. It contains beculiar dogma, connected with the Orphic cosmogony-"I," it says, "am the egg of the great cackler. I have protected the great egg laid by Seb in the world; I grow, it grows in turn : I live, it lives in turn : I breathe, it breathes in turn." This chapter, of a mystical import not easily explained-referring probably in its internal meaning to the performance of certain moral dutiesis peculiar to the coffins of this cooch; at a later period it does not appear. No inner case, or mummy, is in the Museum collections belonging to this case, so that there are no means of determining what processes were adopted at this period. The scarabæus of the King SEBEKEMSAF, which is in the British Museum, shows that at this epoch these amulets were placed on the heart of the dead-it contains the usual formula (Ch. 30, Taf. xvi. Lepsius Todtenbuch,) which is ordered to be engraved and placed on the heart of the deceased; and the reason was this, the scarabæus expresses the idea of transformation or transmigration (kheper), and alludes to those which the deceased was called upon to perform before he could offer his heart. It is another proof of the high antiquity of the Ritual and its doctrines. To this period I would also attribute the commencement of the use of sepulchral vases, (miscalled Cunopic,) which are in the form of the four Genii of the dead : who presided over the four quarters of the Compass, N. S. E. and W., as at Medinet-Haboo; and in which were deposited the viscera separately embalmed; -scattered as it were through the world.

II. From the Eightcenth to Twenty-sixth Dynasty.

I cannot, at this particular moment, recall any coffins, that I would refer decidedly to the commencement of the eighteenth dyn., i.e., I do not know any dated, either in the reign of Amosis, or of his successor AMENOPHIS I.; yet it cannot be supposed that no coffins exist of this period, when the best hypogees of Thebes and Abydos were executed, and when many of the finest tablets in the museums of Europe were sculptured. Perhaps to the carly period of this dynasty is to be referred a rectangular sarcophagus of a person named Amenophis, whose name has been inserted into a blank space, as if ready made. It is of sycamore, rudely sculptured with lines of hieroglyphics, in deep blue upon white ground, containing dedications to certain deities. The name and shape suggest that it may be an outer coffin of this period, for the square chest is found as late as TAHRAKA. Another coffin, at Turin, on which a deceased Tehamen is represented adoring the family of AMENOPHIS I., is also probably of the same period, as the family details there given are incompatible with the notion of its being merely the last narrow home of a priest of AMENOPHIS I. On a coffin of a mummy unrolled at Jersey, the name of AMENOPHIS III. is inscribed; and also on a fragment of another in Mr. Sam's Collection, where the king is represented as a sphinx. On another coffin, in the British Museum, the deccased is represented worshipping this monarch. The question about these sarcophagi and coffins is, whether they are contemporaneous with individuals who

died under these monarchs, or of local priests attached to the worship of this monarch at a subsequent period. The probability is, that they are the inner coffins of individuals who lived about the commencement of the eighteenth dynasty. They differ considerably in style from the coffins of their predecessors. Till the close of the twelfth, Divinities rarely appear in the tombs or on the sarcophagi; they are mentioned, and are figured in the public tablets and exvotos, but rarely on sepulchral monuments. At the commencement of the eighteenth dynasty, however, the religious system of Idolatry had attained a full development-all the Gods are represented. It is impossible, however, to give here all the varieties of representations which characterize the eighteenth dynasty, as much depended on circumstances with which we are at present so unacquainted, that they appear almost caprice. There are, however, some general rules as to style, which are important as distinguishing this epoch. The mummy cases are principally of sycamore, colored with a white back-ground, and divided by bands into divisions, in which are figured various sepulchral divinities, painted in appropriate colors, for which especial directions are given in the rubrics of the chapters in the ritual, (Todtenbuch.) These bands cross at right angles, and are intended as a pictorial representation of the external swathings of the dead, and are covered with hieroglyphics. On the chest is Nutpe or Menpe, the Firmament, the mother of Osiris, and the inscriptions never fail to record an address to this goddess. Round the chests are occasionally representations of the regions through which the Sun passes. There are occasionally adorations to local deities, such as the Bull of Phtha Socharis, and the Cow of Athor. Unfortunately, the Arabs have played such tricks with mummies, and so changed the original tenants of the tomb, that it is not possible to know whether the various mummies belong to their respective sarcophagi, unless there are corroborative circumstances, and inscriptions on the cartonages or bandages. A box for holding scpulchral figures, dated in the reign of AMENOPHIS I., belonging to Mr. Curzon, shows that the custom of depositing them had commenced as early as this period.

Several memorials exist of the sepultures of the middle period of the eighteenth dynasty, such as the sarcophagus of Amenophis III. still existing in his tomb---but unpublished---and the sarcophagus of one of his successors, the so called Sk'HAL, in the shape of a rectangular granite chest, having at the corners the female deities Isis, Nephthys, Selk and Sati; the inscriptions are prayers to Nutne, and other female deities. There is a mummy in the British Museum of a person named Har em hebi, which is possibly of the age of Honus; it is covered with a cartonage or linen case laid over the bandages, colored blue and gilded--containing the Judgment Scenc, and other sepulchral deities. Another coffin of a person named Ten-en-Amen, also in the same collection, may possibly be referred to the age of the eighteenth dynasty; still the memorials of this age are comparatively few. At this period the dead were provided with Rituals or Funeral Papyri. The black bituminical process probably commenced at this period, when foreign conquests had opened Palestine, and Mesopotamia to Egypt, and unfolded their mineral pitch, and the spices, and condiments of Assyria and India. Yet it is remarkable that while numerous tombs of this epoch remain, the mammies have totally disappeared, nor can half-a-dozen, dated in the reigns of the monarchs of the eighteenth dynasty, he pointed out in the Museums of Europe; the sarcophagi of the monarchs of the eighteenth dynasty, were decorated with representations of the Sun-mythos - the passage of the Sun through the twelve hours of the day, and those of the night. The Sun passes in a Bark always accompanied by seven deities who differ according to the hour, and who appear to represent the moon and planetary system. This, which forms a clue to the mythology of the eighteenth and nineteenth dynastics, shows that at this period the twelve great Gods of Egypt, were the personifications of the Sun in the respective hours, and those of the twelve hours of night the lesser Gods. At each bour the sun assumes a new type in the Pantheon : he is Horus in the early hours of dawn : Ra at midday; and Atum at sunset. That hitumen was used at this period is obvious from the following consideration : the wooden figures of the tomh of Sernos I. are coated with this substance, and it is fair to coniceture that it was then used in emhalming. The earliest figures I have seen of the sepulchral kind are of the age of Amenophis III., and the use of these little figures, which has not been explained, appears to he in connection with the idea of the human victims which in primaval times were offered alike hy Greeks-hy Chinese-by Germans-and hy Egyptians, at the tombs of their ancestors, and for which the progress of civilization substituted images. The figures all contain one formula horrowed from the sepulchral Ritual (Lepsius Todt., c. 6, Taf. ii.); "Let all that the deceased has done," it says, "he reekoned and told-how he has dug the fields-sown the fields-watered from the wells-and hrought the grain of the West to the East." This seems to show that these wooden dolls were the mimic husbandmen of the Elysian fields or Hades, and were intended to aid the deceased in his labors there-

Of the succeeding dynasty-the nineteenth-i.e., till the age of the successors of RAMESES MIAMUN, dated memorials are equally scarce : one of the most important is the mummy at Leeds, dated in the reign of RAMESES IV.; an elaborate description of which has been published hy Mr. W. Oshurn, Jun. Unfortunately I have heen unable to procure a sight of this dissertation, and I am consequently unable to pronounce on the tenor of the inscription. From some hieroglyphics, &c., communicated by Mr. Osburn to me, it appears to have been most elaborately painted, prohably like the coffin of Hor the incense hearer of Amen-Chnumis, in the British Museum; for the use of the Jackal in the sense of Son upon that coffin, fixes it to that period. One peculiarity appears at this age-the use of stamped leather handages, having on the stamped portion the names, and titles, or figures, of the Monarch. a custom which prevailed till the twenty-second dynasty; -- as similar handages of Osorkon, I. and II., and of RAMENKHEFER the Son of PAISHEM, king of the twenty-first dynasty, are in the Louvre; but there are few mummies, comparatively, even of this epoch, and most are to be referred to the twenty-sixth dynasty, and subsequent rulers.

But of the epoeb of the twenty-seventh dynasty, there are undoubtedly

several mummies (most of the green basalt sarcophagi are of this age,) in the national collection. In the museum at Florence, is the outer and inner coffin of a nurse of a princess of the house of TAHBAKA; and in the British Museum, are the outer and inner coffins, and cartonages, of a judge of the Palace of the queen AMENERTAS, the head of the twentysixth dynasty. These coffins are peculiar : the style is coarse and indifferent, the inner coffins have the usual representations, the hawk of Numm -the Judgment Scene, with variations in the Hall of Osiris-and the various sepulchral deities. The back-grounds are generally of a bright yellow-the hieroglyphics linear and boldly executed. At the foot of the cartonage, Apis is represented bearing off the mummy of the deceased; the body is wrapped in bandages, the outermost dyed salmoncolor, in the carthamus tinctures, and the blue networks of bugles representing the reticulated dress of Osiris; the chapter of the great egg has disappeared, and in its place the seventy-second chapter of the Ritual (Lepsius, Todtenbuch, taf. xxvii., c. 72,) is substituted: "The chapter of departing from the daylight, and passing through the (mah.)" The subject of this chapter is as follows :- " Let this chapter be learnt while on the world, and let it be painted on his (the deceased's) coffin. It is the chapter by which he goes out of light in all his appointed transformations, and going to his place, is not turned back; and there is given to him bread and beer, and slices of flesh from the table of Osiris. He will go to the (mah), and there is given to him corn and barley in it, and he is in it as when he was on the world, &c," The whole or portion of this chapter will be found on several coffins of this period; such as those of Petenesi, (Egyptian Salon, B.M. 3,) of Hapimen, (B.M. 16,) and another (copied by Mr. Bonomi) found in a tomb of the Saitic dynasty. The interior of the coffin of Hapimen, indeed, as well as that of the sarcophagus of Necheherthebi in the B.M., as also the external part of two other coffins of a later epoch, have the forty-second chapter of the Ritual (Lepsius, Todt., taf. xix., c. 42,)—the supposed dedication of the limbs of the body, but rather, in my opinion, the mystical description of the deceased, viz., the back of the Osirified, i.e., the deceased, is the Menpe, or Nutpe, i.e., the Firmament; his face is that of the Sun : his eyes (are those) of Athor, &c. : his fingers and nails are living Uræi, i.e., in the shape of living scrpents. The inner cases of this, and of a succeeding period, are rudely painted on a white ground; in it are the Hawk of the Sun, the Scarabæus of Numra, the Judgment Scene, (the vignette of the 89 ch., Lepsius, Todtenbuch, taf. xxxiii.,) that of uniting the soul to its body, the deities Sate-Selk. The mummies of this and the subsequent period (for this, or a similar style, continued till the Roman Empire) are all of the black bitumenical process, and those unrolled in Europe have not produced objects of importance. Their formulæ continue nearly the same; they are provided with cartonages, beaded work, and festoons of enamel: one of the most important is that of Nekbharheti or Nectabes, -a high priest of Amen, in Thebes, of the same epoch as the monarch of that name, -most elaborately gilded; and with a cedar coffin, whose interior contains a zodiacal heaven, and the passage of the Sun through the twelve hours. This is the earliest zodiacal projection seen on any sarcophagus, but it was repeated at the Roman epoch, although the reason of its appearance is far from decided.

III. Ptolemaic and Roman period to the close.

No data have yet been laid down for the determination of mummies of the Ptolemaic period. A mummy unrolled by Giovanni D'Athanasi, at Exeter Hall, some years back, was of this period. It was covered all over with a linen shroud, on which was traced a Hieratic ritual, with vignettes. The arts, however, were rapidly ehhing away, and as those of the undertaker were never pre-eminent, they became more degraded than any other. Several tablets of this age mention that the process occupied seventy days, as stated by Herodotus. The process of gilding portions of the flesh, and of sheathing the fingers with silver plates, is probably not older than this age. About the age of AUGUSTUS a great innovation seems to have been introduced in the embalmment process; the shape of the sarcophagus was changed: it neither resembled the human form, as it had done, from the eighteenth dynasty till this period, nor the massive chests anterior to the twelfth dynasty, They consisted of flat boards over which is placed a large wooden vaulted cover, like a dish-cover, with upright square pillars at the corners. The sarcophagi of the family of Cornelius Pollius, of Thebes, represents, on the exterior, the Judgment Scenes, and in the interior the Zodiacs in Greek fashion; at the foot of the coffin is the goddess Menpe or Nutpe, the firmament ; the ritualistic formulæ differing entirely from any yet described. The mummies at this day are not wrapped up in the human form, but made of an equal thickness all down, and covered with an external wrapper, on which usually is coarsely painted the figure of Osiris, Nutpe-and also the portraits of the deceased, with a legend deduced from some formulæ differing from those at the earlier epoch, Occasionally a portrait is found over the face, painted on thin plinths of cedar. Greek rites are introduced; the jaws are tied up, the mouth is covered with a plate or loaf of gold; wax ornaments are placed on the knees. To this epoch are also probably to be referred the tin plates with the solar eye placed over the flank incision. Two of the latest mummies of this class are those in the Augusteum at Dresden, which are evidently from their decorations, executed in bas-relief on their stucco coverings, as late as the time of Constantine, if not indeed a century later. At this period the body appears to have been less carefully prepared, and the quantity of hitumen used at earlier periods discontinued, and a preparation more dependent upon natron adopted. Unfortunately, little discretion or criticism has been hitherto employed in reducing the different modes to their several epochs, and identifying them.

I remain.

Dear Sir,

Yours very faithfully,

SAMUEL BIRCH.

London, 23d Dec., 1848.

LECTURE VIII.

The Art of Mummification, concluded.

ORIGIN OF ANIMAL WORSHIP, AND EMBALMENT.

Ms. Gussoor resumed the subject by a brief recapitulation of the heads of his previous discourses on Musmigation, and then went no to describe how there were three classes of musmies; the first of which cost 1,202 dollars—2250; the second, 500 dollars—600; and the third, or cleapest, the dollars—6 £4. There was a great disparity between the cost of musmification in the two extremes of society. The dried copys of the humble quarryman was merely saturated with natron, baked in an oven, swathed sometimes in woollen raps, and covered with palm hamaches and papyrus mating; while on the body of the wealthy prelate were lavished the most expensive spices and perfunes; after which it was wrapped in many hundred yards of the finest tissue, and placed in three coffins, all sculptured, painted, gilded and cannelled, with a superfulity of extravagance.

Minimies still exist, whose bindages, which in the generality of first-class bodies vary from ten to thirty folia, have been known to reach as many as furty-siz folds round the corpse, containing above 1,000 yards of cloth; the weight of which exceeded forty-siz pounds of finan-varying in exture from good calico to superfine cambrie. The celebrated minimy brought from good calico to superfine cambrie. The celebrated minimy brought from your financial control of the size of the size

The great majority of munmies, however, belong to the middle calasawhose cost is estimated at 300 dollar; though, when we take into consideration the little comparative cost of children's munmies, they must have falled below that average. In order to be entirely within bounds, Mr. folidon assumed the average cost of preparing a munmy at twenty dollars, which, considered in connection with the population and probable annual mortality of Egypt, would give an expense for munmification of 3,380,000 dollars per annua, convicuent to 5000,000 settling.

[•] In the times of Discourse, or n.c. 40, the population had fallon off from its former maximum of ogish millions, prior to the Pensia rasion and the Greek rule. Bosson oppression, followed by the well-known destruction of human like during different epochs of the Sarcesice, Ottoma, and Memolok dominations, reduced it still more: hut even in the last century, just hefore Navolacot's expedition, 1789—1802, and about the time when Monathene Alt as this foot in Egypt, the oppulation exceeded there millions, and probably approximated to four. Jis like destroying ways, in high-rate years, had minimated the helphess Egyptians to about the contraction of t

The whole of this huge revenue passed into the hands of the *Priests*, who were the physicians, apothecaries, mummy-makers, undertakers, scribes, and sextons, and who besides leased out the sepulchral excavations in which the bodies were to repose.

Basing his estimate on the ingenious calculations and curious statistics of HENRY, ("L' Egypte Pharaonique," 1846, vol. ii., pages 182, 430, &c.,) Mr. Gliddon referred to the immense amount of linen cloth which was annually employed as an eavelope for mummies. He showed several specimeas of this cloth, which, he said, was once supposed to be cotton, but is now proved to be linen.* With this cloth the mummy was swathed with great care and regularity, in strips or bandages, varying from a few inches to a foot in width. which were applied with all the accuracy of modern surgery, the inequalities being filled out with pads and compresses. Of the quantity thus used the amount, as above shown, was sometimes enormous. In fact, as the Lecturer very justly remarked, everything in Egypt was on a gigantic scale, with the exception that there were no " giants in those days," the word " giant," in our Bible, being an erroneous translation of six different Hebrew words, (Nephilim, Ghiborim, Emim, Rephaim, Analim, Zamzumim, &c.,) none of which in that language, however misconstrued in the versions, ever were intended to convey the idea of men of outrageous or impossible stature. On the contrary, the Egyptians, as a people, were under our average size, being less than five feet six inches in height. The length of life in Egypt, even in days long before Abraham, being the same as our own, (proved by innumerable sepulchral tablets, the reigns of kings, and the skulls of the mummies,) it is presumed that the Nilotic population renewed itself once in thirty-three years, which would give an average daily mortality of 274 persons, adults and infants of all grades of society.

Admitting, for the wrappers of each individual, a mean of three yards square, certainly by far too low an estimate during the flourishing period of

^{1,700,000,} when I left Egypt in 1811 :— CCf. my "Memoir on the Cutton," pages 9' 28, 27, 39, 40; and "Appeal to the Astisparties," 1841, pages 21 to 24, 184 50, 1845. the eighteenth to the twenty-second dynastics, we find that 2,466 yards square per diem, or 900,390 yards square per annum, of linen cloth, disappeared into the tombs for the shrouding of the dead.

Valuing this cloth at an average price of 22 cents, (one shilling steeling) for fine and coarse qualities, the annual expenditure of the population of Egypt for the cloth consumed in embalming, must have been at the rate of 225,006 dollars, say £45,000 sterling. But the probability is in favor of nine times that amount, if each sparre pard of cloth be valued at one shilling, convincent to £405,000 sterling per annum.

Whatever it may have been, the whole of the revenue from this immense consumption of cloth was also received by the priesthood, or "Sacerdotal Caste,"* who held the monopoly of the linen cloth used in making mummics.

This revenue was, of course, independent of that accruing to the "Sacerdotal Caste" from their possession of one third of the land, exempt from imposts. Besides, each temple had its own grounds, and other vested property, providing comfortably for the maintenance of the priests and their families. (Dionorus I., 73: Herodotus, II., 37.)

From these facts we may derive the true reason why the practice of mummification was so long preserved in Egypt, for more than 3,000 years, as explained in the preceding lecture.* It was one of the principal of many sources of income derived by a pampered hierarchy from the people; and

of 'Administrateur du Collège de France.' At that moment, also, his name stood

highest on the list for the next nomination to the peerage.

"A sharp discussion ensued. The Minister ordered the Administrator to silence OUINET and MICHELET; hinting at the forfeiture of the promised peerage as an alternative. The latter firmly refused to interfere ; maintaining, that it was the ministerial prerogative to appoint to each professorship an incumbent of their own selection; but that after crossing the threshold of the College, each professor was free by the Constitution of this University to lecture as best pleased him—a matter, added the Administrator, of small moment to the Government; because, if a given professor discoursed nonsense, no one would go and hear him; and if he developed science, knowledge would thereby be diffused. In either contingency, no one had the power to impose silence on him.
"The Administrator and the Minister parted in anger, when the former argued

the impossibility of preventing a given lecturer from alluding to topics inconvenient the impossibility of preventing a given returner from slinding to topic inconvenient in frequency of the property of the prope devoted to the "Sacerdotal Caste" of ancient Egypt. This ingenuous writer had perhaps before him the cogent remarks of PHILE-LEUTHERUS ANGLICANUS:—

"But those who advocate the free use of philology in the interpretation of the Scriptures, find their fiercest and most uncompromising opponents in the ranks of those who are alares to the Puritainale Bibliolatry, so common in this country. According to this school, every word in the canonical books of the Old and New Patterner proceeds from a division and mirrarducts invariation; "Court 43."

According to this school, every work in the canonical books of the Utd and Now Testiment proceeds from a driver and mirraculous largeristics 1° (spec 48 Mar. 1888), and school and the school as school as school and the school and t tion have put forward with the greatest pertinacity, united with the most triumphant and derisive scorn; even without drawing a parallel fairly, between the physically-harmless "abominations of the Egyptians," and those atrocities which hundreds of texts in Hebrew annals attest to have been quite common in Palestine in the self-same days. It cannot, therefore, but be agreeable to our readers to have a synopsis of the Lecturer's views on the rationalism of these strange rites and mystified practices.

After exhibiting the mummied animals upon his table, and pointing out a

variety of plates and tableaux suspended on the wall, Mr. Gliddon proceeded to consider the rationale of animal-worship. He conceded freely that when the Greeks first became acquainted with Egypt, in the fifth or perhaps the sixth century, s.c., the worship of animals had become the main feature of the popular faith. Reference was made to the story of the Roman soldier who was immolated by an Alexandrian mob, because be had thoughtlessly killed a holy cat; as well as to the disgust expressed by JUVENAL at the Onion-deity of the Egyptian vulgar in his day. Passages from the Fathers were quoted which manifest their horror at the practice, and their total ignorance of its nature ; none, with the exception perbaps of Clemens Alexandrinus, whose knowledge was very limited, possessing the slightest acquaintance with the Egyptian tongue or writings, nor with Pharaonic doctrines or institutions, At the Ptolemaic and Roman epochs, however, there was no superstition too grovelling for the degraded sons of the once noble Pharaohs. But any one wbo studies the "land of Ham" monumentally, will perceive that this state of moral degradation vanishes as he recedes toward more ancient times. In the decrepitude of her second childhood, Egypt was a very different thing from what she had been more than 3,000 years before, when animal worship was still unknown, or in its commencement. Nor is it historically just to predicate what may have been the usages of the denizens of the Nile during the early pyramidal period, from the corrupt state of the people about and after the Christian era. We are, indeed, told by MANETHO, the only credible annalist of those primitive ages, that the "Bulls, Apis and Mnevis," and the "Goat Mendes" were first "appointed to be Gods" during the second dynasty : (MANETHO, spud Conv., "Ancient Fragments," page 98:)-a proof that this cbronicler did not consider the worship of animals to have existed in the times before. There is no mention in the Pentateuch of the prevalence of animal worship among the ancient Egyptians, except by implication, in the case of the golden calf; while on animal mummification Scripture is silent. And it is now thoroughly established, that the representations of divinities are far less frequent in the sculptures and paintings of the Old Empire than in those of the New. The incipient origin of the worship of animals must be sought for, like that of buman embalment, in still earlier ages, the antemonumental periods of Egyptian history.

Animal worship, the Lecturer expounded as the natural and unavoidable consequence of the misconception, by the vulgar, of these emblematical figures invented by the priests to record their own philosophical conception of abstract ideas. As the pictures and effigies suspended in early Christian churches, to commemorate a person or an event, became in time objects of worship to the vulgar, (without the adorer's being, therefore, denounced as

hereiteal.) so in Egypt the osoteric or spiritual meaning of the emblens was lost in the gross materialism of the behelder. This esteric and allegorical meaning was, however, preserved by the priests, and communicated in the Mysteries alone to the initiated, while the uninstructed retained only the grosser conception.

To perpetuate the esoteric signification of these symbols to the initiated, there were established the Mysteries, of which institution we have still a trace in Free-Masonry.

He cited averan instances to show how abstract ideas, in themselves pure, having, for want of an alphabet, been presented pictorially, became in course of time invested with erroneous meanings by the ignorant and lower orders, even of modern and not uncivilited nations. Among his illustrations of Nilcide Art, he indicated several beautiful designs of the "Winged Globe," and after explaining the many emblens which enter into its composition, he characterized its general meaning to be symbolic-ofigurative of the "Previdence of God overshadowing the land of the Nilc"—an idea which the primoring Egyptians could not represent otherwise than pictorially in the absence of an alphabet.

On this emblem the lecturer dwelled some time, showing how it is often referred to in the *Hobrew's* text of Scripture: viz., in Isaiah xviii., I; Malachi zigna me as old-as the lessamids; that a strictly alphabetic weiting is not found

The Invasilies themselves seem to have had now "winged Globes","—one keeping, in Mindshi is 2 — and the other, a "flery" antitude ones," and effects, as in Accharith "a, i, 2 : verse so utterly tertured, misconstrued, and perceived as in Accharith "a, i, 2 : verse so utterly tertured, misconstrued, and perceived of CLAUCET words, Leanon persented to being their purpor people within the reader's comprehension. These reconflict hillical and mysical connections, together with the Accessive diviewed at Philadelphia, in September with CLOURT, 1817, portions

iv., 2; Ezekiel xxviii., 14; Zeclmriah v., 1, 2, and other places: but, when the ante-monumental Egyptian (5,000 or 6,000 years ago) first conceived the idea of "Providence," he had no alphabet wherewith to write the Coptic synonyme for P, R, O, V, I, D, E, N, C, E, as we write it now-a-days alphabetically in English.

The minds of men in primeval ages were inductively led to the abstract idea of a First Great Cause, whose attributes they defined by a metaphysical system of triads. If the primordial Egyptians had possessed an alphabet,* they could easily have expressed these attributes graphically by names, which in any other way of writing are attended with great difficulties.†

Now, the pure alphabet, i.e., strictly phonetic letters, disengaged from accompanying figurative and symbolical signs, is an invention that can no longer be carried back to the fifteenth century, a.c.; and is not attained to this day by the Chinese, who have written books for 4,000 years. Phones signs are at at the Pyramids: but a strictly alphabetic

of which, at the solicitation of friends, I have condensed into one discourse, at St. Louis, 12th May; and Pittsburgh, 29th May, 1848. When my inquiries are completed, I hope to present the results to the public in a satisfactory shape.

Meanwhile, the critical Hebraist need not be told, that our word angel, derived

from the Latin angelus, transcription of the Greek αγγελος, messenger, is in the original Text, McLAK, plur. McLAKIM, literally, a messenger but that it is missued when the Hebrew gives a totally different word, KeRUB; plur.

In general, the latter, being cognate with Arabic carab, "loss of the sun's rays at setting," &c., refers to the Sua at different stages of his diurnal course, and means also any Star or Planet: for "IeHOwaH resides in the midst of the Kerubim,"-"mounts upon a Kerub, and flies"-which is the reason why they were symbolized by "winged-fiery-disks" upon the Ark of Israelites (as their allegorical

symbolized by wing-to-rely-vasas appoint the Riv til Instantes (as their River) are equivalents occur on the shrines of Egyptian divinities) in Exodus xxxvii, 7, 8, 9.

The SeRaF, Seraphin, (compare Numbers xxi, 8, 9, with 2 Kings, xviii, 4,)
were Serpents, surmounted by Solar Pishs, like the Uraci of Egyptian Sculptures; while the word SeRaF, like a thousand others in Scripture, has besides a double

meaning, apparent and occult, splendour of fire, and Solar light.

The curious can follow these philological researches in the extraordinary works of Lanct; and after being told, that our "moyen age" pietures of Cherukin and Scraphim originate from a misconception of the ancient Hehrew root KeRUB, which was confounded by the Rabbis with the modern Chaldes K-RaBe, "like unto an infant," the reader may bestow a smile of pity upon the current pictorial representations of angels, when figured as bodiless baby-heads, with wings, forsooth, placed where there are no muscles to articulate them, peering from behind their little chubhy cheeks. This artistic method of adding wings to the human shoulders was derived, with other ideas, from Chalden; (see LAYARU'S, or FLANDIN'S plates of Porsepolitan, Ninevite, and Babylonish Sculptures.) The Egyptian artists were wiser and more consistent. They attached wings to the arms of Divinities, by means of bracelets: but, "Nunquam concessa moveri Camarina: "

* "Les alphabets modernes, rédnits à un petit nombre d'éléments vocaux par l'esprit d'analyse et d'abstraction, qui est le propre des sociétés avancées, ne peuvent pas plus appartenir à l' age primitif que le calcul infinitésimal." (Pau-rhier, "Sinico-Ægyptiaca," 1842, page 35.)

† The entire argument here turning upon a simple but great fact, the comparatively-recent invention of the true or purely Alphabetical system, I have condensed, into as succinct a form as possible, the substance of my inquiries in APPENDIX G.

until the introduction of the Demotic character, not earlier than s.e. 600, at

In the effort made, everywhere and at all times, hy infantine but intellectual man to record his history and to overcome space and time in the transmission of his thoughts, his apprenticed hand was at first restricted to the pictorial embodiment of ideas, however metaphysical. Pictures were therefore necessarily adopted to represent abstract, and essentially theological ideas ; but for the latter object, and in Egypt especially, they were made so distinct and so impossible in real life, as palpubly to designate their figurative character. The heads of birds, reptiles, and of beasts, were added to human bodies, and vice verse : and appropriate significant colors were used to paint them; each creature selected having an affinity, real, or supposed, in its nature, its name, (which sometimes was the onomatopee of its cry.) or other cause, to that particular attribute of Divinity, its pictorial embodiment or delineation was intended to portray. Thus, for example, the lecturer pointed out on his tableaux the God, Amon-Chnouphis, Amun-Kngph is represented on the monuments of a blue color, and with a ram's head on a human body. Blue is the colour of the celestial ether. The ram is remarkable for the strength and massive osteology of his forehead, and Egyptian philosophy placed the intellect in the frontal region. This combination was fitted to express the God AMUN-KNEPH: Amun signifying stability, truth, and intelligence, (whence our Amen), and Kneph, spirit; both together being the divine intelligent spirit. In like manner, divine watchfulness, vigilance, or guardianship, was typified by the head of a jackal on a human body, or the God Anuals. Jackals are notoriously the most restless and vigilant of Royptian animals; and in hieroglyphics are likewise symbolical of the word Priest: serving to emblematize his "gostchfulness over sacred things:" (CHAMPOLLION'S Dictionary, in loc.) A haut with a human head meant the Sour or disembodied spirit, and so on.

The first step in the deterioration of this system commenced when the piece of the animal which had been originally selected, in whole or in part, to symbolize a divine attribute, began to be regarded as ascred by the vulgar. The jeddal became an object of reverence, because his head was used to express pictorially the vigilance of Anubia. Motives of picty thus consenting the picture of the animal, hiring jackals were thenceforward preserved at public express in the temples, as holy emblems of that attribute of Delty which we term "drine variethelmess." This, at fart perhaps a vulger misconception disavowed by the Priests, was too profitable a source of advantage to the hiemerly not to be soon winded at, and in time completely acceded to. More smetuaries with larger enclosures were required, and better salaries for the jackal's keeps.

We thus arrived at that philosophical point of view, when we behold the antique Egyptian, in ages anterior to the pyramids, striving to express his

^{*} Unwilling to trust to my own definition of the development of writing among the ancient Egyptians, I solicited Mr. Blacm's critical opinion, and have the greatest satisfaction in referring to it under Appendix H, page 113, infra.

devout recognition of such an attribute as "divine seatch fulness" in his metaphysical conception of a Great First Cause, compelled by the absence from its non-invention) of any alphabet, to trace the allegorical picture of a jackst's head on a human body: and we have seen how an emblem so compounded ventually led to the worship of the litimis tackal.

There was no more of fetecchism, paganism or heathenism, in man's fart conception, or primitive deed, than when we onselves seried two works divine watchfulness' in alphadetdeal letters. Primeval man could not bely if He did his best to spiritualize in fart ideas were abstract, his conceptions lody, his intentions pure. The compulsory materialism of the means did not then decorate from the spirituality of the gambol, nor from the beauty of the metaphor. But it was impossible for the many to comprehend there as the contraction. Their true signification being restricted to the fees, they was soon forgotten in the sign; and secretotal faund found its temporal recreast too well promoted to divulge, to any but the instituted, who likewise paid heavily for the privilege, the true origin and real meaning of the union or a local's faced on a human body, in the pixelorial edge of the Gold Avenus.

Thence the transition to animal nummification was rapid and inevitable: for the time came when the sacred pet of the temple reached the term of its natural life; i.e., when the jackal died.

The Egyptians, who had been led long previously, by natural eauses, to embalm their dead seen as an act of piety, allegorized into the mythe of his re-uniting and embalming the scattered limbs of Onsus, reasoned by analogy, that it must be metriorious to munnify the carcase of the departed embalmed, and of Arsuns; and heneeforward all dead justical were collected, embalmed, and buried in appropriate catacomies, especially in those monus, or provinces, which, the Thebre and Vaporille, being under the immediate protection of the contraction of the resentative was reculiarly reverseded the emplex wherein his architecture

As it was with jackals, so in general terms the system gradually extended to other animals, birds, and reptiles; some being distilled or canonized for one reason, others for another; a few being reputed clean, while many, from motives not yet explained, were considered impure; until parts even of the vegetable creation entered into the category of things smentified and assumation. The contraction of the embanded speciment before him; which, in whole or part, comprised Dalls; and the contraction of the

Such was the primeval origin of Egyptian animal worship, the natural precursor of animal embalment, as deducible from the monuments and the confused narratives of classical writers:—institutions and theocratical practices which we find increasing in intensity as we come downwards in history.

The Priests alone derived profit from all these superstitions; and in their sordid love of gold they communicated the true meaning of the symbols only to the initiated in hierophantic mysteries—whence the perpetual distinction between the esoteric and exoteric doctrines of the Egyptian hierarchy. We must not judge, and the Lecture, of this primitive philosophy as it had been in ante-monumental ages, price to the invention of planetic signs, on the abject form its religious practice eventually assumed among the people, who were the dupes of the priesthood. The ancient Egyptian content was the religious fractional the properties of the major and Exodus vi. 3, show that the world had not been enlightened by any true views of religion prior to the days of Abraham; and we are speaking of times long anterior to that partiacely, when we discuss Exprision origins.

Mr. Oliddon again referred to his previous exposition of the lefty ideas contained in the "Book of the Bead," for promot hist the early erect of Egypt was far simpler and more exalted than that of later Plansonie, still more than that of Ptolemain and Roman days: and, after a shrife explanation of the origin of pictorial dirine Trinds, at the bead of which, in his tableaux of hisegylphical mythology, we were shown Ausons the Father, Macker Bary this interesting predection by reading a sublime definition of the God-Ear I this interesting predection by reading a sublime definition of the God-Ear that the state of the state of the state of the Society of the Society of the Society of the tion of the Folias. APPENDIX G.

I have hazarded the assertion, that the existence of a pure Alphabet; i.e. letters like our A. B. C. D. — can no longer be carried, by the archorologist familiar with hieroglyphical discoveries, with the results of continental criticism of aucient monuments and literature, and with Scriptural expess, back to the fifteenth century before the Christian era.

This is regarded by ma, not as a question of dogmatical opinion, but simply some of facet—a question in which the projetions of nations in farour of the antiquity of their own literature, or in behalf of that of other antions, while results of the contraction of all countries must be submitted to an inspartial criticism of the sources, the submitted to an inspartial criticism of the sources, the submitted to an inspartial criticism of the sources, the submitted so an inspartial criticism of the sources, the submitted is an inspartial criticism of the sources, the submitted is an inspartial criticism of the sources, the submitted is an inspartial criticism of the sources, the submitted is an inspartial criticism of the sources, the submitted is an inspartial criticism of the submitted in the submitted is an inspartial criticism of the submitted in the submitted is an inspartial criticism of the submitted in the submitted is a given author's writings down to our present day; and above all, it is an indirectivation have been preserved to as. The principle of criticism contends for, continual form have been preserved to as. The principle of criticism contends for continual forms of the submitted in the

Objections to my negative argument based upon individual preconceptions, the depart from the general tensor or print of the rules contained in the above works,

carry with them no weight in a purely scientific inquiry :- for an inquiry it is ; and with full consciousness of my own insufficiency to solve the problem proposed, the following brief definition is herein put forward merely as an inquiry. And the best evidence I can give of the very slight value I attach to personal opinion, whenever my humble convictions are proved to have been erroneous, is that I must commence this succinct tabulation of facts with a formal renunciation of the doctrines entertained by me, six years ago, when I published Chapter II., on the "Art of Writing:"—("Chapters on Early Egyptian History," 1843:—pages 11 to 18; and page 36.)*

I will not weary the reader's patience with excuses for former errors, which no great reading on his part of the works published up to 1842, on these bieroglyphical discoveries, will show to have been at that time, and in America, very natural and venial, inasmuch as Egyptological science has progressed, a little, in the last six years; but suhmit at once a few extracts from my portfolio, by anticipation of a future work, in which these facts will be re-considered and carefully elaborated. As I shall be scrupulously particular in references to authoritative sonrces, the

critical can, without difficulty, follow my steps on this road of inquiry.

Let me first posite the thesis in the language of PAUTHIER:—

"Many centuries clapsed from the day when man first appeared upon the globe which he inhabits, until that at which, united into society he discovered the means of giving a determinate form to his thoughts, until then fugitive, by causing them to pass into the domain of the material world. The first attempts that were made to establish a link of communication between the world of forms and that of ideas, must necessarily have participated in the imperfection of man's intelligence, which could not arrive at its complete development but through the progressive development of this grand instrument of civilization. It has been often said and repeated that language and writing were not buman productions, but divine revelations. If it has been intended to say, that the faculty which man possesses of expressing his thoughts by numerous articulations and subjected to varied laws, to communi-cate them by means of certain conventional signs, is a faculty which be holds from God, like his other faculties, the assertion was correct; but if, on the contrary, it was intended to say, that language and writing were directly revealed by God to man, essentially incapable of arriving himself at the creation, (for himself,) of any given language and of the conventional signs of communication, a grave error, according to us, has been fallen into; because, human languages, and the signs destined to represent them to the eye, are too imperfect, notwithstanding the efforts towards perfection that successive generations have brought to bear on them, to be the work of God." ("De l'Origine et de la Formation des differents Syfemes d'Ecritures Orientales et Occidentales"—Paris, 1848, pages 1 and 2 :—also fit the same erudite author's, "SINICO-ÆGYPTIACA: Essai sur l'Origine et la Formation

^{*} It is an odd coincidence that, at the moment when an amiable and erudite Reviewer • It is an odd coincidence that, at the moment when an antable and crutile Reviews Verk. 1854, of my little pumples, which since that day has passed through beeler editions, (E.400 copies having been sold by its successive proprieture,) the Authority of the Company of the

pages 1, 2.)*

It was owing to investigations consequent upon the study of these two works, in which my accomplished friend, M. PAUTRIER, has condensed into a few pages, which my accompusate irread, and Alphabets, &c., that are not to he found, if at all, in any two books written in our English tongue, that enabled me, in former lectures, to lay some general results upon the origin, order, and ages of writings before American audiences: (see reports in the Boston Ecening Transcript, 30th Nov., 1844; and Baltimore Sun, June —, 1845.) They are as follows:—

Ist Age.-The figured representation of objects and ideas; otherwise the pictorial age.

Of this age we possess nothing that can be safely referred to primeval antiquity. All harbarous nations, like the tribes of North America, still strive to

procedure their simple traditions by pictures.

To this age, with a probable infusion of the symbolical element, (although, as yet, whether of their lost languages, undeciphered writings, or chronology, it may yes, whether of their now suggasters, unacceptance with the products and so-called Hieroglophs of the ante-Columbian monuments of Mexico, Central America, and Peru. The vigrous researches of Mexico, Squira, Montroy, GALIATIN, &c., rendering imminent some most important discoveries, I advert to Transatlantic Antiquities merely to show that I am very far from disregarding the labors of my American colleagues, with the general results of which their kind liberality has made me acquainted.

On Hindostanic Antiquities-I allude to the Budhist and Brahmanical cavesvery little, chronologically speaking, seems to be known, and that little no longer, as was fashionable in the uncritical days of the learned hut credulous Sir W. JONES and his school, claims for them a remote antiquity, in the Egyptian sense of

. The opinion of Galileo, endorsed two centuries ago by one of the greatest hiblical

scholars the world has ever produced, is too authoritative to be withheld.

"Concludam verbis summi nostri seculi Mathematici, et novorum inventorum gloria "Gonciusam verois summi nostri securi Mattematici, et novorum inventorum giora clarissimi, magio GALLER, System. muud. in Collog, I, diei ad finem, "Super onnesi inventiones stupendas, qua ingeculi entinentia fuit is, cui venit in mentem excogitare, modum pentiissimas animi sul cogitationes alli cuiucuque communicandi, est songissimo loci et temporis intervalio distanti, colloquendi cum his qui verantur in Indais, cum his qui necdum nadi sunt, nec niti mille aat decles mille abhien annis nascuntur? R. the adjective. Without covering the page with citations let me refer to one of the most competent among recent explorers, PICKKRING; ("The Races of Man," &c. Philadelpha, 1848; page 283; and Chapter xxv.; Antiquities and introduced Animals and Plants of Hindostan.)

It being vain to look elsewhere on the earth's surface for vestiges of princeal comments, we turn to Egypt and to China, whose records will admit of our following their autochthonous annals, distinct as they are from each other geo-graphically and ethnologically, back to ages anterior to the thirtieth century ac. (See my Chromological Parallels between Egyptian and Chinese history, in the Boston

(See by U. Commodified a constant network and popular than the constant and popular to the constant and principle. In the countries the exclusively-pictorial age of writings attendates all monuments that the constant and principle. The constant and principle constant and principle and the countries the exclusively-pictorial age of writings attendates all monuments that the constant and principle. The constant and principle constant and the co authority is incontestable, supersedes any remarks of mine on the state of the Figurative, Symbolical, and syllabico-Phonetic system of the Egyptians at the very earliest epoch of their monumental history; together with the progressive development of the alphabetical principle as we descend from the tombs of the IIId and IVth Memphite dynasty, (say with BUNSEN B.C. 3,200.) down to the Persian conquest, (n. C. 525.) the age of quasi-alphabetical Demotic papyri. (Vide infra, APPENDIX H.)

The shove-named works of PAUTHIER, (and his admirable "Chine Ancienne, The shore-snaed works of PATHIES, (and his admirable "Canne Ancesses, days led solcuments (Shoist," Patrix, 1857), show that, at the opport of the In-feed of In-fe the wampum-belts of the present Indians.

The resemblances, few in reality, traceable between what of purely-figurative characters are still discernable in the earliest legends of China and Egypt, proceed neither from any known community of physiological origin of the denizens of the Nile and those of the Hoang-ho, nor from any possible intercourse between these radically-distinct nations at that primordial epoch, but simply from the rule, that "similar causes operating upon similar elements naturally produce the same effects:"—that is, in Egypt or in China, when man wished to write the Sun, he drew an orb, when the Mous, a crescent, and so on. The picture was necessarily the same in both countries.

IInd Age.—The altered and conventional representation of objects: otherwise the transition-period; when the pictorial signs pass into the symbolical, and thence gradually into the syllahico-phonetic.

To this age helong the ideographic writings of the Chinese secondary period, classed as follows ; (PAUTHIER, "Sin.-Ægyp.," page 24.)

1st .- HIGH ANTIQUITY; B.C. 2637 to 3369-according to the Chinese annalists, the KOU-WEN, or antique writing.

2nd .- MEDIUM ANTIQUITY; B.C. 820, -the TA-TCHOUAN, or altered image of objects. 3rd .- Low Antiquity; B.c. 227, -the SIAO-TCHOUAN, or image still more

altered of objects ; 4th .- Modern Times; B c. 200 to A.D. 1123, and still in use, -four kinds of current writing and typography.

The above are formed upon principles presenting some few analogies, hat in the main remarkable differences, when compared with the Egyptian phonetic system. (PAUTHIER, pages 98 to 110.)

Under the same age may be classed the Hieroglyphical and Hieratic system of of Egypt, the latter being a tachygraphy or short-hand of the former.

To the posterior terminus of this age in the order of development, if not perhaps strictly in that of time, may belong the three kinds of Cunciform inscriptions, Perstrictly in has of time, may helong the three kinds of Causelform inscriptions, Perseculian, Median, (oct olders, to far, han DARLER, Br. 2020, 30 of the more sanciest Naturalises). The contraction of the treatises of Londrick Relative that the contraction of the treatises of Londrick Relative the Causelford of the Causelford Relative that the Causelford Relative that the Causelford Relative the Causelford Relative the Causelford Relative that the Causelford Relative to restaure the slightest opinion; but refer to Huscas, ("O the Three kind of Perseptions Writings, &c." "Trans. R. Ir. Acade, 1847.) One point, however, as I declared to M. Borra at Paris, there years ago, when deading the vast confection exhausted by this interptiol forestatist at Khorsalad, seems worthy of conversion renumers by mis interpol. Orientains at Adorsanda, seems worthy of attention. It is that, were it not for the hieropylphical records of Egyptian dominion over Nikevest, Baber, Shimas, Namarias, &c. &c., by the Pharaobs of the available days, which establish the existence of the city Nikws in days contemporary with the 15th century a.c., it might possibly be found arduous to sustain a primeral analiquity for Nikeveh, still more for her arrow-decaded characters, beceath the scalpels of historical, exegetical and archeological criticism. Time will show; for it yet remains to be seen what infinence Pharaonic conquests exerted over the later civilization of Assyria. All hitherto developed has been summed

over the islar civilization of Assyria. All hillsterio developed has feen summed up with great perspectively and tegenome by linearch discoverer, LATARD: (Ninterch, "Allesti that we have hat very vegue data in this respect, it is exceedingly promise that that all writings began hy broing fegurative and galaxie before they became purely adjukation. Many alphabetes, such as the Seasor's spin-bale, the Edicial State of the Control of the Co

IIIrd Age...The purely-phonetic expression of the articulations of the human voice: otherwise the strictly Alphabetical age; to which belong all writings which represent no more than the vocal elements of human articulations, reduced to their simplest expression; i.e. A. B. C. D. &c.

To this belong the Enchariat, Demotic, or Epistolographic characters of Egypt; detached from occasional figurative and symbolical signs: to comprehend which the reader is referred to the works of Young, Champollion, particularly to DE SAULCY, LEPSIUS, &c. My library being in America, I am nuable now to quote passages from their works: hut it would appear that, during the 5th or 6th century B c., the purely-alphabetical system was incomplete, if so early, in the indigenous

writings of Egypt.

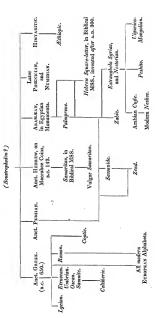

And here we are met by the earliest known Alphabet, parent of all Semitic Alpha-And here we're mee' by the earliest known Alphobet, parent of all Semile Alphaets, which are the propositions of all European its, its Perucustans. Whether exhibits the proposition of all European its, its Perucustans. Whether eithilities of the proposition of the Alphaet in the Company of the European in the Company of the Company in current in Egyptian hieroglyphics was fifteen; and we have the authority of ORIGEN and JEANME for an opinion current in their times, that the primitive letters of the Israelites, direct descendants of the Phanician alphabet, were hnt fifteen. I have collected abandant matter in favour of this hypothesis, but am not yet preprepared to advance it. I do not contest it. But, that the general reader may prepared to advance it. I do not contest it. But, that the general reader meshed the prohable order of the development of buman writings, at one view, I have aketched a Table, in which to the preceding definitions of PAUTHER, I have added a page attented and extended from CENSURIE, to whose profound work I begive to refer for all justificatory details. ("Scripture Linguage Phrancise Monumenta quotopto superman, Sec. Lippin, 1827, page 64.)

^{*} Just as the Cheroker-Cadmus, and half-caste Scotchman by the way, Sequoyan, or the Greybo-sage of African Liberia, from intercourse with Anglo-Saxons, conceived and invented their syllabic Alphabets .- (" Chapters," page 17.)

EARLIEST PHGINICIAN WRITINGS.

On the above Table a few observations must suffice for the present, beginning with the earliest Phonicisma writings. The remotences of the actionary of these is rather traditionary than monumental; inductively drawn through classical unducity (Hassoure IV, 57, 68; 1) Doosson III, 66; Plast VII., 56; Leoas III., 220-1; &c.); no isuserpisions in that character being catant other than ac. 394; (Gussavu, ubi supra, lib., 1 page 10; lib.; lib., No. viii., 6.) Yet, as its progenitor, the Phenician Alphabet, perhaps in a more archaic form than any now thought to the presence of the most of the control of t

—Corre, unnoticed by GERENUS, is a direct and post-Christian descendant of the nearly four letters of the Greef. Alphabet, with seven additional phonetic signs taken from the Demoté texts, to represent Oriental articular constraints, "Notablashman Copicol-actions," (Napster, page 18; Parmsr, "Yocabalashman Copicol-actions," Berlin, 1844, pages 19, Parmsr, "Yocabalashman Copicol-actions," (Napster), pages 18; Parmsr, "Yocabalashman Copicol-actions," Berlin, 1844, pages 19, Demos, "Egypt's Place", '2005 to 2919, 489 to 502 — Georgians, "A beckerbes are "Egypt's Place", '2005 to 2919, 489 to 502 — Georgians, "A beckerbes are in Langue et de la Littératured" Egypte, "1809; '&Co., &Co.)
Having no Konweldege of Minimizaties I am bere dependent on the obliging

Nor will I dwell on the possibility, knowing from his Egyptian mistakes how often the "Father of History" suffered himself to be imposed upon,

that the Pelasgian, or Phonico-Cadmean "letters inscribed upon Tripods." seen by Heropotus, (v., 58) in the Temple of Apollo, at Bootian Thebes, in the 5th century B.c., may have been of a far more modern period than the 16th century B.o.; -era ascribed to that Oriental immigration into Greece personified in the cognomen (KaDeM, Eastern,) of a mythological individual, who "sowed dragons' teeth," and "resped armed soldiers." Tradition, too falters in the ascription to Camus of twelve or sixteen alphabetical letters; to which an unknown PALAMEDES added four, and a later SIMONIDES four

more, to complete the twenty-four letters of the Greek alphabet.

Passing onwards to more solid ground, I learn, that the most ancient of primitive Grecian Inscriptions is the Sio.Ean in the British Museum. Of course, in Greek writings anterior and many posterior to the Christian era (Greek papyri, for instance,) the lines contain no divisions into words. A few of the best lapidary inscriptions of Greeks, Etruscans, Phonicians, &c. have their words separated by stops; on which conferre Gesenics, ("Pken. Mon.," page 56.—See Mr. A. C. Haunz' interesting popprie discovery, "Fragments of an Oration against Demosthenes," London, 1848:—and the exquisite fac-similes of the Codices lxx., Vaticanus, A.D. 400? and Alexan-

expanse: pine-finaled of the Concest 123, 1° of intensity, i.a., 360°, 1° and Alexander in the Concest 123, 1° of intensity, i.a., 360°, 1° and Alexander in the critical remains on biblical MSN, pages 270 G 275.—Di Ross, "Specimen Variarum Lectionum," če., Rome, 1762, pages 250, 629, 429. Cre., many of the Butt his Spécimen inscription, like most of the early Greek, many of the Concest 100 and 1 nques, '1845, Nos. va, xx., xxia, xxia, xxxia, xxxiva, xxxxix, xxii, xxii, xxiva, xxiv posed before Champollion's discoveries to have held the corpse of Alexander the Great,-known as that of Amyrtanus of the xxviiith dynasty; or, according to Dr. Hinges, of NcXTeNeV of the xxxth dynasty; date ranging between B.c. 357 @ 404.

An obscure passage in Festus enlarged upon Lanci, (" Paralipomeni vol. i., book 1,) says in this connection, "the Greeks called Taepocon that style of writing which descends from top to bottom;" obviously vertical writing, as in Chinese books and on Egyptian Obelisks, &c. Deeming this non-hellenic word to be of Oriental derivation, Laxer each Taccopon, drawing it from the Arabic WaKaF, "to stand wpright," cognate with a Rabbinical name for the solstices and equinoxes. This text proves again that extrical writing was not unknown to the Greeks. Early Arabian or Semitish nations, whose usages are generally the reverse of those current among Indo-germanic, or Jagethic families, designated the to-them strange writings of Greeks and Romans, by the terms MEFRA, reversed, or GONDOLITH, from the teft: and we find all perfectly-formed European inscriptions taking the latter, and all purely-Semitish the former direction. The old Hieratic (Huses, "Ages of purely-Semitish the former direction. The old *Hieratic* (Hiness, "Ages of the *Pappri*," in "Hieroglyphical Alphabet," 1847; page 34 et seq. :—and *Pappri* published by the British Museum, 1844 (2) 1844;) and the more recent Denotic writings of Egypt, whence analogy and history might lead us to infer that the Phonicians derived the first notions of their primitive alphabet,

proceed, like the latter's direct descendants, the Hebrew, Samaritan, &c., also from right to left.

It being legitimately inferible, then, that all boustrophedon inscriptions, in each country, belong to an age anterior to the permanent settlement of the dexter or sinister direction of such nation's writings, it becomes relevant to inquire into the direction of the writings of the Mosaic Tables of Stone.

Laxes, indeed, perplaced as all students must be with this enigran, renders the unparentated belower Text (i.e. divested of the Mascretic points which, not antiching the 6th century a.n., are of no authority) of Exodus xxxii, not antiching the 6th century a.n., are of no authority) of Exodus xxxii, doi: ...—'le Tavole crans sertific we due too procedument, if of past et al. it crans sertite:" ("Paralipoment," vol. i, page 80, 8cc.) In short, considering these Sinal Tables to have resembled in shape the Expripain Actes, they may have been written on one side alone, in a out of "evrical Ensuringships," (Acts vin. 22.) as well as with the Hierarie current in his day."

Now, inasmuch as we find the writings classed in the 2nd acro from Table, such as the hieroglyphies of Egry, which are anterior to, and possibly the parents of the carliest Phenoisian characters, inscribed from right to let or from left to right, horizontally or vertically, it will naturally follow, if this be the correct derivative order of alphabetical writings, that wherever we represent the class of a style is in use before the direction of the letters was permanently fixed in Phonicies, Arabia, Greece, or Etcuria. Such an indetermine system bears the impress of inserpetion; a and morks an age when the art of writing, in purely alphabetical letters, was still in its infancy. Hence Infer, that, in the olds to The century non-epoch of the oldest Greek in-literal culture and the control of the control of

Aguin, in all these ancient inscriptions, the number of letters varies from sixteen to twenty-two—averaging, however, eighteen or nineteen in the best Phomician and Greek inscriptions. Such, at least, is the result of my enumention of the letters contained in the alphabets of greatrus (*, 150, 1c) iv.: but see Dr. Rossi, "Speciment," note, pages 322 (6) 346). Pixra, ("Pixra, "C" Hist. — 1-c. O'ristad,—a-liphabet had but eighteen tetters: and we find that the early Greeks rarely used the 2004, 2011, and 2019 of the modern Hotever temperature of the state of t

^{*} If these Monie Tables antesiase the 7th century n.c. (of. Da Werra, Morra, Donas, or the "History of the History Monrady," London, 1847, page 329 to BORRAS, or the "History of the History Monrady, 1869, 18

people, adopt the unpronounceable ans or orans of Semitic nations; (Gassenies, page 67; 3) so that the Plinean and other traditions of pristine sixten or eighteen letters are confirmed by the oldest Greeian inscriptions. Their tenders, the printitive Ploneians, can hardly lave med more than flower or sixteen letters, as tradition also aserble to them; but there being be reserved. It is likewise maintained, by Oussex and Jenoux, that the old alphabet of the Hebrew's had but fifteen letters; and insamuch as the Hebrew characters are an affiliation of Ploneia's, the Ploneians could scarcely have possessed more. Now, the planeiar of the Egyptians, in their lawerglyphies, comprised but fifteen or sixteen syllabetic flowers and the proposed by the proposed by the processing the proposed by the pr

If, then, in the 7th century n.c.—period of the oldest purely-alphabetical documents extant—the art of writing in these channeters was so defective, so undetermined as frequently to proceed boustrapheloin, and the alphabetic themselves consideration on more than from fifteen to microen letters; if such, I repeat, was the condition of palsography in the second, consumerable, and upon Centration ers, on what grounds really instricted or monumental, and upon the purely-alphabetic system of writing be carried back to the tenth century, no. 4—still less to the frients? If

But it is imperative to deprecate two objections; one of the Indologists, and the other of the Hebraists.

The former may seen the primeral antiquity of the Drass-sain, "writing of the Gody," or Snearch, "the most perfect algolder of all the Arrivage of the Gody," or Snearch, "the most perfect algolder of all the stamp of a painful and slow investion, still hampened by the impact of figurative characters, it seems to have been formed by the highest philosophical and majorical intelligence that has yet appeared in the world "Parturas, "Synthese of Eccitures," &c., page 5853; with its derivatives, the Thibleton and Park ("models negrees 584 & 680.54).

the Thibetan and Pali-Cingalese, pages 584 @ 586.)

The two later having been invented long after the Christian era, the parental Sanserit alone calls for a few citations.

I dispute not that the "Sacred Books" of Hindostan may have been composed as far back as the fourteenth century, n.c., although unable to comprehend upon what soild ground this doctrine of Colesbooks's is based; be-

^{*} The preceding Table having indicated the consecutive and gradual development of the alphabetical principle through long cycles of time, from the ante-mountental period down to the 7th century x.c., it required no great length of interval between coldete known inscription of the 7th century x.c., and the first adoption by the Phenricuss of their principles and the contrary x.c., and the first adoption by the Phenricus of their principles and the result of the contrary x.c., and the first adoption to the contrary x.c., and the result of the x.c. and x.

cause, when I read Bussory, ""Introduction at "Histoire du Boudhlisses," and his "Commentaire sur le Voges,"—mo the Fere me to quote, nor the catalogue of the British Museum Lithnay; In o original Samerir MSS, were mentioned of any but a post-Christian antiquity. No will Orientalists, who have realized how thoroughly the instinctive habits of modern Astatic nations represent those of the ameien, deem that consummate skill in manufacture, "who there are the comments of the modern Astatic nations represent those of the ameien, deem that consummate skill in manufacture," anong crudite Pandits who so successfully duped Wuz-roan, at all of recent origin; " "sixt cut ent in principio," &c. 8

The very fact that the Kamerii is the "perfection of alphabets" implies, that it is the result of long nation enga, occupied by some minds, somewhere, in progressive stages towards perfection. And, while it not impossible that is perfect reliabation once is formation to intercourse with Greek intelligence, or to Himyar, through Abyssinian Zhidopio, it must be remembered that no Father is proposed to use for the Samerii alphabet : (Ct Watz, "Ancient Orthography of the Jews," &c.; London, 1840; yol. ii., pages 270, 480 & 400 ; Plate 4.)

When, therefore, the contenders for the ante-diluvian remoteness of the forty-ciphe lettered Sonzerit Alphabet can produce any stone, or other record older than the "column of Allahabad in honor of Teanama-Goura," Sondaracottus, Tootemporary with SELECUEN NEARON, D. 6. 213, 11 will be time enough for Hierologists, Shologists, Hellenists and Hebraists, to take into account the pseudo-antiquity of Sanzeris Alphabetical literature.

"Cadono le città, cadono i regni, E l'uom d'esser mortal par che si sdegui."

(Metastario's paraphrase of S. Sulpicius' letter to Cicero.-Epist. V. lib. 4.)

The Hebraist calls for infinitely higher respect; but there are well meaning persons who, disregarding the herculean labors of the Executions, and

* That the positionals of Histolatan through with varied populations, possessed great Empires and a high state of culture, in acga paralle with the earliest moniment of Egypt end China, upon whose dvilinations India coarried, and from development, no con, siri inspirita, will deep; but the hallocitations about early Brahamadal science in Astronomy, when their Zodisce are Greek, their Edispesses are greek, their Edispesses are greek, their Edispesses are greek, their Edispesses are greek, and the state of the short-deteriorable; in the state of the short-deteriorable; if a state on the short-deteriorable; if a state of the short-deteriorable; if a state on the short-deteriorable; if a state of the short-deteriorable; if a short-d

† Who may be a later TCHANDRA-GOUPTA,—"how are the mighty fallen!"—of the Rathore dynasty of Kanoudj: 6th to 7th century, a.d.! (Pauthier, note ubi supra; and Trans. Asiat. Soc. of Bengal, June, Nov. and Dec. 1835.)

wilfully ignorant of the first elements of biblical criticism, which are very accessible now-a-days, even in the English tongue, reason upon Hebrew literature as if King James Version really had been "printed (Job. xix., 23.) in a boot," and in the English vernacular, at Mount Siuai, some 3350 years are...*

No archeological discussion can be held with such until they have, at least, perused Noaros, ("Evidences of the Genuineness of the Gospels," Boston, 1844, vol. ii. Appendix on the Old Testament, Section iv.) But to the Hebrew scholar I propound the following interrogatorics:—

I.

What MSS. of the Hebrew Text, now extant, antedate the 11th century, Anno Domini?

II.

Is not each of these a copy of one or more lost MSS., which had all undergone *Masoretic* recensions? And is not each one of existing MSS, in a very corrupt state?

(Watrow, Prolegoment, 11, 58, 59; 5 to and 65.—KENTHOOT, 1st Dize, pages 254, 263; and Dizes, pages 55 on 66; "Mussel, "pages 225 0 50; "the Helbrew Bible was printed (an. 1447) Prom the latest and worst better than "below Bible was printed (an. 1447) Prom the latest and worst below below by the printed (an. 1447) Prom the latest and worst below below by the printed (and the printed Pattern Pranca, 1811, page 7; "Hornite latest of the specific corruptions of MSS, and of printed Pattern P. An age, moreover, that cannot be far different and the control of the centry and expected of the delete purely applications of the control of the centry and parents of the control of the carry fathers, Onusex and Jacons, to the effect that, "the Convenct Boors of the Hebrews were 22, according to the 22 letters of the Alphabet." It follows, then, that the Hebrew Alphabet must have attained to 22 letters, before the Canon of the Jews was closed."

Better scholars than the writer affects to be may, perhaps, be able to demonstrate the existence of purely-alphabetical writing at the unknown era of the universal flood.—G. R. G.

NOTE ON THE DEVELOPMENT OF THE SYSTEM OF WRITING HIEROGLYPHICS.

BY SAMUEL BIRCH, ESQ., OF THE BRITISH MUSEUM.

(Appendix 11. referred to ubi supra, page 97.)

BEFORE entering on this question, it is necessary to bear in mind the meaning of the following terms:-

- A .- Symbolics : Hieroglyphic symbols used to express ideas, and never pronounced or read except as the idea was.
- B .- Determinatives: Symbols, never pronounced at all, placed after groups of characters which were pronounced, and used to deter-mine or fix their meaning. They are the same as the Chinese keys, or radicals.
- C .- Phonetics: Symbols used to express sounds, and not ideas, forming groups which express the sounds or spoken words of the ideas intended to be conveyed.
- C."—Alphabetic: Expressing one articulation.
- D. —Syllabic : Expressing a syllable.

This last may be-

p.' -Limited : Employed to express one or few ideas. n."-Extended: Used extensively in the texts.

This legendary era fluctuates between Nehemiah, B.C. 420, as the highest point, and the book called Ecclerizatious, B.C. 232; (Hoav., "Introd. to the Crit. Study of the Holy Scriptures," 1888, vol. 1, pages 37 to 34; 11, page 384; b but it may possibly be brought down to the lowest data attributed to the LXX. persion, it may possibly be brought down to the rowest unto such possibly to the back to company and be able to be objected that several Psalms, the last chapter of Proverbs, and the Lamentations of Jeremiah, commence each verse with a letter of the alphabet, arranged in the latter's present order of 22, and ergo that the existence among the Israelites of 22 letters may be carried back as far as Solomon and David, 10th to 12th same sac: it might with equal critical fairness be argued, that this circumstance merely adds another to the many reasons, why these particular texts cannot have been written by the parties to whom Robbinical tradition ascribes them. (Cf., on each head, Dz Wertz, apad PARKE, vol. II.; and Dz Roser, "Specimen," pages 323, 333.)

- E.—Inherent: The character whose pronunciation exists in another, although not actually written.
- F.—Complement: The character written after a syllahic symbol to complete the syllahic; when omitted, it is inherent in the syllabic symbol.
- G.—Homophone: A symbol having similar sound to another, and used in other examples of the same word.
- I. Supposed antecedent primeval period of pure picture writing—no remains existing.

II. Archaic period, IV.-211. NYMATT. Pure hieroglophics, chlorated scalphured, especially in the details, "which as well carred. Linear hieroglophics, which depict the form by its outline only; used for ordinary purposes." At this stage there was no purely alphabetical system; but, on the contrary, the phoneties consisted of sixteen monosyllahles, commencing with the articulations $a, b, f, g, h, i, k, m, p, p, r \chi l, r, s, h, kh, h, n$. The process by which this had been deduced from pure picture writing appears to be this :—7.

Originally, the object was a symbolic, i.e., expressed its own direct meaning; thus, a sieve depicted was kut, "a sieve"; a mouth represented "a mouth," pronounced av; but the two written together depict the ideas mouth and sieve, or if pronounced, the sound RU-KHI, which expressed in the spoken language "to know," or inverted K'HI-RU, in the same primarilyspoken language "to," or "at." It is evident, that the misapprehension of meaning suggested the syllabic development, as a person reading off a purely symbolical system of picture writing would naturally present to the car combinations of monosyllables different from what was intended to be seen by the eye; and human intelligence could soon perceive the value of the application. At this age, the monosyllables, which end in vowels, generally have the vowel inherent (E), and not expressed as complement (B); which was added to recall to memory the syllable. Thus, the syllable RHI is formed by the sieve, in itself KHI; or by the sieve and two cross-bars, the syllable IU or U1 ; thus, R'H [I]-R'Hi [U]. At this period, the symbols were occasionally doubled, or even trebled, to express the value of unusual sounds, as KHI, KHA, KHAUA, for KHAU, "altar," showing that the language was in a state of formation or transition. At this age, the use of symbolics and determinatives prevailed, and all the great principles of the language were laid down.

[§] Hincks, "On the Powers of Eg. Alph.," 1847, conceives that there was a pure alphabet, and that the complements merely recall the name of the characters, as be for h, oee for c. This theory being founded on the interchange of homophones.

The interchange of homophones is rare. No hieratical writing known till the xi. dynasty: the first instances being on the coffin of the queen Menturer,* and the king Excessrer.†

III. Epoch of National Gruntness, xviii.-xiv., dynasty. IntroAction of a greater interchange of hosopolones (c). The Hieraits writing developed, exhibiting unequivocal traces of a pyllodic system, and employing a less extended number of deterministres (a), owing to its less pictorial character; better the children and the control of t

IV. Epoch of Decadence, xx.-xxvi. dynasty. Commencement of a revolution in the language, indicated by a muscle greater number of homoglonor; that is, the syllables which, up to that period, had been in general carefully distinguished, are promisecously interchanged; and many symbolical signs incorporated gradually into the system. This was perhaps consequent on the Egyptians being mblyclect to foreign influences, and thus become gasquainted with the more extended systems of the Assyrian Cuncitoms writines.

V. Egypt's Fall. Introduction of the Demotic or Enclorial. First spannes of party aphabetic and pilhels system of nore limited range to be perance of party aphabetic and pilhels system of nore limited range and the hieraric; containing all fewer determinatives, and representing the then spoken language. It is an outgrowth of the hieraric being retained as late as Tasass. The demotic, late under the Roman Empire, superseded cattrictly the hieraric, and was ultimately listed extinguished by the Optic. It was an attempt to assimilate the Egyptian system of writing to the Alphabetic Phemician.

EXCURSUS

ON THE ORIGIN OF SOME OF THE

BERBER TRIBES OF NUBIA AND LIBYA.

TWITH the former number of the Journal terminated the series of "Lectures on Egyptian Archeology," which we announced to our readers in November last. We feel quite sure that all will admit that they have far more than realized the promises we then made in regard to them. Mr. GLIDDON has taken up the subject with so much enthusiasm that his notes and elucidations have very much exceeded, both in quantity and interest, the series of reports which forms the groundwork of the papers. The method of treatment is by no means calculated to do anything like justice to the writer, but it was unavoidable, under the circumstances, and it has at least the advantage of throwing a great amount of matter into a very limited space. These Lectures, in their present form, have been received with such favor by those best able to appreciate them, and their interest and value are so obvious, that it would be quite superfluous in us to say anything further in their praise. We shall therefore only observe, that to the general reader they give a better idea of ancient Egypt than could be obtained by the perusal of many treatises of far greater pretensions; that to those commencing the study of Egyptian Archeology, they will be found invaluable as a guide and book of reference; while to the most accomplished Egyptologist they introduce some new facts, and place many old ones in a very novel and important point of view. On the present occasion, we lay before our readers a dissertation of another kind, suggested by an argument glanced at in a former page, and which at our request Mr. GLIDDON has developed into a distinct paper. It forms an appropriate sequel to the Lectures. This will terminate Mr. GLIDDON's labors for the Journal, for some time to come. He is now preparing for a new series of Lectures to be delivered in America. They will commence about Autumn next, and will comprise, in addition to the latest hieroglyphical discoveries. an account of Assyrian and Persian Antiquities, embracing all the Cunciform subjects of Persepolitan, Ninevite, and Babylonish Sculptures, as far as they are as yet understood.]-L. BURKE, Editor of the Ethnological Journal.

The name Beanes, conjectured ("Ethnological Journal," No. VIII.; note, page 343; t) be ecogate with the Hautilot-Shemitish words, PaEREB-BAR, the Western-Son, or Son of the West, has suggested some inquiries; in attempting to develop which I have become more than ever convinced of the importance of Arabia, as the most copious of Somitic languages, in elicatidating many geosphician amost of Northera Africa preserved to us in Egyptian likewglyphics, and in Herew records. Without Interber preface, but the substitute of the Arabia Shemiting Shemiting

The works of Ino Armosaves, Caswarran an Manson, D'Hammor, Ghaman en Hames, and of my respected friends, M. D'Avenza and Mr. W. B. Hossess, wherein may be found extracts from Amb historians, Et-Massock En Kaldedon, Exérices, &c., &c., will satisfy the inquirer, that there is searcely any new etymology, within the verge of possibility, which may not be attributed to a word that, in amens of tribes (often physiologically discounting the control of the co

Berber, sometimes pronounced Brøb, has been traced to the Arabic BeR, sorth, doubtled as if it were written BeR-BeR, "term-term, to imply an autochthonous origin; or to BAR-BeR, son of earth. One need not pause on BeRégord, Anabic dearet:—BeRBeR, to nourserie:—BaRBARA, a bustion the Chaldee BARA, or the Arabic BARRA, outside, without: nor on the Coptle BERBER, Ast; which is as reasonable and gratitious as if we were to derive Berber from the Turklab "Bermbérn," together, "assieme, ensemble!"

Pencouve' etymology is BARB, terra-gentis, while to the Amb chronicles-Ber is the descendant of Maxing, neplew of Canana, grandson of Han 2" or clae "Ber, son of Maxing, neplew of Canana, parent of Bermains" ("Qy, "her Ambie Barrainee, forcignen, "omittide-barbanian")?"—or according to other traditions, "Ber, son of Kis, neplew of Allian, one of the absplaced Kings who field into Africa" supposed to be confirmed by the well-known, and probably appelaryhala, Greek inscription left us by Pacorons, "which is a said to have been found in Promision characters as Cardange: "We are said to have been found in Promision characters as Cardange: "We are They are said to have been introduced into Barbary by Afrika, whom my bearend friend M. Fansons, veru moretive considers, like Debre Nivacie, Donal-

^{•• &}quot;De bello Yandelico", ilb. H. cap. 20. St. A courstus is allend in regard to his inscription. The most critical proof in favor of its substanticity is given by MCMS, ("Plaedine," note, page 81) who contends that the phrase ατο προσωντο, from befree the face, is not Greetan, but a translation from a true Phoneisian or Helsrew tilson, as in the Greek version of Old and New Testaments: (quoted slot with insiliar remarks by Hintoras, "Celide Druids", 1827. Appendix, page 182. For all classical quotations on the identities between liebrew, Canamithib, not Punic, Veral classical quotations on the identities between liebrew, Canamithib, not Punic, Testantice at Methericines Sprache and Sathfu," Leighe, 1815 r page 8, 56.—and 1819. "Scriptorer Linguagese Phoneicies monuments," Lipsies, 1837, page 12, 63, 54; and 61, £ 53.

Karniya, Lokwan, Dhou-Enish, &c., &c., a personification of Bacehus: *o on which bereafter. The Berbers, or "chi per loro," say their prognitions were Amelekites, and also Sabasans, even drawing state for pedigrees from the Tolant monarches of Himyar. If so, their language ought to partake of Cashite Himitists; and it is perhaps a mere coincidence that in the disable of Zhafit "mbbrs" means son; the root I fancy to be perceptible in B-EREB-Bar.

While the greater number of Arab historians derive the Libyan Berberfrom the Asiatic Continent, it must be admitted that Eas Knarnooox contests their descent from Abraham, Goliath, Amelek, Afrikis, Himyan, &c., &c.; without adducing, however, any positive proof to the contrary : (cf. Senuz's translation, Jour. Anda., 1928; pages, 1386; 1389.)

The derivation furnished by Andaras, that "Bar, son of Lakis Gallan, King of Egypt," to whom the poole naswered, "Bar Bar," i.e., "Bar lives in the desent,"—and that of "Afrikin, son of Kis, son of Safi, of the Himyartie nee," who said to bis followers, "Be Breistenn," "your country is very barren "-oe," "your country is a land of wheat "-("U Harassaro," Biblioth, offent, "page 18-6),—more correctly perhaps, "the link is sour own land." —these derivations the philotoger dismisses with a smile. The Habew word was a strength of the convent of the body language not the law, in the Link a strength of the Manner schedule the by language not the law, in the Link a strength of the st

The appellatives flaqsfapen, barbari, (said to be applied in the form Fernera, or Warawas, by Hilmodos, to esteasts,) barbarians, or in its pristine Greek sense more strictly perhaps strangers, were bestowed on the Libyan Berbers in very ancient times; (see Appendix 3); and they are recognizable, B and V being always interchangeable, in the Fernes, or Verviese of Roman geography; but whether the barbarous habits of the monadic tribes gave birth to the proper name Berber, or vice-versa, is what I do not pretent to define. Ensursate terms Barbary the 'institute of the Berbers,' and it would not be incorrect to transcribe it as Berberia, in lieu of Barbaria.

Without speculating whether the Berbers of Barbary and those of Nubia be or be not affiliated nations, I proceed to examine the antiquity of each.

^{**} Recharches aur les Inocriptions Himpariques !"—(Gorr. Aniat., No. II., Paris., 1845; p. 6.3.) This reference, topether with that profonod Orientalist via discoveries and researches into the California of Miritalist discoveries and researches into the California of Miritalist and Zhaffit; the Incentes country of S. Arabia, ("Octor. Asiat.", Doc. 1838; 1. 1839. Neither an I yet repeated to accept the antiquity chinarie by Meastra, 1939. The California of the Arabica of Miritalist and California of Miritalist and Cali

The modern Nubians ostentationally boost that they are Betherin in the singular, and Bertherin in the plant. To them Berther in a term of honor. Berther is still the capital of Upper Nubia; and hierologists are aware that conquered Nubian families, whose ammic in orthographed BRBB in the legends of Houns, Sermes Messerstin, Rasses-Mai-Auson, read by Rossianis Ballog and by me simply Barobera, are extant as for back as the middle of the xviith dym., say the sixteenth century n.c.; (cf. Bisca, "Gallery of this anne, whose lincomments are exactly similar to the Nubians of the present day, occupied the same localities above Egypt, some 3,500 years ago.

In seulptures of the same age we find a Nuiban divinity, called in the hieraphite is RAD, (Renstans, MAR, vol. III., part 1, pages 260, 972, 992; part II., page 28, &c.; and it is known that the word NcB,* gold, is the root of Nuble, from that region's proximity to the auriferous provinees of the Upper Nile, Fanziblu, &c.; (seem prote in Mouros, "Crania Ægyptienes," 1044a-jee, which 4,000 years ago attracted the artidity, and the Nigritian expeditions of Planaclos of the still and succeeding dynastice, as in an in Still of Modemmed Alig—ide Russroons, "Reisen in Europa, Asien und Afrién," Suttgart, 1841-5.) But this name Ne II is likewise that of another Nublan deity, still more mysterious, Nosh, Nubl., Nuble, (Scalt i Num?); whose phonetic designation sometimes presents us with the same notical doubled, as Acurson. May there not be a similar duplication of the name of the God BARO in that of the Nublan people, the Baro-Baro, no Herbers?

It is periaps a mere accidental coincidence, that the Baro, "a very large viven," and the Birbir, a tributary of the Godjeb, together with the "country of Berri," Barry, Bêr, should still be appellatives in the Berber regions of the Upper Nile: (Bars, "Nile and its Tributaries;" Jour, R. Gog, Soc., 1847, "tol. visi, pages 41, 47, 69, &c.—lann, "Origin of the Gallas," 1848; page 6.) The same root is perceptible in the River Astaboras, Asta-BAROy I Now this idea to Mr. W. D. Nasn.

^{• —} C. R. Evenya's re-siling of Ga-UB, Nubla, instead of our ministelligible Chab. In Eachlel xxx, i, if Expt. Sci.00, iii. 1 page 6, 3 and other very ingenious philological connexions of the helicained name Canopus J. Alach-8-Noru, "the land of Geld"—in LANC ("Fattre & M. PERSE," 1817, pages 119, 133, 139, 150, 151). Mr. Shi.arr suggests in preference, kah-n-A'nan, "City of (the God) Chaosunia," or Knouphia.

Turning our attention to Barbary, we find it maintained by an excellent authority, (Gasano an Hauson, "Fspeculis goographico estatistico dell' Impero di Manecco," Genova, 1834, pages 251, 286, &c...) that the Amaripska, descendants of the Marige, Marist, the most ancient inhabitants of the Chair from the Nike to the Atlantic, never heard the name of Berler, by our author considering an atopium of the adjective barbarous, Barbari, previously to the year a.s. 694; when the Spanish Jews, fleeing into Africa, styled meth of their co-religionists as land been periodacy testablished there, those whom European writers had called. "the Philistines of Barbary," by the deprecisacy Clivitia, or Munin historian user the two del Berler, show the second century after the Hedjin .—that the Grecks and Romans, "non si as troppo peralet," and afterwards the Ambs, gave to these Amazings the name of barbary or barbarisas, whence Berleri became their foreign appellative. The Moore call them BRABER, or Berler.

They are undoubtedly the Mac'we of Herodotans (fib. IV, 101), traceable in the Mariei, Maice, Macou, Macii, and other Roman corruptions of the indigenous name Amazip, Insarie, &c.: (CASTRULOSS, "Recherches sur les Berderes Athantiques;" Milan, 1982; pages 80; et sop. : also D'ATRAZO's article on Berders in the "Encyclopádie Nouvelle," vol. I., sub voce, B and M being interchangeable ktess; its just possible that we might read Barksrize, Barksride, Baursi, instead of Marmarrice, Marmarride, and Mauri, in Libyan geography? Barxouxt; ("Ounches," Memères de la Société Ethaologique; Paris, 1841; Tom. I., part I., pages 180 @ 140; and 1845, Tom. II., part II., pages 180 @ 141; and 1845, Tom. II., part II., pages 180 @ 111; and 1845, Tom. III. pages 180 @ 111; and Instituted the consunguisity of the unfortunate inhabitants of the Canary lakes with the Berkers of Libya; and if they could reach the Islands of the Athantic, the same people may have occupied others in the Mediterranean, particularly Malia.

This is somewhat confirmed by Acts xxvia, q, 3: where 8R. Pauc calls the inhaltants of Melletin 'hadraians' '[Pelletivit']'); a term scarcely in keeping with their humane reception of shipwarecked voragers. Nor is mention made of any interpreter, which is quite in accordance with what is known of the close relationship between Hebrew, Cananatitish, Punic, and probably Berber dialects: (but compare 1 Corin, ix., 11; and consult Nerwars, ''On the Structure of the Berber Language,'' apad Parunano, ''Researches into the Physical History of Manking', ''Ou, ''Appsoin's 2000.

Having usynelf spoken Maltene before I could converse in English, I can attest that the present inhabitants of Malta use a mongel hanguage so full of Mighrashe Arabie, that a Maltene and a Barbaresque can perfectly understand each other. They both represent physically and linguistically the relies of an earlier people, who seem to have been in part a Bether affiliation with a Plaunician superposition: (Lindustant, "Cours d'Histoire Ancienne," 1858, pages 290-1.)

While better classical scholars than I pretend to be must decide whether, in ancient Greek and Roman writers, the words βapβapos, or barbari, by us rendered as the adjective and noun barbarian, may not sometimes mean literally the proper name of the nation Berbere (F), she historiographer of these Moghida tribes, himself a Berber, Esse Kranzonov, (3rd Book, on the "Kaball el Berber,") says of their speech, so "Wa loghalednum sine el-wrusars el-auranarra,"—and their tongue is of the foreign (i.e., not Arabie, and therefore borbarous 1) gibberish." The whole passage runs—"Their tongue is a species of borbarous lagron in which several dialects are distinguished it is it is hangonge which gave rise to their name: "—(Seruzz, translation of "History of the Berbern"—Journal Asistingue, 1832, Tom., ii, page 118).

In this connection how many epithets, applied by strangers to foreign nations, and by the former perpetuated as if they were really indigenous nomenelatures of the latter, are either unknown to, or when known, disavowed by the natives themselves! Frank, Arabice Frangee, Hindostanice Ferinjee, if a title of honor in Gallie tradition, is now applied by the Muslims to all Europeans, English or Russians, as a term of contempt; although in the time of Francis I. it was simply the Osmanlee for a Frenchman. It is from the all-grasping acquisitiveness of the Apares that we derive our adjective "avaricious," although in their language the name signified noble: but the most curious of these phenomena is perhaps met with in the word Schlave. Of yore, individuals of the vast panslavic migration, which, anciently as at the present hour, (DE Baotonne, "Filiation des Peuples," vol. I., page 349, &c.) unable to force a passage westwards through the Teutonic barrier, was compelled by the "vis a tergo" of still figreer marauders to form a geographical semi-circle to the East of German races, captured and sold in Roman slavebazaars were called by their proper name Sclavi, Sclavonians, which in their own tongue meant glory, illustrious, heroic, according to Balbi,-(" Atlas, Discours Préliminaire," 1826, pages 33, 34;) and PRICHARD, (" Researches," 1841; vol. III., pages 404.) We inherit its misapplication in our word slave. And to carry out in this example the strange vicissitudes that words have undergone, accidentally or through design, in the process of translation from one tongue to another at different ages, by reference to CAHEN, (" La Bible, traduction nouvelle, avec l'Hébreu en régard," Paris, 1834-47 : -the best, if by no means a faultless translation of the Old Testament.) and to SHARPE, ("The New Testament translated from Griesbach's Text," London, 1844,) the intelligent reader can easily verify how, in almost all those instances where our vulgar English version has the word "servant," the original Hebrew has ABcD, slave, and the original Greek couloc, slave: a fact hitherto too much disregarded by ethnographers. (See Postscriptum.)

So it is with the Arabic appellatives \$\frac{ddjom}{ddjom}\$ and rotains above quoted. The former, in ante-Mohammedan periods when the chief commercial relations of the Bédawec tribes of Yemen, Omàn, Hadramaut, Nejd, Irik, &c., were limited to the Persians, was applied by the Arabs to the inhabitants of Irân,

^{*} The reverse seems to be called for in Haston's "Memnon,—king of the Rhibopines" which, instead of being translated as a geographical name, and in consequence sending the student on a fruitless hunt after this fabalous or mythical personage among the Negress of Africa, if rendered "king of the sum-home-d-peca," becomes a generic term, the ethnographical description of any sworthy Asiatic people, who may have accompanied their chief to the fabile slegs of Translation.

in its sense of foreign, as the strangers "par excellence;" yet in the colloquial Davig of Cairo, by the designation digience, or Muss'ree digense, the Egyptian nows-drays means a Tenian to the exclusion of any other people. Is it not possible that the misuse of the term digien, understood as a Persian when it literally means a foreigner, may have given brith to the legand that Persians settled in Barbary! (See D'Averac, "Bulletin de la Soc. Géog.," 1480: Tom. xiv. useg 227.)

The tradition that Persions immigrated into Barbary rests, I believe, on the authority of Saxturn, ("Mugutha," § 18;) and is supposed to receive confirmation from the name of the Libyan tribe Plearmeines, Plearmes, Sc. (PLINY, V., 8; and Branas, v.ii., 9; 7; note in French edition, vol. V., page 460;) in which the word Plearmee, Persian, is perhaps discernable. Unable comprehend how Persians could have reached Barbary willout leaving on the rottle some trace of their posseps, I accept this merely as another or the persians of the production of the persians of the production of the persians of the pe

With respect to the latter, the dialect current among the Amazingha of Ghadhanis is called "ertana" by Basas, on the authority of Lrons, who says it is thus terned by the natives. Now, in Ambie, rad ann means a jargon, and ration a mixed tangue. It is a depreciatory designation applied by crotic Ambot to disons whose articulations are in sound uncount to their auricular nerves, and cannot therefore be the indigenous name given to their own speech by native occuration of Ohadhanis or of any other review.

The same principles will doubtless account for some missipretensions current in relation to the word Berler; but with respect to its antiquity in Africa, whether it be a name indigenous to the Amazirghs or not, the otherwise ingenious objections of Gaasano an Hasseo fall to the ground the moment we prove, from the monuments of Egypt, (tobi supra,) that a similar people, equally "geniers subfusica coloris," existed in Nutsia and Austral Libya, 3,600 years ago, as their descendants do unto this day, registered in interphyphics as the BBRB, Bornell to convert hand this is one of a native property of the BBRB, Bornell to convert hand this is one of an and Austral changes and the supragraphy, that to leave aside the discoveries of the Chantoflimitis in these questions, is "to act the play of Hamlet, the propositionists in these questions, is "to act the play of Hamlet, the passion of Hamlet being left out by particular desire 2" (Chapters, pages 39, 31 :—see also on Berbers, pages 42 and 47 —and for the most prefer thyrescentists).

of Nubian, Bisharree, and Ababde families at this day, consult the beautiful Plates of Prissr, "Oriental Album," 1846-8.)

A fortunate accident placed my own investigations on a different track. Mr. R. K. HAIGHT of New York, to whose beneficent co-operation I am proud to acknowledge myself debtor for the transatlantic and Parisian facilities of study I have enjoyed since 1842, in the course of augmenting his ohoice archeological library, purchased at Paris, in 1843, a very curious French Manuscript, by an anonymous but most proficient Orientalist, apparently compiled in the reign of Louis XVI.; that is, prior to Napoleon's Expedition to the Levant of 1798. It is an Essay, in answer to the inquiry-" Quelle a été, pendant les trois premiers siècles de l'Hégire, l'influence du Mahometisme sur l'esprit, les mœnrs, et le gouvernement des peuples ehez lesquels- il s'est établi?" There are some marginal notes, by another hand, attributed to Silv. DE Saev. which enhance its value; but, written by whomsoever it may have been, this Manuscript was penned by a first-rate Arabic and Turkish scholar; because the technical expressions, "tournures de phrases," he adopts at every page, are such as no European, who had not resided for a long time in the East, and held direct intercourse with Arabs and Turks in their own tongues, could have perceived; while few could have literally jammed so much information into the same narrow space. One example of this nieety of appreciation will suffice for the Orientalist.*

The Arabian Muslimèen, in devout resignation to the volition of Omnipotence, incessantly utter the sentences "In-shia' Albh," if God wills, "Mashia' Albh," what God wills, reverently and in humble doubt as to the result that Providence may accord to their prayer.

Very different is the cnunciation of these pious ejaculations in the mouth of the imperious Turk; how still encamped and the sakes of ence-populous Empires his blood-recking sabre has rendered desolate—a hated foreigner in all realms that still writhe beneath his agentizing grasp—while he usurped the dominion and much of the language, took naught of piety from the Amb but his "odium theologicum."

To understand how, where, and when this scourge of humanity arose, and the fearful part the Turkish race has played in history, (of which it seems to be the tiger-element, logether with the philosophical argument exhibiting the immense action of the Gunhaltee as a stimulus to European eivilization, compressed by the Turkish barrier into a limited area of development, be reader must constit Chinese annals, beautifully unfolded by Janoor ("Retotutions day Europea de Taksia Movemen," Paris, 1839.) I question not the

In adverting to that critical discrimination which between the though Orientiatis "majer (mi)." I deriver real satisfaction, onlier relevaning insames as it so ravely falls in my way, in recognizing among the grand merits of Mr. Lavanse and Arabian peculiarities. Wherever a Turk discourse, the altestees of his expressions are rendered into figure that the manner of the properties of the

political utility of this circumscribing force; although since the time of the Empress Carmanns it has ceased to operate. There was a Sect in early Christianity that worshipped the memory of Judas Issariot, on the plea that, if he had not betrayed the Saviour, the world could not have been saved. (Ct. Srauzs, "Life of Jesus," in loco.)

The Mongol-Tartas, *parent of the present releved Byanatium, had pastured his horses on the remote banks of the Bi, for unumuhered ages hefore, when the Has-Y two, his predatory propensities attracted Chinese attention about the twelfth century, han. There accompanying his anagoniary rise to power and dire career of spoil and foncy through Central Asis;—as the Hoscos-nonger, ac 200; Trouc-ray, whence Tart, han. 582; merging through the photocompaning Housean and Haxas into the conquering Searons, about a.m. 1000;—mote behold the Grovans; much altered physiologically owing to annalgement with the hapless females of Greece, Circassia, and Georgia, if but little in morel characteristics; a harbaria on the outskirt of civilizations he can never accept; tolerated by political sufference and the international jealousies of European power; whose remonstess tyramay is home with cursus load and deep by all populations under his role, amid the still-echoing shrieks of staugheter Okerstorians.

"O nation inhuman, rapacious, and ville!
At once the reproach and the scorn of the Nile;
As he reddens ashamed of the slien Race,
And his tido curls in anger at Ecry*r* disgrace!
What avail thy rich harvests, thy deep-bedded giebes,
Thy thrice-yielding crops, or thy wool-growing meads,
O, Land of the Pharanobs! The soms of thy soil
For the Stranger must till, for the Stranger must till."†

* RABID RID-DERN, vilis of Giazan Karan, compiled a history of the Mongoly contensibly from their our traditions, which must have compiled many apocharyhad account; juasamuch as adjabatic artilog, derived by them from contact with account; juasamuch as adjabatic artilog, derived by them from contact with KRAI, a.D. 1101 (CATTRIER, "De P. D'riginet et du la Formation des differents Systèmes of Ecritor Orienteles et Occidentales", "Paris, 1838, page 387-8). Iff more here to the contract of the property of the Deep and Catter Interfaces, 1898, page 387-8. If the property of the Catter of the Catte

All this is falsalous in itself, besides being controlleted by Chiner annals; a (Zantov, vol. in., page 5.) These unbistorical origines of nations are now adverted to, as a periade to the discussion of the xith chapter of Genetis, (see "Ethnol. Journal," No. V. (vol. on, page 254.) whereby it will be demonstrated that, most operated by the control of the control of the part o

† Posthumous poems by the late JOHN GLINDON, U.S. Consul for Egypt; Cairo, 1842. They embody the feelings with which the Egyptian Arah regards the present as well as any future Osmanlee dynasty.

Accustomed to crush opposition with his into topoot (Turkice, mace.) and defying all obstacles but a bayonet's point, the Amb phrases "In-shâ Allâh," and "Mà-shâ Allâh," in the mouth of a real Turk no longer signify "if God wills," and "shac God wills," but are uttered with the tone and air of certainty; as much as to say "I will lit."

To bring the case home by a parallel illustration. Our English word "guess," current in England in its Johnsonian sames of "to conjecture—to judge without certain principles of judgment," when transferred to the United State bears, in common parlance, the signification of "certainly, without doubt, to be sure." And as familiar example of how proper masse become changed by transportation to different countries, let us instance the story of Jones Fauer, an Englain emigrant, who, settling in Pennsylvania, found his protocymic translated by the Germans into Paraners." Unancessful in browning the state of the protocymic translated by the Germans into Paraners." Chancecesful in colonials amond him Pierre Mylail', and in later days be departed this life in New England as the lamented Paran Guy 1; "

This sample of the Oriental discrimination of the unknown author, to bring which within the comprehension of the English reader has led me into some prolit digressions, is one of many that display the Eastern knowledge of the writer of Mr. Hassur's manuscript. He gives, moreover, appropriate extracts from the best Anb authors, among them ZBa Khalejon, English and the Allejong, Hollye Khalefon, E. Britesse, El Matricas, El Masooke, Dischaledion, &c. &c.; and it was their perusual that suggested many new ideas to me, leading innensibly into various fields of research; through which during a summer's recess from lectureship in 1844, I stambled upon what I

Perhaps the reader doubt? Let me continue him by "unuspay inse nisertime, wild." During the terrille plague of 1835, the provinces of the Theshid were remnant or the Manoore dilatory in the transmission of the taxes to the Treasury Coice. Monaxene Axt promulgate a Ermina, which, while it threatened the extreme of Egyptian harbarities to all parties in case of further delay, contained the following Arabaric sentence: "fell it explose for-sin-fall side not for-life, fairing permission of God, because God has nobling whatoever to do with it." A copy is on lie among my paper.

[†] Excellent remarks on the changes that have taken place in national tongues, together with the rules to be followed in discriminating between the physiological race of a given people, and the hanguage spoken by such people, may be consulted to the property of the prope

believe to be the key to the xth chapter of Genesis. A fragment of these results may not be unwelcome to the reader.

Two families of man, contumbering at this day in Marocchine territories alone three millions of population; one splty described as the French and the other the Belgiens of Africa, (Grassmon se Hauso), very distinct in habits and appearance, and comparatively unmixed with each other, dwell along the Northern face of the African continent from the Onais of Ammon to the Admicis, under the generic name of Amazino, Maripal; (sometimes with the Hamitie feminine article T prefixed or suffixed, as T-amazingh, or Amazigh-IT.) They are reputed to have imbided little like blood from contact with Phositico-Carthaghian, Greek, Roman, Vandal, Anth, Jevish, or Nigrid-Roman and the Marian Contact of the Contact of the

The Stillouis, whose occupation of Barbary is sufficiently ancient to be too in the high of time, would seem to be autochnose. The Stillouis themselves any they are Aberigines of the Mégheb-el-sians: also that their ancestors, besides using the Barbar cidious, wrote and appoke in "Qelaim Abooneases," and the second of the second second

^{*} D'Avezac, "Esquisse générale de l'Afrique," 1837, pages 45 to 47.—Ibid, "Bulletin, Soc. Geog.," Tom. 14, 1840, pages 227, 228.

[†] Here I would observe, that the vocabularies! I have seen, sceept the concise but very scurrule ones of Mr. Honoson, such for instance at Statuzzi's of Berber tongues, are full of Arable; e-specially in all works implying evidication. More tongues, are full of Arable; e-specially in all works implying evidication. More tongues, are full in remarkable in Buropean accounts to other Africas Insaggares. "Their common ensemy is the Arable," observes one of the most qualified of Africas explorers, Bernansono, ("Tavestein in the Great Desert of Sohars," 1846, so for the Arable, and the Socialized Languages, the form of the *First three Chapters of Genesis* and the Socialized Languages, the form of the Arable form of Genesis* and the Socialized Languages, the form of the American Oriental Society," No. III. Boston, 1847, pages 28 to 274, 1 and of the American Oriental Society, "No. IIII. Boston, 1847, pages 28 to 274, 1 and of the American Oriental Society," No. III. Boston, 1847, pages 28 to 274, 1 and of the American Oriental Society, "No. IIII. Boston, 1847, pages 28 to 274, 1 and of the Arable form of the American Oriental Society," No. IIII. Boston, 1847, pages 28 to 274, 1 and of the Arable form of the Arable and the Arable form of the Arable f

but "sun-barned-force,") their language partaking of both. These Ammonians are the ANAIMs, of Gen x, 13; { there I differ entirely from Lixon-warr, p. 245; Casarx, and the genenitity of commentators 3 and owing the influence of Egyptian blood, were probably failer mee than the Asa Ammones of Herodous, the Nakan-danosinas, Negro-Ammonians, of Man Binett: ("On the Hiemitical Canon of Turin," Note, page 6.) Castrolaens affirms, that of the names Moree-damontis, or Moor damit (danatie-homonians) the Greeks made Measumoso, and thence Neasumoson. The orbit of Munu was not confined to this Ousis, but extended over Libys: ("Berbers," page 61).

On turning however to biblical commentators, to seek for the geographical habitat of the Casludian, KSLHim, Gen. x., 14, (the sentence is wrongly punctuated in our version,) the reader is made to travel from the Eastern provinces of Lower Egypt, as far as Cholcis on the Euxine in the hopeless chase. By restoring the Hebrew letters of that verse to their primitive MS. state, "uno ac perpetuo ductu," rejecting the modern Masoretic points as not invented till the sixth century A.n., and disengaging the plural IM. we may read Kah-Shi-LuH-im: the counterpart of what a hierogrammatist would have written Shilloun-kah, "Land of the Shillouns," or ShiLHa; whereby this name takes its natural place in the Oases, and indicates one of the most ancient and widely-spread families of Barbary. Their cognomen is easily identified in the designations Zilia, Zilia, Zilia, Zilca, Salinsi, Zilzacta, Massuli, Xilohes, MassarkiButc, or Amazia-Libyans, and Massæsyli, or Amazig-Shillouhs, of the kingdom of Fez, &c. in ancient classical geography, and modern maps. EBN KHALEDOON expressly declares. that the Berbers " descend from Kesloudjim, son of Mizraim, son of Ham :" (Schulz's transl., pages 140-1.)

I dwell not on the generic name of all Barbary in Gen. x., 6, Phut (who, be it observed, has no children, alias colonies,) PhoUT, Forr, (softened into Fas. Fez. in Morocco.) the ancient Futeva. Phouti. &c. of the Maps: still preserved among the more distant Foolahs of Africa, in Foota-Jallon, Foota-Toro, Fouta-Bondou, Foota, &c. : (see the very erudite inquiries of my excellent friend, D'Eighthal, "Histoire et Origine des Foulahs"-Soc. Ethnologique, Paris, 1843; vol. II., pages 7 @ 9, 140 @ 146.) This name is common enough in hieroglyphics as PhnT-kah, the "bow-country;" the generic name of Libya, as in Nahum III., 9. It is here adverted to, to distinguish it from the specific name of tribes more contiguous to Egypt, with which it has been confounded by HENGSTENBERG, and by many besides LE-NORMANT (pages 235 and 245). I allude to the Naphtuhim, Gen. x., 13: NPTH im. It is ludicrous to read what the old commentators make of them ! By re-dividing the word into NiPhaiaTuH-im, we obtain the Coptic transcription of the Egyptian name for nomad tribes of the Western skirts of Lower Egypt, NIPHAIAT-now driven far into the desert, from the oncepopulous vicinities of Lake Marcotis; since the introduction of the Mediterranean waters by our army, at the siege of Alexandria, between March and Sept. 1801, converted that far-famed wine-growing province into a salt marsh. And we talk self-complacently of French devastations! Niphaiat is the plural of PheT, or PhuT, signifying in hieroglyphics a bow, as well as the phonetic sign for the letter Pn; which, coupled with the segment of a circle Tn; followed by nise units, and the sign halo, country, (Oappters, p. 4.1) yields us in the plural form NLP-HALAT-KAH—the Phointst-dond, or "country of the nine bows; "which is faithfully landed to us in the Helven map as Niphotonotains: families of NaPun, Libys; Mojarebe-de-dond of the Arabos: Niphotonotains: families of NaPun, Libys; Mojarebe-de-dond of the Arabos: Regrate, prenounded in Gen. xq. 13.1; which the lamed Hencets has above to be the TO-McTeRI, "the land of the tree Nigopts" of the monuments: "(Hieroglyphia of Ancient Egyptian Alphabet," before quoted, 1847;

page 28, Pl. I., fig. 78.)

Irreducible as these names have hitherto been by the learned in Rabbinical literature, all the descendants of the mythical Ham, KHeMe, are perfectly explainable, now-a-days, by the hierologist familiar with Egyptian discoveries; although this is not the place to continue the parentbetical exposition. I stop therefore with the Pathrusim, PTRSim, Gen. x., 14. If known to classical geographers in the forms Pathros, Pethouris, and by biblical commentators erroneously restricted to the Thebaid, even were it so in modern and ignorant Coptic times, (PEYRON, " Papyr. Gree." Pars II. page 57.) these branches of the Hamitic family are the Phi-Tho-ReeS-im, literally the world-south : that is, Austral-Libvans, the people lying to the south of Amonians, Shillouhs, Phaiats, &c., of Barbary; into the composition of whose name the Egyptian word REES, south, (Champollion, "Dictionnaire," pages 212, 218, 403 :- Isio, "Grammaire," pages 267, 278, 297, 396, 496,) entered, when the original map of Genesis was constructed. in the same manner as it did in later Coptic times, when Egypt south of the Delta bore the designation of MA-REES, the southern place; whence, at this day in the winter months blows the meREESee, as the Fellahs of the Nile still denominate the south wind.

I pass on to the second division of the Amazinghs, viz.; the Berbers of Libva.

Such traditions as they possess point distinctly to a Cananalish derivation, to which triel language also bears an infiniter relationship; i CASTICLEGATE, pages 98, 94, 98, 128, 127; —NEWENS, spud PERGENS, IV., 867,

"Trans, Philol. Sco.," vol. L., page 144.) They are called the Philiteire
of Barbary, and in xist Gen. 14; are distinctly averred to have issued
as the Petilshim, (hieroglyphic), Pousorso; Canar, "Gram," page 180;
—perhaps the unaccountable helpheder Philitist of Herodotus, who pastured his flocks around the Pyramics in the Western Desert) signifying,
the Chillibard of Barbary as down thown, to them still cograte nations.
But the bistory of Philistia," in Palestine, is very obscure; (see on the
Philitistia—Monor, "Mémoires une Perhapical"—Acad. R. des Inser,
et B. Lettres, 1770, vol. xxxivth, page 148, et seq.) and there must ever
the tune certainty whether the tenditions of these African Berber, like

[•] I have read the "notices" by QUATREMERS of MOVERS' "Philister," although they are not now before me. The original, I grieve to add, is beyond my reach.

those of the Mongols, were not written for them, "apies coup;" and whether these Phillistines of Libra are physically of the same stock as the Phillistines of Canana. As yet ethnological science bus not decided if the Berbers of Nubla he affiliated more than in nonlinal similarity with their namesakes of Barbary: nor again, in the affirmative case, can we readily comprehend how we should find the BelßReß already domicitled in Nubls, long prior to the expulsion of the Cananaites by Jossux. The subject is hedged in with dilemmas: and in consequence, having on discoyor my own to propose, I offer the following coincidences, "sub judice," as crude clements of a discussion in which, if fond there is "much virtue in fy".) We Berbers of Libra be deemed of Cananaitish descent, the points I now inquire into will additionally corroborate meth byvotelesis.

Under the Chapter on Berlers, in a cutions description of the domains already subjugated by the swood of Islain, given by a sage to the Caliph Ohan, Mr. Haton's Manuscript treats on the provinces of Barbary, with certacts from Ex-Massoners and from Ex-Kauskoos, himself a Berber and the historiographer of his nation: (2nd book—"\$\tilde{\chi}\$ alkhhir of Berber shows the Berber's) of the camals of the Berber's.) Only the Berber's of the company of the Berber's of the company of the company of the Berber's of the company of the Caliph Wellers I; who, to give these restless warriors better occupation than revolts, despatched by of the third of the Berber's of the Caliph Wellers I; who, to give these restless warriors better occupation than revolts, despatched by the chiral of the company of the Caliph Wellers I; who, to give these restless warriors better occupation than revolts, despatched by chiral of the company of the Caliph Wellers I; who, to give these restless warriors better occupation than revolts, despatched in Sancacion chiral of the company of the Caliph Wellers I; who to contain the company of the Caliph Wellers I; who to company of the company of the Caliph Wellers I; who to company of the Caliph Wellers I; when the company of the Caliph Wellers I; who the company of the Caliph Wellers I; which we can be company of the Caliph Wellers II; when the company of the Caliph Wellers II; when the company of the Caliph Wellers II; when the company of the company of the Caliph Wellers II; when the company of the Caliph Wellers II; when the company of the Caliph Wellers II; when the company of the company of the Caliph Wellers II; when the company of the Caliph Wellers II; when the company of the Caliph Wellers II; when the company of th

Among these Ambie passages I was greatly struck with a list of trenty-live Tribes, into which the Berlers were subdivided four centuries ago; whom tradition, at least, respected by their national chronicles, (no mean authority—see Seasowsis* "Matonist", 1941, vol. I, page 13s, et seq.,) derives from Canana, where Gielostaish, Golinth, was their king; and who in very ancient times settled in the Möglerbe, at Belounge and Makingha. Gialout is considered to be a generic tile of royalty, like Pharaoh, PhRA, the king; CPI Harantor, page 364.

I instituted in 1844 some comparisons between these cognomins of the "ukabif el-Berder", and other suthorties, the substance of which is submitted at foot; but it is essential to premise, that it is difficult to present their transcription in English orthography: at the same time that probabilities militate against the assumption of some of them, as they are given in Mr. Hanorir's MR., because many variants occur in the different copies of Eas Krassboos. (Cf. the critical observations of Torners, "Narratio de Expeditionibles Prancours," (1992a, 1840.)

The general principles of my remarks will not be materially affected by

^{*} These Western Arabs are termed Moghstrat; and as another proof of the preticula knowledge of the anonymous sutter of this Manuscript, he says, that, among the Arabs, the name of "Moghsteke (literally a "man of the Ghish", or West Bazhary, it is synonymous with Mogician". I noticed be some fact in European, and particularly of English travellers; ("Appeal to the Antiquarios," 1941, page 1965.

these variations, and the original MS, not being now before me, some oversights may be mine. Our anonymous author seems to make use of a Turkink translation of Eas Kauarsoos,—by Perriadel Mohammed, under Ahmed IIIrd.;—comparing it with Masonors, kilind chapter. I have no means of clocking these names but through their transcription in the works so often: cited; pericleusly in Security translation of the "History of the Berkey" by Eas Kauarsooc; (Journal Asintipus, 1802; Tom. in, pages 117 @ 1421). Hanarry MS. The Orientalist need not be reminded that they are prosent to us in the Anable planel from: just like many of the peopraphical personilitations in the Helsew Texts of Gen. x., opecially in excess 13 and 14.

1.—ZENATE—Beyond the fact that families with this patronymic still inhabit Barbary Jave little to office. The Zentes are one of five grand partitions of the Berbers, said to have been originally Sabenass of Ambiguing and Masson, "trad. Perroy, 1067, Ton. 1., page 683; the Masson, "trad. Perroy, 1067, Ton. 1., page 683; the Masson, "trad. Perroy, 1067, Ton. 1., page 680; the Masson, "trad. Perroy, 1067, Ton. 1., page 680; the Masson, "trad. Perroy, 1067, Ton. 1., page 680; the Masson, 1067, page 100-1). Los A PERSEAUS adds "unblusic oloris sunt;" ("African Description," 1056, p. 6.) which was and is still the color of the Cashie Ambians, the true ZETHIOPES, or "uno-Invaried faces," of Hebrew geography and of Homerica ages. The Zentesk [Hoozotos, p. 35.) may be of the Amelekit mee; but based upon the analogies submitted in the sequel, which throw various "finities of the KaNANI" into Barbary, after they were "presed abroad," (circ. x., 18.—incorpolyphick RANAN, x), I would have the throw various "finities of the Salva Masson, of Gen. x., 17? They are the Sintes, Sintities, of Calsand prography.

2.-HOWARA :- one of the same five branches of Berbers : and without question the Hörites, HOR-im, (Gen. xxxvi., 20, 22; Deut. ii., 12, 22;) Troplodytes, primitive inhabitants of the Seir Mountains, now called El-Shèrah. D'Avezac (" Esquisse," page 80,) also connects them with the "divine Aurites," now represented by the Berbers of Aouryah: identified by Bertholet, ("Guanches," i. 68,) with the Haourythes of the Canary Isles, and descended from the Aurighah-tribe of Atlantic Berbers. They gave their name to Abaris, and to the province Abaritana. These nomads still visit the confines of Egypt. The Pyramid of Howara in the Favoom is named after them, even if of erst it was the tomb of TaU-MERE, ("Ethnol. Jour.," No. VII., page 308;) and to this day, from their skill in equitation, breakersin of horses are at Cairo called Howara. During Mohammen-Ali's campaigns in Syria, large bodies of Barbaresque Howara served as irregulars; as I have had other occasions to remark. [See one of my many letters, dated "Alexandria, (read Cairo,) 26th March, 1841; and, in that day, considered by H.M. Ambassador at Constantinople to proceed, although my name be suppressed, "from a person extremely well acquainted with what is passing in the country;" no less than worthy of insertion in a dispatch from Lord Ponsonay to Viscount Palmerston, "Therapin, April 7, 1841." It is printed. with numerous typographical sphalmata, in the "Parliamentary Papers;" Session, 19th August to 7th October, 1841; vol. viii., page 393. Among

other blunders of the printer, in lieu of "Sakal hales," (repeated in page 394,) which is nonscuse, read Sukkat hales; by which every Felhih understands what in English may be paraphrased, "an invalided veteran, thoroughly saed up."]

3.—LIVATHE, or Leavara—possibly the plural form of Leavar. Lakewated but at I cannot clearly distinguish its analogies from those of the following No. 11 (Leavate, I) I class it provisionally under that head. Orientalists are however aware, but the Arabic letter song, U, O, O, W, V, Frequently becomes dialectically F, or PH, P, B, &c. Ex. gr. Hinas-ABIF, (I Kinga vii., 14] and 2 Chron. ii., 13,) so eciberated in Masonic Head and Chron. ii., 13, or eciberated in Masonic head the least distributed of the same is pronounced by an Arch ABOP, or Alborithm of the same control of the same in the same letters, ABIF, the last distributed of the same is pronounced by an Arch ABOP, or Alborithm of the same letters, and the same

If it be allowable, then, to read the Arabie word LeBarka, and instead of the first word to substitute a soft Lea at this name occurs is none MSS, LiBarka; on detaching the Arabian plural we should have the exact counterpart of LiBbia, Lebarka, of Care, x, 13; whence the Aribya, Libbaya of the Grecius, and the r-LiBia of Coptic MSS; (Chaur, *Bg. rous ler Plant, 1814, in loco). The LiBbia, Lebarka by commentation supposed to be LiBria, in loco). The LiBria, Lebarka by commentations supposed to be X, 1814, in loco). The LiBria, Lebarka by commentation supposed to be X, xin, 8, may be thus identified with the Louastha or Beni-Lewa of the Arabs, the Arracefax, Arghavia of Placoretra, and the Langmanton of Courvest.

4.—KOTAME, _ _ _ ? They are the Ketâmah in Senuz; one of the main tribes of Berbers, and like the Sinhadgians reputed to have immigrated from Yemen.

5.—NESZE —Are not these the NAHSI, Nahasu, of the bicroglyphies? Nigritian Berbers? They must have been considerably darker in complexion

Although not "one of the free and accepted." I have strained that wheth is accommodated and the strained post domentaries that acrebined post unity or a. travergenesive in-quiry, through the supera say, by the aid of them selmens, into the opinious current at Abassania, Formation, and the layer, back to the intrin century before our eraofficers to Mr. Jonn H. Sutravano, of P. H. P. and K. T., (author of "Addressthe Grand Lodge and Chapter of Missim: Buston, 1844; pages 47, 90, 22) and to Mr. TROMA FRITE, K.G., L.O., 28, ("On the Study of Massonia Antiquities," Col. R.O., of the American LOO, Er.

—G.R.G., of the American LOO, Er., Masson, Masson, 1847, pages 20–11, and 18, 18).

than others of their mee to entitle them to this distinguishing appellative telepasses on the mouments the Nadams are desicially Negroes. See their portniss in the tomb of Surnos-Mengaldat I, (Rossillan, Pl. Mar. 100; Text.), Monti, Story, vol. iii., part 2, pages 100, 174, 447; and in that of Rassa-Maiaura, (Jino, Pl. Mar. 137; M.S. vol. iv., page 249; with other examples and remarks in Pl. Mar. 109; 198, No. iv., page 239; and vol. iii., part 2, page 106. Compare also Gravronion, "Letters of Egypte," 1830, page 249; —Jacossavar, "Historic Ancience," page 310 @ 234; —according to the more exitinal observations of Buen, "Gallery of Antiquities," part 2, page 95.

```
6.—ZERNOUDJOUME, __ _ ? Werfadjoume?

11.—LAGUTE. Mentioned above, in No. 3. These are certainly the Lond, LUDns, closts use of the Mitrosia, the two Musers, Egypt, in Gen. p., 13. On maps of Barbary, this name constandly meets the eye; and in history we encounter the Louf in the varied Grams of Lod, Oldsi, Autoloif, Euleti, Tolori, Autoloif, &c. There are still Otati or Olori among the Amazingh families. All admit the national prefix Aris, "some of;" like Ma, Fitz, O', Ap, among ouncelves. In the Periplus of the Carthaghina Asson, they gipture and the Aris doe, some of Lud ; Anthiele Beal-Louid; Ludouja, Loi, Lydda, Disopolis, in Ambie Louid, was a town cast of Jaffis; (1 Chron. viii., 12, &c.) Arain a Cananzibia findity is perceptible.

12.—NUKOUSHE. We need not hesitate in recognizing here the word KUUSH, with the Copies or Hamile pland IN before it; by which Crassroussos transcribes the pland form of KwSH, the generie name for Nobian, Migritian, and Austro-Libyan nations in the hieroglyphies; the KHOOSH, Nobosoh of Copiel literature: (** Eg. 2000 les Phanonos; **—or ** Dictionanire; pages 408, 409; ** "Grammaine," page 108, 400; J. It has been already maintained, that three distinct divisions of mankind, Cross, KwSH, and Chau, are often confounded in ancient geography; (**Edmo.l.) curr, **No. VI., nexfe, page 204, The Hebrew Cuus, generically the Cushites of Southern Arabia, and Akir Cassassias family, in no part of the text crosses the Red Sea and Keinessias family, in no part of the text crosses the Red Sea Anisa And Africa, on the Ishlums of Suce, viz., **the Torrent of Cush.** Other.

wise the "streamlet of Mitzraim;" the "torrens Ægypti," Besor, Corys, 'Wadee el-Arish;" the winter brook, or Seyl, which divides Syria from Egypt at Rhinocorura : (cf. Rosellini, "Monti Civili," vol. ii., pages 394 @ 403; on Isaiah xviii., 1, 2.) Our vulgar version, in this as in hundreds of similar instances, follows the LXX.; substituting Ethiopia,* whence part of the geographical confusion of ideas; for this term was not, in Ptolemaic times, exclusively and specifically applied to countries or nations south of Egypt; but was current in its generic sense of "sun-burned-faces;" (ubi supra.) After the Christian era, ETHAUSH is its homonyme in Coptic MSS.; apparently limited by Coptic ignorance to the Nubias; with which regions the anterior Cush of the Hebrews has not the slightest relation. Le-NORMANT (page 232,) is probably right in denving that the Greeks derived their Action from the later Coptic ETHOSH; the reverse being more natural, especially as in both the Semitic root ETH, fire, is traceable: although my friend Prof. Lanct suggested to me, 1846, that Ethaush is compounded of of two Arabian radicals, HEET, form, and ABES, to be black, swarthy, &c.

Be that as it may, WILKINSON (" Topog, of Thebes," page 487-Gerf Hosseyn, Tutzis, ---) treats of Thaush as the Coptic name of a town in Nubia. now called KiSH by the natives; and philologers know that nothing can be more vague than vowels in Semitic tongues, and how easily S is transmuted into SII: Ex. gr. Shibboleth, Sibboleth, Judges xii., 6. Even in hieroglyphies KuSH is spelled in different ways; KeSH, KASH, KeSHI, (HINCKS, "Hieroglyphical Alphabet," page 16; Pl. i., figs. 23, 26, 27;) and besides undergoing all kinds of vocal metamorphoses in the mouths of different tribes, at different epochas, this name has doubtlessly been translated in divers modes by foreigners, some referring it to Nubia, others to Lihva; some to Arabia, and others even to Hindostan, where Brahmanical geographers have two "lands of Cush,"-" Cusha-dwipa within," Eastern, and Asiatic; " Cushadwipa without," S. Western, or African : (Faber, "Origin of Pagan Idolatry," vol., II., page 487;) but, lest these coincidences should be derived through some Wilford, I never allude to Hindoo subjects save in fear and tremhling. What can be more indeterminate than the geographical application of the names Indian, or Scythian, except Æthiopian?

While claiming, therefore, that the Egyptian scribes by their hieroglyphical and Illamlic designation Kous, referred exclusively to African access and that the Hobew writers, by their Semitic name Coul, referred exclusively to Arisities 1 Ib yoo means doubt that the Arabian Cushites crossed the Red Sen into Abysshinan provinces in very remote times; where many of their descendants, in numberless mulatto grades, dwell to this day. On the contrary, this immigration is an essential element in bistory; for details of

^{*}Among the Rabbi we encounter the same confusion of ideas between the Andreas and Affente Richigate. They Annanezer thicks that what the Speke Hinterior anys of Boses may be trave, via, thus believe his educative at Milania being the second of the Speke Hinterior and Speke his educative at Milania being the second of the Speke Hinterior and Speke Hinterior and Confusion at the Horsew tradition statisty, it is plain that Southern Arabia, and an Arabia at the Horsew tradition statisty, it is plain that Southern Arabia, and an Arabia at the Horsew tradition and the Horsew tradition and

which the reader is referred to Forster ("Hist. Geog. of Arabia;") no less than to the excellent researches of Jomano, Frener, and other distinguished Arabian incuires of this century.

Reports of my oral lectures (Philadelphia Ledger, 16th, 23rd Jan., and 6th Feb.: Baltimore Sun, 11th March, 1845: "Southern Literary Messenger," Richmond Va., July, 1845, pages 8, 9:) have placed on record that it is with me no new opinion, whilst striving to discriminate between these heretofore conflicting data, that the xxvth Manethonian Dynasty, of three so-called "Ethiopian kings," SHABAK, SHABATOK, and TAHARAKA, of the sculptures, in whom no Nigritian lineaments are perceptible, (Roselling, "Iconografia," M. R. Pl. xii., Fig. 47, 48; xiii. 49:-Morron, "Crania Ægyptiaca," Pl. xiv., Fig. 16, 17, 18 .- Text, pages 47 @ 49;) are perhaps the descendants of an earlier Asiatic-Cushite immigration into Meroe, via Abyssinia, whence they descended the river to the conquest of Egypt. Their portraits prove that they were not, nor are they ever called, the KuSH, Nigritians: neither do they express the true Pharaonic cast of feature. Dr. Monron terms them Austro-Egyptians; and it is to be remarked, that we have no monumental evidence that their dominion was irksome to the denizens of Egypt, otherwise so revolutionary under a foreign voke: which I opine to proceed from their being of the cognate Hamitic family of nations. (Gen. x., 6,) whom I conjecture, "suh judice," to be painted red on the monuments: (see Hoskins' colored plates of the Tomb at Thebes, age THOTMES III.; or WILKINSON, "Man. and Cust.," vol. I., pl. iv., page 364, et seq.)-a color, of which I have seen no negative proof that the Egyptians ever gave to populations who were not connected with themselves, in blood or through traditional origin. I speak of populations, the "profanum vulgus," advisedly; because all "de facto" rulers of Egypt, Persian? Greek, and Roman sovereigns are colored red out of compliment, like the autocthonous Pharaohs: which is another proof that the color on monuments had no relation to that of Egyptian skins: inasmuch as the Grecian Philadelphus, and the Roman Augustus are equally painted crimson like their Pharaonic predecessors; from the same mythological reason that A-DaM is literally "thered-man ;" red being, with all primitive nations, the honorable color " par excellence." (Cf. PORTAL, "Couleurs Symboliques;" and LANCI, "Paralipomeni," vol. II., on Aleph-tau, &c.)

That a foreign dynasty has ruled Egypt, in ages anterior to any Greek authorities, is rendered more than probable by Mr. Binen's researches upon the Bishastite Dynasty; ("Observations on two Egyptica Cartouches, &c., Gund at Nimorqui,"—Trans. R. Soc. Lit. 1848, Vol. III., part, 1, pages 165 @ 170: and Lavano, "Avinered and its Remains," 1849, vol. II., pages 203 @ 215.)

In a letter to Dr. Moorros, ("Fhile, Is Sept., 1844; Proceed. Acad. Nat. Sciences, Philadelphia, Jan. 1844;) and still more in extense in another of the same date to our lamented friend, the Hon. Jones Prexision of Boston, Prof. Lessues announced several important philological dissoveries of fine own in Nubian ethnography; from which, in part, I drew some of the foregoing conclusions. He found three distinct languages in those vicinities of

- 1st.—The Nubicol, or Nouba, "strangely called Berber," spoken in three dialects along the Nile, from Aswan to Southern Dongola; and likewise in parts of Kordifal, as the natives pronounce Kordofan.
- 2nd.—The Kengara, language of Dàr-foor, a Negro tongue, very widely spread, although its name was previously unknown.
- 3rd.—The Brazaura, Bépáneo, idiom of the Bishárriba, [the Béjas, Bejas, Béyarura of the Arumite interription the nuclean Biemper of the Romans; Bala-Mosis of Copit MSS. (Chamouzos), and the Bal-en-6, or Iri-n-4, of the hieroglyphise in the Nubin conquests of Surinos I., [Binen j] who occupy the wilderness from Lat. 23° to 15°, and in genests force the fertile district of Taken.

This last, by far the most important of Nubian tongues, is grammatically Genesian. Dr. Larsius undertakes to prove that the ancestor of the Bishiriths built the Temples and Pyramids of Merce; none of which attectate the second century ace, and descend to the third century after our ern. They instituted Egyptian style, coloring, hieroglyphics, and art, in their scored, historical, and sepulchaml monutents; but they wrote also in a species of Ethiopian demotric: (see my communication to the R. Soc. of Lit; London 52 June, 1846; Forcect, vol. 1, No. 16.) In fart that the tongues of which my valued friend, the Abyssinian explore, Dr. Berz, lass given vocabularies, belong to still more austral regions of the Upper Nile; nor do I omit New-Max's carvest, that the Bardlera of Nubia are a distinct people from the Berlers of Libys, "—a point that philology alone can never settle; fee these gentlemen's respective papers in Trans. Philological Soc.; vol. I. and II., 1843-5.)

This digression will convince the reader of the innumerable questions suggested by, and the solution whereof is dependent on, the results of pending inquiries into Berber Originas.

Now, do all these Caucasian and Nigritian races come under the generic term KvSH, on the monuments? I entertain the contrary opinion; because wherever the KvSH are portrayed they are not painted red, but in shades ranging from light brown to the deepest black, exactly as the varied Barüberafamilies who concreate in Cairo are seen at the present hour.

The NcKorsne or Nikossh, then, of East Knakkoross may be, for aught we can yet assert, either descendants of the biblical or Arabian Cushins transported into Africa; or che Austro-Libyans, ahorigines of Africa, whom the Egyptians stigmatized 3,500 years ago by the phrase, KuSHI-ni-kah shafte rises hoon, "the percene race of the barbarian lands of KuSHI."

A glance at a map of Barbary will point out a multitude of names in which one of the above two designations is apparent—KIS, KESH, Cus, Cusa, Susa, Cus-i, Couchi, Cossii, Succosii, &c. &c. Are they the ZUZ im? (Gen. xiv., 5.)

Some of the facts brought forward under this head may interest the ethnographer. Alas! I fear that, so far as the existence of the name Nukouska among the Atlantie Berbers be concerned, they rest upon a sandy foundation; because in other MSS. the name reads Nefousch or Nefousch's (Scinuz, page 302; and Castinitons, page 104; the Nefous, Assuri of Contrum,) The whole question turns upon the most insignificant triviality—a mere dat? If there he two dats over the Arabic letter, it is a coph, N, and NuKouske is correct; if but one, then we have a fe, F, and the name reads Nefouske.

13.—MEZANE _ _ ?

14.—ENINE.— _ ? As a bare conjecture, and through the license of the anagram adopted by Fourtras, if an M be substituted for N, we might have here the Anamiss, ANMss, Anominus of the Oases? (Gen. x. 13.) Or, inasmuch as we have found the Horites, and other Camannistis finities in Bartary, these may be their associates the Enists, i.e., formidable? falsely rendered "giants" in some versions. (Gen. xiv., 5: Deut. iii. 11.)

The latter have been confounded with the ANKim, vulgarly supposed to ginsts? If the text of Scripture shows that these "daildren of shack" were scattered all over Palestine. If to the word ANKi the reader will prefix the Phonician masculine article Pa, she, he will preceive it to be quite natural, that Catza should find the Ph-ANKim, Phensicians in Phonician in those day; whose civilization and skill in the act of war should render them formidable caemies to the invading nomada of Ismel. In Numbers iii, 22, and other places, the unpunctuated text has LLDH HANKi readered the "children of Anak," but the prefix H, or demonstrative particle, is suspected by Cantex to precede a proper amore; CNOst to Numbers

These acquained with the endless polemical disputations about a masseries point will not doubt the uncertainty with a term in linguise upon an Arabic magas. Nor is it in Arabic literature about the two encounter such dilemans. "But because the control of the property of the state of the property of the

xiii., 22, in "La Bible, traduction nouvelle.") The Hebrews called Ha-ANaKIM the same Phonician people who termed themselves Pu-ANaKIM: in either case the Anaks.

15.—WARIKA. Aurijohak? The Amazirghs make use of the determinative articles d, dh in the masculine, and t, dh, in the feminine gender: (Honosox, page 20.) With the article prefixed we read D-WARIKA, Turricks, a widely disseminated Berler nation in Africa. Mr. Binen conjectures that these might be the Waruki, (2) in the list of African captives on the "Pedetal of Status of Africansoph III."

16.-KAILE - - ? in Scautz, Kailan?

17.—OMARE, Aimane. These are the AMORI, Amorite, (Gen. x., 16.) so famous in Hebrew annals: and the AMORI, EMORIT, of the hieroglyphics among Aristic captives of the Phamola, (Buen, "Gallery," page 86, &c.): likewise the Emori of Hissen; "Alphabert," page 13; Pl. 1, fg. 17), found as early as the age of Wasserma I, of the XVIIII dryn, say the 15th cent. a.c.—In hieroglyphics, the "Land of Omer," (Rosentuss, Ma, vol. III, page 13, page 94, 287, 293, &c.; M.R. LIIII, &c.)

Written with the letter fin of the Arnks, gudin of the Hebrews, not transerhable with our occidental alphabet, and unpronounceable by the generality of Europeans, these Omari have much bewildered ethnologists; because, even in the East, this initial letter, in different provincialisms, partakes of the varied sounds of d, § qd, £d, and it it is hardened into a Q, as gd.

Called Gomeras, one of five original stocks of Berbers, by Marson. (page 60), and by Armanus (page 5), institution to this philological principle has led English writers, first to read the Anous as Gomera, and then to make these Hamilto people descendants of Gomera, (Gen. x., 2), eldest son of Japheth, and thus to find the Indoogermatic Cimiri, Kappapos, Grilla, Libya at the remotest ages! A glance at the Hebrew text indicates the distinction; the former having as initial elogal, the latter a simel.

Genera, probably also feare, is a Canary Island, once inhabited by the Genucles; who are, with much plumidility, conjectured to have been affiliated with the Berbers, these Omeri of Libya.—(Bain, "Atha Etnergaphique," Pl. xviii, and xviii.—Pacusano, "Researches," vol. 1., pages 249, 527;) The name Cenaries, Canarii, is a corruption of Genera, or rather of Genera. These lakes are the "Genuaria extrema" of Procursulo, chat; and the Gelemeritz error one of the principal tibes who valously opposed the Portuguese in the fourteenth and fifteenth centuries: (Barmu-tar, "Guanches," La page 162; II. page 120.)

18.—ZEBARE. Zemour, apud Scuttz. Substituting M for B, as is perfectly legitimate in Oriental philology, we read ZEMARE, and see in them the TsMRI, or Zemarite? (Gen. x., 18.)

19 .- ERKYE; and here we have their fellow Canaanites, the ERKI,

Arkite? (Gen. x., 17.) Eregeiah of Hodoson, (pages 12, 26 @ 31.) Tuaricks? This name is variously written in different MSS.

20.—WESHHOUN — 1 Of these I can make nothing. If this were n a name, (like ratios, sides, &c., ubis impus) given to them, we might in in it the Arabic sedesh, bad, applicable perhaps to their propensities; but more probably the word WAHSH, wild, to indicate possibly the more sendence of the property of the propert

21—SANHADJE. The Sinhappieu of Maxwet and Attracture, one of the original tribes of Sabena Berler. Honosco, (p. 35), any, "how important it would be to show, in the traits of the Senhadyish, the ancient race of Yenen." Fully agreeing with my learned friend, his accuracy in the transcription of Oriental names, insamuch as he spells Schlädgish, where our MS, reads Schladgish, is 'a valid argument in frace of my use of the anagram in the above ENINE, No. 14. "The Berber name ZeNAGhaH was corrupted by the Ambas, as his Makhkin informs us, into SNRHAJAH, pronounced in the West Sinhappak;" (Dessenores Cocarx, "Negroland," pages 2, 16, 66, 27.

22.—KELAN --- ? Khalàn, Ailàn, Varkalàn ?

23.—MENHOUSE — ? Is the province of Houses part of the same? In Copic or Egyptian (a cognate Hamilie tonque,) MAN signifies place, plain, situs; an ancient form still preserved in Egypt in names of village—as MAN-SHEEVEH, the place of the sarrah. The Scaleius of Alexandria that now connects the quandam Isle of Pharos with the main and (aince my residence in Egypt overed with new bosses, Horsheen Pasha's buildings, &c.) used to be called d-manakleynt, the place of the marsh, by the present Anh Alexandrines; being the Copic ball. MANSHEEI, Adopsum, palus: (Parmur, Lexicon, in loc.) such, until 1850, having been its state every winter after the mains. This observation is due to Mr. A. C. Hanus.

24.—ODAIHIN - - -

25.—BASDEZNAN, _ ? Bazdardn, apud Schulz. Asjúnan, Azgúndn ?

Thus, out of twenty-five names of Berber nations left us by Ens-Knatznoon, who at this day inlabil Barbary as they did many centuries ago, ejokr of them have been identified with the names of Connantich ribes, some of whom claim a Hamiltie affiliation viz.: the Stains, Horin, Lobales, Louins, Annuis, Annuis, Ensur, Eris, of Hebrew geography; and the Morre skillth hands, by verification of the MSs. of Ens Knatznoon, and better acquaintance with Oriental history and geography, may continue the work;—one while I deem of exceeding importance to the hierologist in clucidating the still obscure localities and names of Libvan nations extant on the monuments : but baving shown the utility of Arabic in these inquiries, and that it is in Semitic languages we find the most useful implements of analysis, I presume that as some tribes of the Berbers have Canaanitish names, and the language of Canaan was almost identical with Hebrew and Phonician, there is no material objection to my ctymology of the cognomen of the Berbers themselves, B-EREB-BAR, the-Sons-of-the-West: descendants of a primitive migration from Asia into African regions West of Canaan. At a future day and more leisure moment I hope to return with other materials to this interesting subject. [PRICHARD, ("Natural Hist. of Man," 1843; pages 262 @ 265,) sustains that the researches of Newman prove the grammatical construction of Berber tongues to be "a very ancient form of the Semitic or Syro-Arabian languages."-IBID, "Researches," vol. I., pages 241 @ 249; IV., page 587; and Appendix II., by Newman, pages 617 @ 626 .- Newman, "On the Berber Language of Mount Atlas," &c., pages 134, 144; Philological Society, vol. I., 1843.7

In making use, almost interchangeably, of the ethnographical terms Hamitic and Semitic, I am guided by the plausible bypothesis, that these generic names designate two immigrations of Caucasian groups of nations, from an unknown but probably a common source in primitive trans-Eupbratic regions, westwards, first into the "Gezècret el-Arab," Isle of the Arabs or Arabian Peninsula, and thence via Palestine into Africa; -groups of nations, I repeat, divided from each other, rather by long intervals of time between their respective migrations, than through aboriginal diversity of physiological conformation. These principles have been more or less developed in, or can be be deduced from, the works of Lepsius, Morton, Lanci, Bunsen, Kenbick, LENORMANT, and particularly of De Brotonne, ("Civilisation Primitive," Paris, 1845;) but by none have they been made manifest on the scale, or with the immense synthetical co-ordination of my friend, and preceptor in these archaic inquiries, M. Henri Venel, of Geneva, in the MSS, of his gigantic conception, "Chronos:" (see Appendix to tenth @ twelfth editions of "Chapters," Philadelphia, 1846.)

Under this view I have not as yet encountered objections to the arguments of Laser, (*Poratiposens' all 'illustratione' della Segara Scritty, &c., Paris, 1846,) in favour of the remote antiquity and common adoption, among these two originally-cognate familites of mathida, the Hamiltes and Sésenties, of the primeval masculine articles P_i , P_{ij} , P_{ij} , and $Athph A_i$, as well as of the fermine T_i , T_{ij} , D_i (and laces Anglied' whe',) yerfixed or suffixed to pristine monosyllable and bi-grammatical nouns. When any such objections appear, it will be quite time enough to take them into consideration.

In the meanwhile the critical Hebraist, who will consult this profound philologer's disquisitions, can readily satisfy bimself, that, in the remains still extant of ancient *Hebrew* literature,* the archaic particle A is prefixed to

^{*} See Parkea's "De Wette" (Boston, 1843, vol. 1, Appendix A), for the catalogue of the tost books of the Jews. "Lessense enumerates the words that occur in the Hebrew (and Chaldee) Bible, at 5642. In Greek there are about eighty-thousand?" (Gesentus, in Parker's "De Wette," I, 4492.) From this fact we

about forty substantives of the masculine, and to but two of the feminine gender; at the same time that the article T, so familiar to the hierologist, governs above ninety feminine nouns, and scarcely six masculine. The masculine article P, of the Egyptian "sacred tongue," and Coptic, is likewise frequently a component element in Israelitish, as well as in Punic nouns; especially in proper names. I have not, therefore, hesitated to make use of them in the preceding analysis of Canaano-Berber appellatives.*

Nor have I deemed this the place to enter into the exegetical investigation of the Books of the Hehrews; hecause I postpone the inquiry to a more complete treatise upon the ethno-geographical chart contained in the xth Chapter of Genesis, on which I have herein merely submitted a few novel points by anticipation. Even the ordinary reader, divesting himself of the fallacious notion that our present divisions into Chapters and Verses, nav

may judge bow little now remains to us of the ancient tongue of the Israelites; which, as a dialect of the "Ocean" of Arabian idioms, must have been nearly as copious as Arabia; reputed to be the most so of all buman languages; but until Mr. Eb. W. Lans publishes the mighty Lexicon be has been at work upon for years, I cannot hazard a definition of the amount of words in the latter.

books, in distinction from the Chaldee, the popular language, which was called books, in distinction from the Chaldee, the popular haguage, which was called fingua proficar; (page 28:)—"The Hebrew tongue is only one of the members of a large family of languages in Western Asia;" (page 17:—Coxaxr's Genesius, "Hebrew Gramman," 14th ed., New York, 18ch. And. reliverating the doctrine embodied in a quotation from Lance, ("Ethnol. Jour." No. VII., Appendix C;) let me refer the reader to the excellent observations of Watrow, ("Bilhia Volyen) as me year me remet to the excessed conservations of walking. "Billia Foly-glotta," 1657, professment III. page 17,0 or to Kinnicovit, ("The State of the printed Hobrer Tex," Oxt. 1535-9, pages 95, and 298.) See a variety of confirma-tory views in Murix, on the "Inscription Phénicienne de Marseilles;" (Journal Aniatique, Dec., 1847; pages 473, 483, and 526.)

• CAPTIGLIONE, on the authority of VENTURE, asserts that the letter B never enters into words of Berber or Amazing derivation, being softened in oz, or v: (page 110:) which way or w, is considered to be a "degenerate action" by Newman (quad PRICKIARD, vol. IV., page 621.) The particle T, (ILIN, page 622.) prefected or afficied in Berber names, is the universal Hamiltie article; while "the page 622.) The particle of the page 622. prefixed aleph in the Berber language is the sign of case, and may bave other offices: "(W. Dashokoun Cooler, "Negroland," pages 6, 98.)
Now, all these authorities assign an Asiatic origin to Berber tongnes, under dif-

ferent names, Shemitisb, Syro-African, &c. Lanci's nnequalled researches into revus atmost speciation, Sylv-Aircea, or Lancis incipation researches into the ordain articles of Arabian languages amply confirm these linguistical deductions; even to the frequent doubling of the articles, as indicated by Newman, (PARCHARD, V., 622) in the same erroneous manner that Europeans are in the habit of saying "the-Aironn" (Snepting that the word Kur'as already possessed its preh, et the. In end not be remarked, that the absence of the specific sound B in Berber tongues does not affect my etymolgy; for, whilst in Amazirgh dialects we find its equivalent in WA, OU, or W, the name "Western-Men" arga charects we man its equivalent in WA, Ot, or w, the name "western-men may have been given by remote Arabian nations to the primeral Hamitic migration into Barbary. The Egyptian Arabs cannot pronounce, and do not possess the letter P, which they barden into B, as Paikee, for the Ottoman and Persian Paishid; but not on that account is not the old Sahidic article P, or Memphitic PH, extant in bundreds of names of modern Nilotic topography.

sometimes into words, 'are anything but arbitrary and modern, can perceive, that the specification of the TOLDYTA BeXI-NosH, the descendants of the rosm of Nosh, otherwise the 4th Chapter of Genesia, breaks in parenthetically between the cond of the 1th and the 5th Chapter of the 1th and the 1th the 1th Chapter of the 1th and the 1th the 1t

Verses 1 to 6, of the succeeding Chapter Xi, describe makind as possessed of "on speech," confunedd, in verser 7, 8, 0, after the exection of the city of Bubel, (confusion; also the name of Babyloo, Bas-Ex, Citically "gas for the Sum," as we any now the "Subhime Porte" of the Ottoman, or "celential gates" of Chinece autoemcry.) But in the xch Cottoman, or "celential gates" of Chinece autoemcry.) But in the xch Cottoman, or "celential gates" of Chinece autoemcry.) But in the xch Cottomar, or "celential gates" of Chinece autoemcry.) Ready divided according to their respective sogness, LaSoN, are proof that this Chapter x. the contraction of the confusion of the c

We are moreover told (Gen. xii., 6,) parenthetically, that "the Canaanite (was) then in the land," of Palestine; which establishes, that the displacements that eventually earried many of the Canaanitish tribes into Barhary, or Berberia, (thi supra,) had not occurred in Arraham's day. But we read

^{*} Ex. g. "Teled-cain, (Gen. iv. 22), who sharpened various tools in copperation of our termino, here following SALELO, has "an intrasteut of every article in brass and iron." In the Text, masorwise, this name is now similarly divided, but in the oldest Heckew MSs. or Synapspure rolls, (none extant earlier than, and the state of the state

The division into wood is a compensatively modern improvement. In consequence when examining a name which, as it stands in the prisaid copies, presents us with no definite analogy, archeological criticism has a perfect right to restore the word its anticest state, and to replace the letter close together: CCL Knewstever, Table-cain thereby becomes again TAUBLKIN. I suggest its division into TAU BLKIN. In the first word we have the exact constrepts of the Arabic

The deficient thereby becomes again TAUBLKIN. I suggest its division into TAUBLKIN. I suggest its division into TAUBLKIN. I suggest its division into TAUL, ILLI, silas ZU, mensing a God, as in Disk'Accession, the "God with the two horns," (Authoreth Karnasin of Int Sam. xxxi. 10; Jerom. 44, 19, &c.) or as in Disk'Accession the "God of Nym," Nymens, Accessory; both names of the sin Disk'Accession the "God of Nym," Nymens, Accessory; both names of the control of the "God of Nym," Nymens, Accession of the "God of Nym, "Nymens, Accession of the "God of Nymens," the "God of Nymens," the "God of Nymens," the electrical labels, which is also now. The Variation, the God village, "The electrical labels, which is dealed from the primitive Egyptica philosophical conception of Palos, the demionrage, or arises.

This may appear to the reader a mere hap-based confidence. It is a poor

Anis may appear to the reader a mere map-master contentative. It is a poor rule which cannot support itself by numerous examples; and having collected many such, I defer their production to another occasion.

(Chapter x. 18,) that "afterwards the families of the Chapter were spread (abroad):" which proves that, when the xth Chapter of Genesis was written, these displacements had already taken place.

Now from Numbers xxxiv. we gather that, in the days of Moses, (say the fifteenth century B.C.) the Canaanites had not been vet expelled : ergo the xth Chapter of Genesis, which already speaks of their displacement as a past event, (v. 18.) was written after Israel had subjugated Palestine. But the hosts of Israel did not conquer Palestine, nor expel any Canaanites, until the times of Joshua; and therefore the xth Chapter of Genesis was written after Joshua's day. It is not then a document compiled at the anterior Mosaic epoch. Its position is an nanchronism where it now stands, parenthetically, between the ixth and the xith Chapters of Genesis; and it exhibits the state of Palestine, as it had been previously to the expulsion of the Canaanites. Its probable age of composition will be discussed, inasmuch as the elucidation requires a different course of argument, in extenso at a future day. Meanwhile the reader may consult the still more recent books, (Judges i. 21, 28 :- 1st Sam. vii. 14: - 2nd Sam. xxiv. 7: - 1st Kings, ix, 20, 21; " unto this day :"-2nd Kings, viii, 6 :- Esra, ix, 1, 2 :) to observe, that all the families of the Canaanite not having been expelled, nor subjugated, even in times subsequent to the return from the Captivity, say the sixth century s.c., when their relies merged into the new Hebrew community, we cannot expect to find all of their ancient cognomina among the traditionary patronymes of the Berbers of Libya.

The present pages have extended far beyond the limits presenbed to myself when I began this Excussurs; and yet, in connection with the importance of Arabic to the hierologist, in re-constructing the geography of the inhabitants of the Nobikas and the Typer Nile, in the days of the silva at xiilth dynasties, or between 3,000 and 4,200 years ago, I wish to advert to one method of restoration of peculiar moment and utility.

Six years back, (Loctures, 1842; Chapters, 1843, page 44.) I advanced the opinion, "that the Phamonic Governments were better acquainted with Nigritia 3,500 years ago, than any geographers of modern times, who have gone little beyond the legendary fragments bequeathed to us, 2,000 years ago, by Entosthence,

The researches of the enterprising and learned traveller Dr. Brax* have unfolded over and most important view upon the Southern extension of the various streams that unite to compose the Bahr-el-Abbad; at the same time that the invaluable investigations of Mr. Binen into the theorylybidical names of African tribes, extant upon the monaments, are calculated to confirm the opinion above quoted on the geographical knowledge of the hierogrammatists.

⁷ As developed in a memoir read before the Spre-Egyptian Society I. London, 50 Jan. 1891. 3 and alone published in the Literary Gaster, 20th Jan. 1891. 3 see July 1891. 3 between the Literary Gaster, 20th Jan. 1891. 3 between Line and Literary Literary 1891. 3 between Li

In a paper on the African captives of Astronors III., 4th year, recorded at Solde in Nulhi, and on the podestal of this hing's statue at Pais, if "Archanologia," vol. xiz. pages 489—491; Mr. Busen made the following critical observation:—"In the syllable PA is apparently, from its repetition in several names, an Æthiopie form: and the word TAHM, or TAHM, commencing the appellative of several tribes, seems a genuine Æthiopie term:"
—"page 401, note a. Thus; Teru-teru, or Ter-ter; [Wuxurson, Mat. Her. Supp. viii, 23:] Teru-Rom 2 [Inn. 20:] Teru-Rom 2; [Inn. 20:] Teru-Ro

The perusal of Mr. Baner's paper suggested to me, in 1946, the probability that (T and D), no less than L and R, being interchangeable in the phonetic system of Egyptian hierogrammatists, if we read the Arabice "Dat," Journ, or Tal, we should find the generic prefix which is still current among Nulan population; as in the names Dat-Fore, Dat-Hoffpon, Soc. I instanced the Dat-d-Mohas as the present timbar representative of the people annead, at Aboosimhel, in the legend, "discourse of Horus, Lord of the Made-country, (Rosexiava, Mon. Stor., vol. iii, part ii, page 170; Pl. MR. 7, fg. 2; i) neocurrentions with Mr. Butes, and in correspondence with A. A. C. Haans, of Alexandria, relative to the Tables of the age of Struss-Massura, L. discovered by him at Debin in Nulsi in Dec., 1845; I'clima. R. Soc. of Literature, vol. i., No. 16, 28th June, 1846—photographed by the countrey of Mr. H. For Tanson.

The absence of correct Mays of Nubia, specifying with accument the smars and topographical positions of the multiform three inhabiting is wise superficies suspended further inquiries; but the reception of Reuseoma's aphendic Kate ve on Ox-Sudan, "18GA, having recently recalled the subject, I have no doubt that among the immunerable "Dian" therein presented, Mr. Buren's childrid eye will recognize many African antions of Plansonic annals; at skilled eye will recognize many African antions of Plansonic annals; at skilled eye will recognize many them are the probability, that the great Austral Leig. (Nilotic regions may channe the probability, that the great Austral Leig. (Nilotic regions may channed the probability, that the great Austral Leig. (Nilotic regions may channed which have reached him from various native sources, may be the "great Leige," which the Planson's of the xvilled dynasty wished in their remote Nigritian expeditions.

Finally, that the student of Nuhian, Soothalan, and Austro-Libyran chinography, may becouvined, that there are materials through which Reynan hirogylphies can be made to shed new and immense light, where herein force all has been exceleped, like the yet-anknows sources of the Nile like in gloom, fable, and uncertainty, I append a list of Nr. Banovi readings of some some of nations south of Egypt, extant on the monuments of the sirt, and a viith dynasties: whose epochs range, between the twenty-third and and the fourteenth centuries, as.

Most, I may say, of these family nonenclatures have been already identified, by the same crudite palsographer, with classical geography. Some of the coincidences, between these cognomina and those visible in modern maps, (the Baranasa, or Berbers; the TEXEUR, or Datroorians;) have been pointed out by RoseLLMN, GRANCIANS, and others. But time and space permit, I could at once indicate a few more analogies; but without presenting the kierogiphics, which are susceptible of various modifications in English tenseription, and accompanying them with a map containing simultaneously the monumental, classical, Arahian, and modern appellatives, the labor would possess little practical utility.

In the hope that, in the interim, the achievement of this grand desideratum will be undertaken by those whose positions, qualifications, and ampler facilities, ensure greater prospects of success, I must be content to postpone the public resumption of my own inquiries into these most interesting branches of ethnological science to a future opportunity.

APPENDIX J.

The Relatetor of SCRILL's translation of the "Bistory of the Berbern," (Journal Antisipus, 1888, Tom. II, note, page 181), as well as Contractions, ("Recherches are less Berbères Athatiques of Mina, 1886; pages 83, 84.) coincides with and the state of the state of

years before Herodovus. Consequently, it is no longer possible to defend the doctrine that the indigenous and antique term *Berber* was introduced into Africa by modern and exotic Europeans.

In fact, whether the Bardlera families of the Upper Nile be affiliated with the Barders of Lilys, or not, and there are ponderous testimonies on both dies of the question, if we start in our inquiries from this very hour, we shall find that some form of the root Reber he has been applied by all autions to parts of Nulsi and Lilys, a testimate of the start of the Reber has been applied by all autions to parts of Nulsi and Lilys, a testimate of the Reber has the start of the Reber has the Reb

- 1st.—All the Arab historians use the name Berber, and nply it to Libynas and Nubins, without suspecting the word to be Greek or Roman; nor would it have comperted with Muslim propriety to designate a Mohammedan people by a Prans and Nazarere name had they known it to be provided by a Prans and Nazarere name had they known it to be provided by a pransity of the propriety of t
- rad.—In the fifth and sixth centaries a.n. the constries sonth of Egypt, or the Nulsia, are called Barberia by Stratarson Stratarstons, and Consans Institutoria. Stratage and Stratarstons, and Carles and Barberia in song Janifes with the Common of the African Charch, and Barberia smong Latin writers. The well-known five Tribes of Lidyan Berbera are termed by the Romans "Quinapequentain Barbari," hack to the fourth century A.D. (See the authorities in Castrollouse, "Berbères Atlantiques," pages 88, 100, 101.)

Süll retroeding, we seconsire the same Revér in the "Darbrices Sinux," and "Arbora's of Textuart via Goographer, (f.ih. 1V., eq. 8, "The 4: a phirties" ed. Room, 1668;)) bested in the same vicinities where the entropt of Borberch, and Room 1668;)) bested in the same vicinities where the entropt of Borberch, and Company of the Compa

srd.—Τi the name Barbari, βαηβάρο, meant simply burbarous or barbariaries and onling more, why should Frukturi give the names "Barbariaries Sinus," and "Barbari" to African places and countries where we find Barbaria to the Indian Ocean, Barbar the capital of Nhaib, the effect of the state of the Barbarian similariation of the Barbarian Barbar tirles at this day, no less than the nations could BRUEL Barbarden, in hierophythics 2010 pers may 2 part 2, page 85.) Prox.axv, to be consistent, if he intended the despreciantly term barbarian, would scarely have restricted its application to Barbar countries above Egypt when the whole of Africa and Asia, not actually occupied by Roman lagions, equally deserved the name?

Having thus established the historical antiquity of the name Berber, it seems to me that, if the Greeks and Romans never alluded to the proper name of this most important, and best known to them, of families on the African continent, the onus probandi" ought now to lie on the adverse side of the discussion.—G.R.G.

POSTNORIPTUM.

THE subject of Slavery, one that has been perpetually before me in the Levant and in the West, displayed among most human races, and in all its forms—a theme upon which every body writes, and with the elementary as well as philosophical story of which so few are sequainted, -will receive development hereafter; when leisure admits of my arranging the materials collected during twenty-five years of personal observation. Meanwhile, a remark of LAYARD suggests the following commentary, in which the general reader may perhaps find some novel matter. It is said by this distinguished Orientalist,—" that Eugusts were also an object of trade, and were brought, as at this day, from the centre of Africa, we learn from Jeremiah xxxviii, 7th;" ("Nineveh," vol. IL, note, page 325.)

With regret I must controvert the whole of this assertion, beyond the fact that

Eunuchs may have been anciently "an object of trade."

In no part of the Helmer Scriptures are Negor races, nor is central Africa alluded to; the Greek word "Æthiopis," heing a false translation of the Helmer "Cush." In this passage of Jeremiah we read that, ABeD-McLeK was a Cushite; that is, an Arabian, and consequently a white-man, or Caucasian; not an African, for less a Negro. His cognomen, literally Slave-of-the-King, is a proper name; like ABI-MELEK, AIII-MELEK, among the ancient isrselites, or And-ALLAN, Slave-of-God," among the Muslims of our day. AISA SaRIS, homo castratus, declares his

ABD-MELEE, probably a Hebrew Slave (sanctioned by Mosaic institutions, Exod. xxi., 26; Levit. xxv., 39-44; Dent xv., 12-18;) as well as an Eunuch, was an emasculated whiteman; exactly similar to those so admirably portrayed in the Assyrian sculptures we owe to Botta, ("Lettres de Khorsabšd," 1845;) and to Layard, vol. II., pages 468, 469, &c. ;) no less than to Flandin, ("Monument de Ninive ;" Pl. 18, 19, 22, 121, 129, 138, &c.) These SaRISim, Emuchs, were constantly attendants upon Jewish, (1st Sam. viii., 15; 1st Kings, xxii, 9; 2nd Kings, xxiv., 12, 15; dants upon Jeneid, (1st Sam. viii., 15; 1st Kings, xxii; 9; 2nd Kungs, xxiv., 12, 10; xxv., 19; 1) as well son Chaldrann soereigns; (2nd Kings xxii; 17; Esther, 1, 10; 12; 16; Jeremiah, xxxix, 3; Daniel, 1; 3; &c.) Our unfaithful translators have softened the aspecties of the original, by mildly redeering these Saft Siza, as if they were merely officers, charakerisms I Mosale laws forbade not the manufacture, but simply excluded Ennuels from the congregation; (Deut. xxii; 1,16 for which, in

after times, prophetic humanity offered spiritual compensation: (Isaiah Ivi., 3. 5.)

By the LXX. the term SaRIS is rendered guyouxoc; with hut two exceptions, when its substitute is gradur. The derivation of the word Eunuch is εννην εχει-lecti curam habet-or "custodian of the hed." Great respect was often paid to them anciently, owing to their familiar access to the privacy of magnates, in the same manner as is lamentably customary throughout the modern Ottoman empire. Thus Herodotus informs us, that in Persia, Eunuchs were promoted to the highest honors; a statement that derives curious confirmation from hieroglyphical discoveries; for, on the Tahlets of the Persian epoch on the Cosseyr road, Mr. Birch reads "SaRiS (en) Phare"-the Eunuch of Persia-as the title of the dignitaries who there record their consecutive passage: (Burton's Excerpta; Pl. VIII., and Pl. XIV., fig. 2, 3.) And hesides abundant later instances, it is notorious that Basons exerted great influence over ALEXANDER; another of the same name (or title?) over ARTAXERXES OCHUS ; Menophiles over MITHRIDATES ; Photinus over the last PTOLEMY; Phileteres over LYSHMACHUS; Sporas over Nero; &c., &c. Even ARISTOTLE paid const to Hermins; and Narses was a General in the Byantian army. Yet earlier Roman law had deprived Eunnehs of the power of bearing witness, and holding office.

The existence of white Eunnehs being thus established in Enrope, Paleetine, Assyria, Asia Minor, and Persia, if we turn to Egypt, an incident in Joseph's remarkable life finds easy solution in the fact, that POTIPHAR himself was the "Eunuch of Pharaoh," SaRIS PARAH: (Gen. xxxvii., 36; xxxix, 1.) The philologist cannot avoid this textual dilemma; for SaRIS, cognate with the Arabic SalteS, castrutic, and Persian SaltiS, impotens, means Ennach and nothing else.
At this day it is not unusual for opulent Ennuchs in the East to possess Harcens.
That the Pharaonic Engylainas, from very early times, manufactured Ennuchs is attested by Manerho, (Cont., page 110;) who speaks of their assassination of Ane-

MEMES of the mith. dyn., as if these equivocal creatures had long been common white the other value, or in one engineer creation are good and continued with certainty, but not continued with certainty, be pointed out on the monuments as for hack at least as times prior to Henri of the xviith dyn.; asy the statement enginy n.c.: (Tond of Quorateries up, Autoremounts) (agreed of the Epppidess who attend the Significan services up, Autoremounts) (agreed of the Epppidess who attend the Significan services up of the Epppidess of the Epppidess who attend the Significan (1) of the Eppidess of the Epppidess of the Epppidess of the Epppidess of the Eppidess of the Epppidess of th and in physical characteristics are strictly Egyptians and Caucasians; (Morron, "Crania Ægyptisca," Conclusions, page 66 :) and there is not a single Negro or

Arisan Jessel to be found on the measurest of the Nile.

If we turn to the Mongolian families it becomes critical, that of all countries, save the modern Ottoman Empire, Clinics has suffered the severest retribution for permitting an attrocity that recels with terrific vengences on the braid of its perportators: (Farrinzs, "Chine," pages 285, 326, 330, 335, 464, 465, 434.) Yet the myridad of Euseka's in the Cleistin Empire were Chinemen, never Reprotes any more than were the 20,000 unhappy wretches whom Tavennien tells us were

yearly manufactured in Boutan.

I am unable to aver that Euruchs are depicted on Etruscan remains ; but, until I am mande to aver than customs are corpected on Estructure remains; incu, man-the xixth century, a.D., Roman orthodoxy has delighted in the sacred melodite of Italian Musici: while to Naples is particularly ascribed the latest practice of this euphonizing art: nor is it necessary to remake Church History for individual Christian corroborations of Matthew, xix, 12. The Council of Nice forbade the admission of Eunuchs into holy orders; hat the Vaalesians were a Christian sect in the 3rd century, and report attributes a similar idiosyncrasy to present times in Russia.

Now, in all the nations above enumerated, there is not a solitary instance of a Nigritian Eurach, nor of any such ancient trade with central Africa. Alas! the vile institution is Assatic in its origin; and the curse may well lie upon the grave of Semiramis: (LAYARD, II., page 325.) African Eunnehs belong to modern, not to ancient history.

Here I must pause. The reader need not be told, that thousands of Circussian, Georgian, Greek, Nestorian, and other varieties of white Eunuchs, besides Ahyssinians, Negroes, and similar African Castrati, Towashee, throng the Hareems of the Turk; for whom hundreds are still manufactured yearly in Asia and Africa; in which last country above Egypt, hat one in toward survive the horrible system of operation.—Q. E. D.

When it was politically expedient to pet the individual ambitions and fan the cant of "Exeter Hall," through the niaiseries of which the dreadful abominations of the Atlantic slave-trade have in these last four years been multiplied tenfold, time audantic sarve—time in the in time said our years beets muniquies sented, while the attention of British philanthropy is destrocally withdraws from the Medi-terranean, Black See, and hinde carrava slave-trade of male and female shintle and Nigritimus, to waste itself in mawkish sentimentalities derided in the United States,) an "Imperial Firmant" was "got up" at Constantinople, on the 13th Feb. 1841, "addressed to Montanton Aut, conferring upon him the Government of Nuhia, Darfoor, (why not have added that of the moon, for this satellite is equally accessible to Egyptian armies?) Kordofan, and Sennaar, and enjoining him to aholish the Negro-hunts," &c. It moreover added, "this custom, as well as that of reducing some of the said captives to the condition of Euguchs, is in all respects contrary to my Imperial will." (1 Did the Sultan abolish his own Euroche's has there been one African slave less in Turkey?)

I was at Cairo when this deplorably-European document arrived to be scorned by the Pasha, and laughed at by the Muslimeen. A few days later came a new Firman, superseding the former, agreed to by the Allies, and ratified by the Vice-roy. Not a syllatle was said therein shout Siare-hout, or Ecuards. ("Parliamen-tary Papers: "Affairs of the Levent;" Session, 19th Aug. to 7th Oct. 1841; vol. viii.—Compare pages 250, 251, with pages 438 to 484.)—March, 1849.—G.R.G.
